Sky Advanced Threat Prevention Scanned File Overview

Sky ATP keeps a record of all file metadata sent to the cloud for inspection. You can view the files sent from your network by selecting Monitor > File Scanning in the Web UI. See Figure 1. Your firewall policy determines what to do if a file is suspected of being malware. For example, block that file from being downloaded to the client.

Figure 1: List of Inspected Files and Their Results

File Signature	Threat Level	Filename	Last Submitted	URL	Malware Name	Category	Status
