15 FINJAN, INC., a Delaware Corporation,

16 Plaintiff,

17 v.

18 JUNIPER NETWORKS, INC., a Delaware  
19 Corporation,

20 Defendant.

Case No.: 3:17-cv-05659-WHA

**EXPERT REPORT OF DR. ERIC COLE**

**HIGHLY CONFIDENTIAL – SOURCE CODE**

1 ATP further stores the results in, for example, the ResultsDB. The databases include database schemas  
2 to organize the data and serve one or more other applications.

3 30. This system provides a number of technical benefits for the customers of Juniper. By  
4 collecting profiles in database, intelligence is gathered and distributed across the entire Juniper network  
5 and allows customers to proactively block threats and reduce samples that lead to false positives. This  
6 allows Juniper and its customers to respond to the most potentially destructive threats while also  
7 reducing costs. Additional evidence of the importance of this technology is the fact that Juniper has  
8 devoted additional resources to increase its use. In fact, Juniper made a strategic decision to purchase  
9 Cyphort to strengthen its focus in this area. Thus, the increased use of this technology demonstrates that  
10 it is an important technology for Juniper and its customers.  
11

12 31. Moreover, the technology provides many benefits for the customers of Juniper,  
13 including accuracy as having a database of the results that allows Juniper and its customers to more  
14 accurately identify and neutralize malware designed to evade detection technology.  
15

16 32. Users of this system will also see an increase in speed and efficiency because once the  
17 system generates a profile for a given Web page it does not have to undergo this operation again.  
18 Instead, the system can retrieve the stored DSP from the database. This saves on computation time for  
19 having to reanalyze the downloadable via Sky ATP, but also on bandwidth because the system does not  
20 have to send the downloadable to Sky ATP to re-analyze it if the downloadable was already scanned.  
21

22 33. Furthermore, the SRX Gateways and Sky ATP allow customers better protection as  
23 malware can be stopped before it reaches the file system of the client computer. This is because the  
24 Internet poses additional security threats, as such content may execute upon entry into a client  
25 computer. Content such as JavaScript and VBScript may be executed by an Internet browser, as soon as  
26 the content is received within a web page. This technology allows the malware you identify to be  
27 blocked at the gateway.  
28

1           34.       This technology also provides many benefits for Juniper. For example, integrating the  
2 data resulting from the Sky ATP analysis allows this data to be used for Juniper research and analysis of  
3 the threat picture which can be fed into the Juniper network. It is important for Juniper to have a  
4 continuously updated threat picture because it is must be able to defend and protect its customers. The  
5 integration of cloud technology that stores results of the sandboxing analysis reduces total cost of  
6 security for the customer and allows them to more effectively block threats. It also dramatically reduces  
7 advanced threat payloads resulting in lower capacity and capital costs required for malware inspection  
8 using sandboxing solutions.  
9

10           35.       Juniper's Sky ATP includes sandboxing that is used to identify the "zero day threats"  
11 that are seen. FINJAN-JN 005438 at 5439 ("Patent pipeline of technologies to analyze sophisticated  
12 malware, "detonate" files in a controlled sandboxing environment, and identify zero day threats.").  
13 Based on Juniper's documentation, I understand that it takes approximately 6-7 minutes for the Sky  
14 ATP sandbox to perform its analysis on a suspect file. FINJAN-JN 044844; FINJAN-JN044744 at  
15 4763-764 ("The majority of the time spent inspecting a file is in dynamic analysis ... The file is  
16 uploaded to this environment and is allowed to run for several minutes.").

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
