#### **DETAILED ACTION**

### **Specification**

The abstract of the disclosure is objected to because the abstract should be generally limited to a single paragraph on a separate sheet within the range of **50 to 150 words**.

Correction is required. See MPEP § 608.01(b).

### **Double Patenting**

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims *1-12* are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over *claims 3-6, and 33-43* of U.S. Patent No. *6,602,191*.

Although the conflicting claims are not identical, they are not patentably distinct from each other

because it would have been obvious to one of ordinary skill in the art at the time of the invention

to implement the method of the patent in the manner set forth in the instant application since the

claims of the instant application are merely different renditions of the patented method and

computer readable medium.

The Applicant is invited to explain, to make the record clear, reasons that the double

patenting rejection does not apply.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the

subject matter which the applicant regards as his invention.

Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite

for failing to particularly point out and distinctly claim the subject matter which applicant

regards as the invention.

The examiner cannot discern based on the specification the distinction between

physiological data and exercise data. In fact, often times the two overlap. For example, heart

rate could be "physiological data" and "exercise data". The broadest reasonable limitation of

both terms cannot be discerned and as such the terms are indefinite.

The Applicant is invited to explain, to make the record clear, reasons that the rejection

under 35 U.S.C. 112, second paragraph does not apply.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Brown US Patent Number 5,997,476.

Brown teaches the use of a remote apparatus (26/28) with a communication network (24, Internet) workstation (20) to remotely monitor a patient/user, (figure 1). The remote apparatus is disclosed as being on a cellular/wireless network, i.e. a cellular/wireless phone (column 4, lines 36-63). The remote apparatus includes many different types of monitoring devices including weight scales and heart rate/pulse rate (column 5, lines 3-6) with an RS-232 connection (column 6, lines 44-46). Brown's remote apparatus further includes a keyboard/buttons to input data regarding how people feel (see fig. 7).

The Applicant is invited to request an interview to discuss suggestions to overcome the applied prior art.
