DETAILED ACTION

Response to Arguments

1. The examiner hereby withdraws the objection to the specification in light of the applicant's amendment overcoming the objection.
2. Applicant's arguments filed have been fully considered but they are not persuasive.

It is asserted by the applicant that Ji fails to disclose of file cache, let alone any type of cache, and additionally fail to disclose of any type of security profile.

The examiner disagrees with the applicant's assertion. The examiner agrees that Ji fails to disclose of the term "cache" and "profile", however the applicant has failed to further limit what constitutes these terms. Ji discloses of a monitoring package which is part of a scanner that checks applets to determine if the applets are in violation of a security check, see column 3, lines 16-44. It is inherent that the files are temporarily stored in the scanner since the files are interpreted by the scanner for malicious content. For any type of processing, content is temporarily stored in a cache, or buffer, prior to being read and interpreted by the processor. Ji additionally discloses of creation of a report, which is equated to the claimed "profile", that indicates violation of a security policy, see column 3, lines 40-44 and column 5, lines 45-50. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., cache and profile) are not recited in the rejected claims. Although the claims are interpreted in light of the

specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-45 are rejected under 35 U.S.C. 102(b) as being anticipated by Ji, U.S. Patent 5,983,348.

As per claim 1, it is taught by Ji of a computer gateway for an intranet of computers, comprising a scanner for scanning incoming files from the Internet and deriving security profiles therefor, and the security profiles being lists of computer commands that the files are programmed to perform; a file cache for storing files scanned by the scanner; a security profile cache for storing security profiles for files; and a security policy cache for storing security policies for intranet computers within an intranet, the security policies including a list of restrictions for files that are transmitted to intranet computers (col. 3, lines 7-9 & 16-44). It is inherent that the files are temporarily stored in the scanner since the files are interpreted by the scanner for malicious
