15 IN RE PERSONALWEB TECHNOLOGIES,
16 LLC, ET AL., PATENT LITIGATION

CASE NO.: 5:18-md-02834-BLF

FIRST AMENDED COMPLAINT

DEMAND FOR JURY TRIAL

17
18
19
20 PERSONALWEB TECHNOLOGIES, LLC,
ET AL.,

Case No.: 5:18-cv-00159-BLF

21 Plaintiffs,

22 v.

23 OUR FILM FESTIVAL, INC., a Delaware
24 corporation, doing business as FANDOR, INC.,

25 Defendant.
26
27
28

1 Plaintiff PersonalWeb Technologies, LLC (“Plaintiff” or “PersonalWeb”) files this First
2 Amended Complaint (“Complaint”) for patent infringement against Defendant Our Film Festival, Inc.,
3 doing business as Fandor, Inc. (“Defendant”). Plaintiff PersonalWeb Technologies, LLC alleges:

4
5 **PRELIMINARY STATEMENT**

6 1. PersonalWeb and Level 3 Communications, LLC (“Level 3”) are parties to an
7 agreement between Kinetech, Inc. and Digital Island, Inc. dated September 1, 2000 (the “Agreement”).
8 Pursuant to the Agreement, PersonalWeb and Level 3 each own a fifty percent (50%) undivided
9 interest in and to the patents at issue in this action: U.S. Patent Nos. 6,928,442, 7,802,310, 7,945,544,
10 and 8,099,420 (“Patents-in-Suit”). Level 3 has joined in this Complaint pursuant to its contractual
11 obligations under the Agreement, at the request of PersonalWeb.

12 2. Pursuant to the Agreement, Level 3 has, among other rights, certain defined rights to
13 use, practice, license, sublicense and enforce and/or litigate the Patents-in-Suit in connection with a
14 particular field of use (“Level 3 Exclusive Field”). Pursuant to the Agreement PersonalWeb has,
15 among other rights, certain defined rights to use, practice, license, sublicense, enforce and/or litigate
16 the Patents-in-Suit in fields other than the Level 3 Exclusive Field (the “PersonalWeb Patent Field”).

17 3. All infringement allegations, statements describing PersonalWeb, statements
18 describing any Defendant (or any Defendant’s products) and any statements made regarding
19 jurisdiction and venue are made by PersonalWeb alone, and not by Level 3. PersonalWeb alleges that
20 the infringements at issue in this case all occur within, and are limited to, the PersonalWeb Patent
21 Field. Accordingly, PersonalWeb has not provided notice to Level 3—under Section 6.4.1 of the
22 Agreement or otherwise—that PersonalWeb desires to bring suit in the Level 3 Exclusive Field in its
23 own name on its own behalf or that PersonalWeb knows or suspects that Defendant is infringing or
24 has infringed any of Level 3’s rights in the patents.

25

26

27

28

THE PARTIES

1
2 4. Plaintiff PersonalWeb Technologies, LLC is a limited liability company duly organized
3 and existing under the laws of Texas with its principal place of business at 112 E. Line Street, Suite
4 204, Tyler, TX 75702.

5 5. Plaintiff Level 3 Communications, LLC is a limited liability company organized under
6 the laws of Delaware with its principal place of business at 100 CenturyLink Drive, Monroe,
7 Louisiana, 71203.

8 6. PersonalWeb’s infringement claims asserted in this case are asserted by PersonalWeb
9 and all fall outside the Level 3 Exclusive Field. Level 3 is currently not asserting patent infringement
10 in this case in the Level 3 Exclusive Field against any Defendant.

11 7. Defendant Our Film Festival, Inc., doing business as Fandor, Inc. is, upon information
12 and belief, a Delaware corporation having a principal place of business and regular and established
13 place of business at 200 Pine Street, San Francisco, California 94111.

14
15 **JURISDICTION AND VENUE**

16 8. The court has subject matter jurisdiction pursuant to 28 U.S.C. §§ 1331 and 1338(a)
17 because this action arises under the patent laws of the United States, 35 U.S.C. §§ 1 *et seq.*

18 9. Venue is proper in this federal district pursuant to 28 U.S.C. §§ 1391(b)–(c) and
19 1400(b) because Defendant, on information and belief, has a regular and established place of business
20 in this District and has committed acts of infringement in this District.

21 10. This court has personal jurisdiction over Defendant because, in addition to the
22 allegations in above paragraphs, on information and belief, Defendant is domiciled in this District.
23 Further, Defendant purposefully directed activities at residents of California, the claims herein arise
24 out of and relate to those activities, and assertion of personal jurisdiction over Defendant would be
25 fair.

26
27
28

PERSONALWEB BACKGROUND

1
2 11. The Patents-in-Suit cover fundamental aspects of cloud computing, including the
3 identification of files or data and the efficient retrieval thereof in a manner which reduces bandwidth
4 transmission and storage requirements.

5 12. The ability to reliably identify and access specific data is essential to any computer
6 system or network. On a single computer or within a small network, the task is relatively easy: simply
7 name the file, identify it by that name and its stored location on the computer or within the network,
8 and access it by name and location. Early operating systems facilitated this approach with standardized
9 naming conventions, storage device identifiers, and folder structures.

10 13. Ronald Lachman and David Farber, the inventors of the Patents-in-Suit, recognized
11 that the conventional approach for naming, locating, and accessing data in computer networks could
12 not keep pace with ever-expanding, global data processing networks. New distributed storage systems
13 use files that are stored across different devices in dispersed geographic locations. These different
14 locations could use dissimilar conventions for identifying storage devices and data partitions.
15 Likewise, different users could give identical names to different files or parts of files—or unknowingly
16 give different names to identical files. No solution existed to ensure that identical file names referred
17 to the same data, and conversely, that different file names referred to different data. As a result,
18 expanding networks could not only become clogged with duplicate data, they also made locating and
19 controlling access to stored data more difficult.

20 14. Lachman and Farber developed a solution: replacing conventional naming and storing
21 conventions with system-wide “substantially unique,” content-based identifiers. Their approach
22 assigned substantially unique identifiers to “data items” of any type: “the contents of a file, a portion
23 of a file, a page in memory, an object in an object-oriented program, a digital message, a digital
24 scanned image, a part of a video or audio signal, or any other entity which can be represented by a
25 sequence of bits.” Applied system-wide, this invention would permit any data item to be stored,
26 located, managed, synchronized, and accessed using its content-based identifier.

27 15. To create a substantially unique, content-based identifier, Lachman and Farber turned
28 to cryptography. Cryptographic hash functions, including MD4, MD5, and SHA, had been used in

1 computer systems to verify the integrity of retrieved data—a so-called “checksum.” Lachman and
2 Farber recognized that these same hash functions could be devoted to a vital new purpose: if a
3 cryptographic hash function was applied to a sequence of bits (a “data item”), it would produce a
4 substantially unique result value, one that: (1) virtually guarantees a different result value if the data
5 item is changed; (2) is computationally difficult to reproduce with a different sequence of bits; and
6 (3) cannot be used to recreate the original sequence of bits.

7 16. These cryptographic hash functions would thus assign any sequence of bits, based on
8 content alone, with a substantially unique identifier. Lachman and Farber estimated that the odds of
9 these hash functions producing the same identifier for two different sequences of bits (i.e., the
10 “probability of collision”) would be about 1 in 2 to the 29th power. Lachman and Farber dubbed their
11 content-based identifier a “True Name.”

12 17. Using a True Name, Lachman and Farber conceived various data structures and
13 methods for managing data (each data item correlated with a single True Name) within a network—
14 no matter the complexity of the data or the network. These data structures provide a key-map
15 organization, allowing for a rapid identification of any particular data item anywhere in a network by
16 comparing a True Name for the data item against other True Names for data items already in the
17 network. In operation, managing data using True Names allows a user to determine the location of
18 any data in a network, determine whether access is authorized, and to selectively provide access to
19 specific content not possible using the conventional naming arts.

20 18. On April 11, 1995, Lachman and Farber filed their patent application, describing these
21 and other ways in which content-based “True Names” elevated data-processing systems over
22 conventional file-naming systems. The first True Name patent issued on November 2, 1999. The last
23 of the Patents-in-Suit has expired, and the allegations herein are directed to the time period before
24 expiration of the last of the Patents-in-Suit.

25 19. PersonalWeb has successfully enforced its intellectual property rights against third
26 party infringers, and its enforcement of the Patents-In Suit is ongoing. This enforcement has resulted
27 in PersonalWeb obtaining settlements and granting non-exclusive licenses regarding the Patents-in-
28 Suit.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
