## CLINICAL PHARMACOLOGY AND BIOPHARMACEUTICS NDA REVIEW

**NDA number, type:** NDA 21-344, 1S

**Brand name:** FASLODEX<sup>®</sup> Injection

**Generic name:** fulvestrant

**Type of dosage form and strength(s):** pre-filled syringes, 2.5 ml (125 mg) and 5 ml (250 mg)

**Indication(s):** FASLODEX is indicated for the

DRAFT

**Applicant name:** AstraZeneca Pharmaceuticals, LP

**Submission (letter date):** initial (March 28, 2001)

BB (November 13, 2001)

C (December 31, 2001)

BB (January 30, 2002)

**OCPB and ORM Division names:** Division of Pharmaceutical Evaluation 1 and  
Division of Oncologic Drug Products

**OCPB Reviewer(s) and Team Leader names:** Gene Williams, Ph.D. and N.A.M.  
Rahman, Ph.D.

**Type of Submission:** New Drug Application (NME)

---

### *I. Executive Summary*

#### **A. Recommendations**

The Clinical Pharmacology and Biopharmaceutics portion of this NDA is acceptable. No new risk management recommendations have resulted from this review.

#### **B. Phase 4 commitments**

A single Phase 4 commitments is recommended. We recommend that the Applicant perform a study of the effect of ketoconazole on fulvestrant pharmacokinetics. For ease, to allow for fewer patients (the IV route has less inter-individual variability than the IM route) and to increase safety during performance of the study, we recommend that this study be conducted using the intravenous formulation of fulvestrant.

## **II. Table of Contents**

<i>I. Executive Summary</i>	
<i>A. Recommendations</i>	<i>1</i>
<i>B. Phase 4 Commitments</i>	<i>1</i>
<i>II. Table of Contents</i>	<i>2</i>
<i>Glossary</i>	<i>3</i>
<i>III. Summary of Clinical Pharmacology and Biopharmaceutics Findings</i>	<i>4</i>
<i>IV. Question Based Review</i>	
<i>A. General Attributes</i>	<i>7</i>
<i>B. General Clinical Pharmacology</i>	<i>7</i>
<i>C. Intrinsic Factors</i>	<i>14</i>
<i>D. Extrinsic Factors</i>	<i>19</i>
<i>E. General Biopharmaceutics</i>	<i>24</i>
<i>F. Analytical Section</i>	<i>25</i>
<i>V. Detailed Labeling Recommendations</i>	<i>28</i>
<i>VI. Appendices</i>	
<i>A. Proposed Package Insert</i>	<i>39</i>
<i>B. Individual Study Review (Applicant's Study Synopses)</i>	<i>58</i>
<i>C. Consult Review (including Pharmacometric Reviews)</i>	<i>NA</i>
<i>D. Cover Sheet and OCPB Filing/Review Form</i>	<i>136</i>
<i>E. Applicant's Individual Analytical Methods Summaries</i>	<i>139</i>

## ***Glossary***

$^{14}\text{C}$  – radioactive carbon (molecular weight = 14)  
AUC – area under the concentration versus time curve  
Cl -- clearance  
Cmax – maximum concentration  
Cmin – minimum concentration: the concentration just prior to the next dose  
Ctrough – minimum concentration: the concentration just prior to the next dose  
CV – coefficient of variation  
CYP – cytochrome P450  
ER – estrogen receptor  
FSH – follicle stimulating hormone  
Gmean – geometric mean  
HDL – high-density lipoprotein  
IM – intra-muscular  
*in vitro* – not in humans or animals  
*in vivo* – in humans or animals  
IV – intra-venous  
kg – kilogram  
L – liter  
LA – long-acting  
LDL – low-density lipoprotein  
LH – lutenizing hormone  
mg – milligram  
min – minute(s)  
ml – milliliter  
NDA – New Drug Application  
NME – new molecular entity (a molecule not previously approved as a human drug)  
OCPB – Office of Clinical Pharmacology and Biopharmaceutics  
P450 – cytochrome P450  
PD – pharmacodynamic(s); a measure of drug effect  
PgR – progesterone receptor  
Phase 4 – the post-approval stage of drug development  
PK – pharmacokinetic(s)  
PK/PD – relating concentration (PK) to effect (PD)  
POSTHOC – an analysis option within the NONMEM software program  
Q – once every  
SA – short-acting  
Tmax – time at which maximum concentration (Cmax) is reached or was measured  
V – volume of distribution  
Vd – volume of distribution of the central compartment  
VLDL – very-low-density lipoprotein  
Vss – steady-state volume of distribution  
 $\mu\text{M}$  – micromolar or micromoles

### **III. Summary of Clinical Pharmacology and Biopharmaceutics Findings**

*In vivo* and *in vitro* data support the following conclusions:

- In clinical use, drug exposure is controlled by the properties of the LA IM injection
  - the ratio of C<sub>max</sub> to C<sub>trough</sub> for a 5 ml IM injection and a 28-day inter-dose interval is approximately 2.5.
  - On a Q 28-day regimen, levels approach approximate steady-state after 3 doses.
  - the pharmacokinetics of fulvestrant 250 mg were shown to be similar when administered as either a single 5-ml or as two 2.5-ml injections.
  - no clear relationship has been established between efficacy measurements (time to progression, objective response) and pharmacokinetic parameters such as C<sub>max</sub>, C<sub>min</sub>, AUC, and clearance.
- The general pharmacokinetics are:
  - fulvestrant is rapidly distributed following administration by IV infusion, with plasma concentrations decreasing rapidly in a multiexponential fashion. Estimates of mean terminal elimination half-lives range from approximately 14.0 to 18.5 hours.
  - fulvestrant is rapidly cleared (>10 ml/min/kg) and renal elimination is low (i.e. <1%).
  - fulvestrant is extensively metabolized.
- No meaningful differences in the pharmacokinetics are apparent between male and either pre- or postmenopausal female subjects following administration of a single IV dose, nor between male and postmenopausal female subjects following IM administration (irrespective of age).
- Fulvestrant has been shown to be highly bound (99%) to plasma proteins (predominantly lipoproteins) and to have a large steady-state volume of distribution (approximately 3 to 5 L/kg), which suggests that the distribution of the compound is largely extravascular.
- Preclinical studies with human cytochrome P450 isoenzymes and results from clinical pharmacokinetic trials involving the co-administration of fulvestrant with midazolam or rifampin suggest that

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
