(57)   **ABSTRACT**

An electronic device, system and metho
an individual on proper motion during
The system employs an electronic dev
monitors an individual's motion throug
erometer capable of measuring param
the individual's movement. The device
programmable microprocessor which
stores and responds to data relating to t
eters based on customizable operation p
clock connected to the microprocessor
the movement data, a power source, a
the data from the device to other co
devices contained within the system, a
output components. The download
device can be worn at various position
appendages being monitored depending
cal task being performed. The device als
movements made while the device is
preprogrammed recordable event is re
records the time and date of the occurr
feedback to the wearer via visual, audib
ings.

US 6,059,576 C1 Claim 1 vs. GARMIN

Claim 1

1. A portable, self-contained device for monitoring movement of body parts during physical activity, s
comprising:

> a movement sensor capable of measuring data associated with unrestrained movement
> direction and generating signals indicative of said movement;

> a power source;

> a microprocessor connected to said movement sensor and to said power source, said
> microprocessor capable of receiving, interpreting, storing and responding to said movement da
> user-defined operational parameters, *detecting a first user-defined event based on the movem*
> *and at least one of the user-defined operational parameters regarding the movement data, and*
> *first event information related to the detected first user-defined event along with first time sta*
> *information reflecting a time at which the movement data causing the first user-defined event o*

> at least one user input connected to said microprocessor for controlling the operation of

> a real-time clock connected to said microprocessor;

> memory for storing said movement data; and

> an output indicator connected to said microprocessor for signaling the occurrence of use
> events;

> wherein said movement sensor measures the angle and velocity of said movement.

DOCKET ALARM

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS
Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS
Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS
Sync your system to PACER to automate legal marketing.

fastcase®
Smarter legal research.
