This book is printed on acid-free paper.

DMA slave

DMA slave A device on the Micro Channel bus that uses the system-provided direct memory access (DMA) facilities instead of having a built-in controller. See also Bus Master.

DMH Device message handler.

DML Data manipulating language.

DNC Dynamic network collection.

DNIC Data network identification code.

DNIS Dialed number identification service.

DOC Documentation.

DOCID Document Identification. See also object name.

document (1) A named, structural unit of text that can be stored, retrieved, and exchanged among systems and users as a separate unit. (T) (2) Information and the medium on which it is recorded that generally have permanence and can be read by humans or by machine. (3) In word processing, a collection of information that pertains to a particular subject or related subjects. Synonymous with file. (4) In System/36, a collection of one or more lines of text that can be named and stored as a member in a folder.

document administrator The person who defines, organizes, manages, controls, and protects documents. (T) (A)

document architecture A complete set of interrelated rules defining the possible structures of documents taken into consideration in a specific text processing environment. (T)

document area In OfficeVision, the area of the Writing Pad window in which text is entered.

document assembly Synonym for document merge. (T)

documentation (1) The management of documents, which may include the actions of identifying, acquiring, processing, storing, and disseminating them. (I) (A) (2) A collection of documents on a given subject. (I) (A) (3) The aids provided for understanding the structure and intended uses of an information system or its components, such as flowcharts, textual material, and end-user manuals. (A) (4) See system documentation.

document authority Permission granted to one user to work with documents that are owned by another user.

document body The contents of a document, including text and layout information, but excluding the document profile. (T)

Document button A LinkWay button object that lets the user display a document from a specified file.

document class In the OS/400 operating system, a user-defined character string, 1 through 16 characters long, that characterizes a document. It can be used to search for a filed document. For example, a document that is a memo could have a document class of MEMO; a document that is a report, REPORT.

document conversion processor A computer program that processes a machine-readable document, including formatting controls written in one formatter language, to produce a machine-readable document including formatting controls appropriate for another formatter language.

document copying The making of one or more true copies of an original on the same or a different scale by means of a document copying machine. (T)

document copying machine (1) A machine that uses the diazo process, electrostatic process, silver process, or thermographic process primarily to produce copies of an original without affecting the original. (T) (2) See console document copying machine, desk-top document copying machine, diazo document copying machine, electrostatic document copying machine, feed-past document copying machine, feed-through document copying machine, moving-platen document copying machine, photographic document copying machine, stationary-platen document copying machine, thermographic document copying machine.

document delivery The transfer of a document into the recipient's environment. (T)

document description Data that describe the characteristics of a document, such as document type, subject, author, and date created.

document details Data that describes the characteristics of a document; for example, document type, subject, author, and date created.

document drawer A drawer underneath a network controller for storing the operator's guide, the key that locks and unlocks machine elements, and spare lights and fuses.

document environment group In the 3800 Print Services Facility, an internal object that is a required part of every form definition, identifies suppression usage, identifies overlays to be used, and defines the placement of one or more pages on the form.
