I. INTRODUCTION

Plaintiff Finjan, Inc.'s ("Finjan's") patent campaign against the network security industry has taken a heavy toll on Finjan's patent portfolio. Each of the patents currently asserted against Juniper Networks, Inc. ("Juniper") has been the subject of multiple reexamination or *inter partes* review proceedings, during which Finjan made numerous concessions to save its patents. Now that Finjan is trying to establish an infringement case against Juniper, it attempts to retreat from statements it made to the USPTO and PTAB. This it cannot do; having conceded that its patents are limited to preserve their validity, Finjan cannot now recapture the claim scope it surrendered.

In addition, Finjan's claim that it is merely trying to use the "plain meaning" of many patent terms is false. In many cases, Finjan's proposed "plain meaning" ignores the actual, plain language of the claims, the express goals of the patents, pertinent portions of the specification, and the relevant prosecution history (including post-grant proceedings). *See Evolutionary Intelligence, LLC v. Sprint Nextel Corp.*, 2014 WL 4802426, at *4 (N.D. Cal. Sept. 26, 2014) (IPR proceedings are "an important part of the intrinsic record."). Finjan also improperly cherry-picks favorable constructions from past district court orders, while ignoring those that support Juniper's proposed constructions.

Juniper's constructions, on the other hand, are consistent with—and in some instances identical—to the constructions applied by the USPTO and PTAB. Perhaps most importantly, Juniper's constructions accurately define what is actually taught in the patents as the purpose of the inventions, as expressed in the specifications and prosecution histories—which is precisely what the Federal Circuit has held claim constructions are supposed to do.

II. THE '633 PATENT

The '633 Patent is directed to a system that (1) determines whether an incoming file contains executable code, and if so, (2) sends code to the client computer that will protect that computer by running the file in a "sandbox" on the end user's device. This approach facilitates load balancing by conducting the resource-intensive dynamic analysis at the client computers instead of at the gateway. Ex. 1 ('633 Patent) at 1:48-50, 2:14-16. Exemplary Claim 1 recites a computer processor-based method, comprising:

receiving, by a computer, downloadable-information;

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time** alerts and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
