DATASHEET

Overview

REQUEST A QUOTE

Contrail Security minimizes risk to the applications that run in multi-cloud environments. It discovers application traffic flows and drastically reduces policy proliferation across different environments. With Contrail Security, you define policies once and automatically distribute them uniformly across all deployments. You can also use it for easy monitoring and troubleshooting of inter- and intra-application traffic flows.

HOW TO BUY

Contrail Security actively defends your network at multiple enforcement points. An integrated virtual router (vRouter) acts as a distributed element on every host where applications reside, providing security enforcement and redirecting suspicious traffic to next-generation virtual firewalls as needed.

Contrail Security offers enterprises and SaaS providers the following advantages:

Consistent Intent-Driven Policy
Contrail Security streamlines policy creation by enabling administrators to define intent. Administrators can use simple terms that enable smart microsegmentation across diverse cloud environments such as OpenStack, Kubernetes, bare metal servers, and public clouds.

Multiple Enforcement Points
Contrail Security leverages distributed security and networking policies to orchestrate defense and protect applications from threats. For more comprehensive defense, Contrail Security integrates with next-generation virtual firewalls to enable advanced security services and keep

Application Traffic Visibility and Advanced Analytics

Contrail Security delivers visualization, analytics, and orchestration across multi-cloud environments while reducing risk from unauthorized traffic, using application-to-application flow discovery. It provides deep insight into application interactions, leveraging machine learning to detect anomalies and take corrective actions.

Contrail Security is available in the Contrail product family. To help with initial implementation and configuration, Juniper Professional Services offers JumpStart services for Contrail. Visit our Professional Services pages for a listing of all our service offerings.

Features

Natural-Language Processing

Allows security policies to be expressed in simple, everyday language of the application instead of in network coordinates.

Workload and Expression Tags

Uses tag expressions that describe application attributes instead of network coordinates that change frequently.

Fully Distributed Firewall

Embeds vRouter enforcement in the cloud infrastructure on every host where application workloads are launched, providing up to L4 security.

L7 Firewall Redirect

Reroutes selected traffic to L7 firewalls in a completely dynamic, programmatic fashion.

Rich Analytics Collection Framework

Collects application, infrastructure, network, and security data over various supported ingestion protocols; applications written on top of framework extract meaningful insights.

Traffic-Flow Visualization

Provides a dashboard enabling users to visualize traffic flows across different applications and application components, as well as associated security policies including adherence and violation status.

Technical Documentation

Support

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS
Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS
Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS
Sync your system to PACER to automate legal marketing.
