

# EXHIBIT L

**Claim Chart For U.S. Patent 9,268,748**

Claim 1	Infringement Analysis
<p>1. An apparatus, comprising:</p>	<p>Non-limiting preamble. By way of background, the eXtensible Business Reporting Language (XBRL) <u>Financial Reporting</u> standard (see <a href="http://www.xbrl.org/Specification/xbrl-recommendation/31+corrected-errata-2012-01-25.htm">http://www.xbrl.org/Specification/xbrl-recommendation/31+corrected-errata-2012-01-25.htm</a>) specifies a Report generation and formatting <b>apparatus</b> to process a set of interrelated eXtensible Markup Language (XML)-formatted</p> <p>(1) how <i>tagged numerical data</i> items to be formatted in an <u>XBRL Financial Report</u> are (a) <i>tagged numerical data</i> value that will be reported) related to a <u>Concept</u> (a particular meaning for the <i>tagged numerical data</i> value) in the context of the Taxonomy (a list of concepts included in the Financial Report, and a collection of XML-compliant documents (linkbases) and additional information that forms part of the concept definitions) for inclusion in a <u>Report Instance Document</u> (see XBRL “Essentials” <a href="https://specifications.xbrl.org/xbrl-essentials/">https://specifications.xbrl.org/xbrl-essentials/</a>)</p> <p>(2) how the <i>numerical data</i> items are <i>tagged</i> in the XML-compliant <b>Instance Document</b> (ending in “.xml”), which indicates the content of the Financial Report, to facilitate access to related linkbases:</p> <ul style="list-style-type: none"> <li>(a) XML-compliant <b>Schema Definition</b> file (with a name ending in “.xsd”) which indicates the structure and semantic meaning information,</li> <li>(b) XML-compliant <b>Label</b> file (with a name ending in “_lab.xml”) which indicates the <i>numeric data value</i>,</li> <li>(c) XML-compliant <b>Calculation</b> file (with a name ending in “_cal.xml”) which indicates how to determine how to combine information and to determine that the set of XML-compliant documents are valid,</li> <li>(d) XML-compliant <b>Definition</b> file (with a name ending in “_def.xml”) relates concepts,</li> <li>(e) XML-compliant <b>Presentation</b> file (with a name ending in “_pre.xml”) This file relates concepts with other concepts so that the resulting relations can guide the user interface, rendering, or visualization.</li> </ul> <p>(3) how each <i>tagged numerical data</i> item is identified and categorized from the information in the referenced linkbases using the <i>tags</i>,</p>

**Claim Chart For U.S. Patent 9,268,748**

Claim 1	Infringement Analysis
	<p>(4) how each <i>tagged numerical data</i> item is formatted for display,</p> <p>(5) how each <i>tagged numerical data</i> item is displayed hierarchically in relation to other <i>data</i> items,</p> <p>(6) how an individual <i>tagged numerical data</i> item is combined with other <i>tagged numerical data</i> items to yield a “summary” <i>tagged numerical data</i> item based on specified formulas relating to the meaning associated with the <i>numerical data</i> item’s <i>tag</i> in accordance with information from the associated XBRL Taxonomy file and the associated XBRL Calculation linkbase file, and</p> <p>(7) how the set of interrelated XBRL files are validated to ensure consistency and completeness of the information contained therein.</p> <p>The <u>XBRL Financial Reporting</u> standard specifies that each of the interrelated files comprising a Financial Report are encoded using the eXtensible Markup Language (XML) syntax and are interpreted, manipulated and displayed using a standard <i>apparatus</i> such as a World Wide Web browser (e.g., Microsoft Internet Explorer, Apple Safari, Google Chrome, Mozilla Firefox, etc.) for interpreting the set of interrelated XML-compliant documents containing <i>tagged numerical data</i> items, implementing the formatting, computation formulas and rules required to validate and display an encoded Financial Report in human readable form through the use of “<i>an apparatus</i>”.</p> <p>Therefore, any preparation, editing and submission of a Financial Report that complies with the <u>XBRL Financial Reporting Standard</u> by <b>Mattress Firm</b> would entail use of such “<i>an apparatus</i>”.</p>
a device;	The <i>apparatus</i> used by <b>Mattress Firm</b> to prepare, edit and submit a Financial Report that complies with the <u>XBRL Financial Reporting Standard</u> would entail use of an information processing system supporting a network browser operating on the <i>apparatus</i> .
and an application including a network browser on the device for accessing a system configured for: identification of at least one computer-readable Extensible Markup Language (XML)-compliant data document	In accordance with the <u>XBRL Financial Reporting</u> standard as described above, <b>Mattress Firm</b> ’s preparation, editing and generating of an XBRL-compliant Financial Report would require “ <i>An apparatus including a network browser on the device for accessing a system configured for: identification of at least one computer-readable Extensible Markup Language (XML)-compliant data document including: a plurality of line items with a plurality of data values, and a plurality of computer-readable semantic tags that describe a semantic meaning of the data values and a plurality of data values readably coupled to at least one of the data values, where the at least one computer-readable semantic tag is</i> ”.

**Claim Chart For U.S. Patent 9,268,748**

Claim 1	Infringement Analysis
<p>including: a plurality of line items with a plurality of data values, and a plurality of computer-readable semantic tags that describe a semantic meaning of the data values and are each computer-readably coupled to at least one of the data values, where the at least one computer-readable XML-compliant data document is capable of including multiple hierarchical relationships between two line items;</p>	<p><b><i>compliant data document is capable of including multiple hierarchical relationships between two line items</i></b>”.</p> <p>The <u>XBRL Financial Reporting</u> standard specifies the generation and display of standards using “<b><i>a network browser on the device for accessing a system configured for identifying one computer-readable Extensible Markup Language (XML)-compliant data document</i></b>” creation of a XBRL-compliant <u>Instance Document</u> and associated <u>linkbase</u> documents. This format would require the use of such an <b><i>apparatus</i></b> and <b><i>device</i></b>.</p> <p>As required by the <u>XBRL Financial Reporting</u> specifications, <b>Mattress Firm’s</b> creation, generation of an XBRL-compliant <u>Instance Document</u>, and its associated <u>linkbases</u> in this format, consists of “<b><i>a plurality of line items with a plurality of data values, and a plurality of computer-readable semantic tags</i></b>”. Each of the <b><i>data value tags</i></b> in the XBRL-compliant <u>Instance Document</u> to reference associated entries in the associated <u>linkbases</u> “<b><i>that describe a semantic meaning of the data values and are each</i></b> [thereby] <b><i>computer-readably coupled to at least one of the data values</i></b>”.</p> <p>The <u>XBRL Financial Reporting</u> standard includes “<b><i>multiple hierarchical relationships between two line items</i></b>”. The XBRL <u>Taxonomy</u> provides the semantic information needed to identify, format, and display the semantic meaning of data values, while the Rule Set(s) specify multiple hierarchical relationships between two of the plurality of line items, facilitating the formatting, display and validation of the elements of the Financial Report.</p> <p>Therefore, any preparation, editing and submission of a Financial Report that complies with the XBRL Reporting Standard by <b>Mattress Firm</b> would require “<b><i>An apparatus, comprising: ... a network browser on the device for accessing a system configured for identifying one computer-readable Extensible Markup Language (XML)-compliant data document with a plurality of line items with a plurality of data values, and a plurality of computer-readable semantic tags that describe a semantic meaning of the data values and are each computer-readably coupled to at least one of the data values, where the at least one computer-readable XML-compliant data document is capable of including multiple hierarchical relationships between two line items</i></b>” in the actions specified in the XBRL <u>Instance Document</u> and the associated <u>linkbases</u>.</p>

**Claim Chart For U.S. Patent 9,268,748**

Claim 1	Infringement Analysis
<p>parsing of the at least one computer-readable XML-compliant data document;</p>	<p>In accordance with the XBRL Financial Reporting standard as described above, <b>Mattress Firm</b> editing and generating of an XBRL-compliant Financial Report would require <b>“An apparatus, comprising: ... parsing of the at least one computer-readable XML-compliant data document”</b>. Since the <u>Instance Document</u>, and the <u>linkbases</u> it references, are all <b>computer-readable XML-compliant data documents</b>, the <b>device would have to be able to parse the computer-readable XML-compliant data documents</b> to obtain the <b>data values</b> and <b>tags</b> to identify, format, apply calculation and validation rules and then to display the results.</p> <p>Therefore, any preparation, editing and submission of a Financial Report that complies with the XBRL Reporting Standard by <b>Mattress Firm</b> would require <b>“An apparatus, comprising: ... parsing of the at least one computer-readable XML-compliant data document”</b> to perform the actions specified in the <u>XBRL Instance Document</u> and the associated <u>linkbases</u>.</p>
<p>accessing a plurality of computer-readable rules including: a computer-readable datatype rule for validation of a type of data values, a computer-readable calculation rule for validation of a calculation involving data values, and a computer-readable unit rule for validation of a unit of data values;</p>	<p>In accordance with the <u>XBRL Financial Reporting</u> standard as described above, <b>Mattress Firm</b> editing and generating of an XBRL-compliant Financial Report would require <b>“An apparatus, comprising: ... accessing a plurality of computer-readable rules including: a computer-readable datatype rule for validation of a type of data values, a computer-readable calculation rule for validation of a calculation involving data values, and a computer-readable unit rule for validation of a unit of data values”</b>.</p> <p>The <u>XBRL Financial Reporting</u> standard uses an XML-compliant <b>computer-readable Instance Document</b> to describe the contents of the Financial Report, and associated <u>linkbases</u> to describe the calculation and validation information. The XML-compliant Calculation (.cal) <u>linkbase</u> contains a <b>tag</b> associated with each individual <b>data value</b> contained in the <u>Instance Document</u>, and <b>computer-readable rules including: a computer-readable datatype rule for validation of a type of data values, a computer-readable calculation rule for validation of a calculation involving data values, and a computer-readable unit rule for validation of a unit of data values”</b>.</p> <p>The XBRL <u>Taxonomy</u> contained in the <u>Instance Document</u> provides the hierarchical structure and sequence and identification of calculated heading/summary <b>data values</b>, while the information to identify, format and interpret the semantic meaning of data values is extracted from the <u>Instance Document</u> referenced via the <b>data value’s tag</b>.</p> <p>Therefore, any preparation, editing and submission of a Financial Report that complies with the XBRL Reporting Standard by <b>Mattress Firm</b> would require <b>“An apparatus, comprising: ... accessing a plurality of computer-readable rules including: a computer-readable datatype rule for validation of a type of data values, a computer-readable calculation rule for validation of a calculation involving data values, and a computer-readable unit rule for validation of a unit of data values”</b>.</p>

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
