 12 UNITED STATES DISTRICT COURT
 13 NORTHERN DISTRICT OF CALIFORNIA
 14 SAN JOSE DIVISION

15 IN RE PERSONALWEB TECHNOLOGIES,
 16 LLC, ET AL., PATENT LITIGATION

CASE NO.: 5:18-md-02834-BLF

18 AMAZON.COM, INC., et al.,

19 Plaintiffs,

20 v.

21 PERSONALWEB TECHNOLOGIES, LLC, et
 22 al.,

Defendants.

**PERSONALWEB’S DISCLOSURES
 PURSUANT TO PATENT LOCAL RULES
 3-1 AND 3-2**

Case No.: 5:18-cv-00767-BLF

23 PERSONALWEB TECHNOLOGIES, LLC and
 24 LEVEL 3 COMMUNICATIONS, LLC,

25 Counterclaimants,

26 v.

27 AMAZON.COM, INC. and AMAZON WEB
 28 SERVICES, INC.,

Counterdefendants.

1 Pursuant to Patent Local Rules 3-1 and 3-2, Counterclaimant PersonalWeb Technologies, LLC
2 (“Counterclaimant” or “PersonalWeb”) hereby makes the following Disclosure of Asserted Claims
3 and Infringement Contentions to Counterdefendants Amazon.com, Inc. and Amazon Web Services,
4 Inc. (collectively, “the Amazon Parties” or “Defendants”). These disclosures are preliminary and subject
5 to change based upon discovery and the Court’s claim construction rulings:

6 **I. PRELIMINARY STATEMENT**

7 In making these contentions, Plaintiff has not yet received any discovery from Defendants
8 regarding their infringing methods and systems and has not had access to the source code of the
9 accused methods and systems. Plaintiff has, however researched available information, including (1)
10 Defendants’ website(s), (2) publicly available information published by Defendants’ about their
11 accused products and services, and (3) publicly available statements and information describing
12 Defendants’ accused products and services. Furthermore, PersonalWeb is serving these contentions
13 before being allowed access to PersonalWeb’s Final Infringement Contentions in *PersonalWeb v.*
14 *Amazon*, Eastern District of Texas, Case No. 6:11-cv-00658 (LED), which are also non-public
15 information. PersonalWeb therefore reserves the right to amend its Infringement Contentions under
16 Patent L.R. 3-6(c).

17 Defendants engage in the allegedly infringing conduct through computer systems operating
18 proprietary software. Defendants do not publicly disclose the precise operation of their computer
19 systems and do not publicly disclose their source code. Because Defendants have not publicly
20 disclosed the specific operation of their accused products and services and do not publicly disclose
21 their source code for those products and services, PersonalWeb is inherently limited in the degree of
22 specificity it can provide in the preliminary infringement contentions. Under these circumstances, the
23 Northern District of Texas recognizes that the plaintiff will not be able to provide highly specified
24 infringement contentions and should be permitted further discovery to supplement initial contentions
25 with additional information. *SpeedTrack, Inc. v. Amazon.com, Inc.*, No. 4:09-cv-04479-JSW (KAW),
26 2018 U.S. Dist. LEXIS 112885, at *16 (N.D. Cal. July 6, 2018). Similarly, Patent Local Rule 3-1
27 “does not require [the patent owner] to produce evidence of infringement”, but rather requires that the
28

1 patent owner merely provide the accused infringer “with notice of infringement beyond that which is
 2 provided by the mere language of the patents themselves.” *Network Caching Technology, LLC v.*
 3 *Novell, Inc.*, 2003 U.S. Dist. LEXIS 9881, 2003 WL 21699799, *4 (N.D. Cal. 2003).

4 Accordingly, PersonalWeb reserves the right to amend its disclosures, including the identity
 5 of the claims being asserted, upon receiving discovery from Defendants.

6 **II. DISCLOSURES UNDER PATENT LOCAL 3-1**

7 **(a) 3-1(a): Asserted Claims**

8 The following claims of each patent in suit are allegedly infringed by the Amazon Parties, the
 9 applicable statutory subsections of 35 U.S.C. §271 asserted.

10 Asserted Patent	11 Asserted Claims	12 Statutory Provision
13 '310	20	35 U.S.C. § 271(a)
14 '420	25, 26, 27, 29, 32, 34, 35, 36, 15 166	35 U.S.C. § 271(a)
16 '442	10, 11	35 U.S.C. § 271(a)

17
 18 **(b) 3-1(b): Accused Instrumentality**

19 The accused method operates in a system that includes website file host servers of Amazon
 20 Web Services (“AWS”) Simple Storage Service (“S3”) (“S3 website file host servers”) when used to
 21 by Amazon and website operators to control the distribution of hosted webpage file content to other
 22 computers connected to S3 website file host servers via the Internet, such as CloudFront content
 23 delivery network service (“CloudFront PoP servers”), outside intermediate cache servers and
 24 computers running web browsers.

25 The accused method operates in a system that includes Points of Presence of the CloudFront
 26 PoP servers when used by Amazon and website operators to control the distribution of hosted webpage
 27
 28

1 file content to other computers connected to AWS CloudFront PoP servers and each other via the
2 Internet, such as outside intermediate cache servers and computers running web browsers.

3 The accused systems and methods include certain accused functionalities when combined in
4 the manner specified by the asserted claims. Inclusion in the list below does not imply that the
5 functionality is an element of any particular patent claim. These functionalities include, but are not
6 necessarily limited to:

- 7 (a) generating content-based values for the content of webpage files uploaded to and stored as
8 objects on S3 web hosting servers by website operators;
- 9 (b) storing such values associated with the respective uniform resource identifiers (“URIs”) or
10 uniform resource locators (“URLs”) of such objects;
- 11 (c) inserting such content-based values as ETags in HTTP 200 messages;
- 12 (d) identifying such content-based values received in conditional HTTP GET request ETag
13 headers;
- 14 (e) comparing such received content-based values with stored ETag values to determine if
15 there is a matching value currently stored for that URI/URL;
- 16 (f) receiving and responding to HTTP GET request for a given URI of a given webpage asset
17 file of a website operator customer stored on S3 servers by generating and serving HTTP
18 200 messages with the current content for that URI/URL placed into the message body and
19 the current content-based value associated with the current content for that URI/URL
20 placed into an ETag header of HTTP 200 message;
- 21 (g) receiving and responding to conditional HTTP GET request having an If-None-Match
22 header containing content-based ETag values for the content of hosted webpage file objects
23 by comparing the content-based ETag value received in the conditional GET request with
24 the content-based ETag values stored on the server to determine whether the received value
25 matches the latest/current ETag value stored on the server associated with that URI/URL;
- 26

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
