ZMax Pro, and any variants thereof. AGIS reserves the right to amend this list of Accused Products as discovery progresses. For example, AGIS reviewed Android-based products from Android-based handset manufacturers, including three ZTE phones (serial numbers 329F75623FA5; 329F7562388B; and 329F75624913) which are available for inspection at ZTE's request. For example, the Accused Products comprise ZTE Accused Products, including but not limited to the phones and tablets as described herein, running the following versions (and all intervening updates and sub-versions) of the Android mobile operating system: Android 2.3, 4.0, 4.1, 4.2, 4.3, 4.4, 5.0, 5.1, 6.0, 7.0, 7.1, 8.0, and 8.1. For example, the Accused Products comprise ZTE products, including but not limited to the phones and tablets as described herein, running any versions of the following Android-based applications and/or software: Android Device Manager, Find My Phone, Find My Device, Google Latitude, Google Plus, Google Hangouts, Google Maps, Google Assistant, Google Search, Google Messages, Android Messenger, Google Allo, Google Duo, GMail, and Google Chrome. For example, the Accused Products comprise ZTE products, including but not limited to the phones and tablets described herein, participating in any networks and/or services related to the execution and/or use of the Android mobile operating system versions and Android-based applications and/or software described herein.

AGIS does not concede that any claims of the '970 Patent that are not listed below are not infringed by the identified products. Moreover, the citations to certain documents and other information below are intended to be exemplary only and in no way foreclose AGIS from citing or relying on additional documents, information, source code, and/or testimony at a later time. These contentions are preliminary in nature, and an analysis of ZTE's products, internal documentation, source code, and/or testimony from relevant witnesses may more fully and accurately describe the infringing features of its accused products. Accordingly, AGIS reserves the right to supplement, correct, modify, and/or amend these contentions once such additional information is made available to AGIS. Furthermore, AGIS reserves the right to supplement, correct, modify, and/or amend these contentions as discovery in this case progresses; in view of the Court's claim construction order(s); in view of any positions taken by ZTE, including but not limited to positions on claim construction, invalidity, and/or non-infringement; and in connection with the preparation and exchange of expert reports.

I[P]. A communication system for transmitting, receiving, confirming receipt, and responding to an electronic message, comprising: a	ZTE infringes either directly or indirectly, induces others to infringe, and/or contributes to the infringement of this system as set forth below. ZTE makes, uses, sells, and otherwise provides this system by making, using, selling, and importing Android devices, as well as by providing its servers for use with Android devices to enable features such as Find My Device in a

predetermined network of participants, wherein each participant has a similarly equipped PDA/cell phone that includes a CPU and a touch screen display a CPU and memory;	<p>communication system for transmitting, receiving, confirming receipt, and responding to an electronic message, comprising: a predetermined network of participants, wherein each participant has a similarly equipped PDA/cell phone that includes a CPU and a touch screen display a CPU and memory.</p> <p>ZTE makes, uses, sells, and otherwise provides this communication system by making, using, selling, and importing Android OS devices such as Accused Products.</p>

The Accused Products meet the claim limitations by providing device-location tracking features such as those features described below. For example, the Accused Products meet the claim limitations because they are pre-installed with Android mobile operating systems containing code for providing device-location tracking features as provided in the claims limitations herein. For example, the Accused Products run applications and/or software that run within the Android mobile operating system and that use components of the Android mobile operating system to provide device-location tracking features. Upon information and belief, in addition to the components and features of the Android mobile operating system itself, the following applications and/or software run within the Android mobile operating system and use components of the Android mobile operating system to provide device-location tracking features: Android Device Manager, Find My Device.

Android Device Manager is the predecessor to Find My Device and has been available as a standard, pre-installed feature since 2013 and downloadable as a software application. The current iteration, Find My Device, often called the “new and improved Android Device Manager” or “rebranded Android Device Manager” is now part of the standard Google Play Protect suite which is “built in and enabled on all devices,” i.e., the Accused Products running Android OS. AGIS sets forth the Find My Device feature of the Accused Products as representative of this method. AGIS reserves the right to supplement these contentions to the extent that ZTE requires additional information in accordance with P.R. 3-1 and for any other reason for which it may deem necessary.
