PHILLIPS

Overview

Overview – Philips’s Motions

1. Mot. to Strike Portions of Paradiso’s Opening Rpt. on Undisclosed Prior Art (Dkt. 259,260)
 - Opinions purportedly offered under 35 U.S.C. § 101 discuss prior art never previously identified as grounds for invalidity (in reality, a backdoor § 103 analysis)
 - Fitbit never sought to amend contentions.
2. Motion to Strike Portions of Fitbit Experts’ (Paradiso & Kindler) Rebuttal Reports Concerning Non-Infringing Alternatives (Dkt. 300, 301)
 - Fitbit’s Failure to Designee 30(b)(6) Designee re Non-Infringing Alternatives
 - Fitbit’s Failure to meet burden in opening expert reports
3. Motion to Preclude Paradiso Testimony Concerning iFIT Prior Art (Dkt 305, 306)
 - By Dr. Paradiso’s own admission the prior art does not disclose a critical element resulting in a flawed and unreliable option with regard to iFIT
 - Related: MSJ of No Invalidity re iFIT (Dkt. 335,340.)
4. Mot. to Strike Portions of Paradiso’s Opening Rpt. on Indefiniteness (Dkt. 259, 260)
 - Never disclosed in contentions and Fitbit never sought to amend contentions.
5. Motion to Strike Portions of Paradiso Rebuttal Rpt. concerning purported lack of provisional support (Dkt 300, 301)
 - Never previously contended. Rather, Fitbit previously admitted that ’377 Patent was entitled to the priority date of the provisional.

1. Motion to Strike Portions of
Paradiso's Opening Expert
Report Concerning
Undisclosed Prior Art
(Dkt. 259, 260)

Undisclosed Prior Art

- Fitbit's Position on 11 Undisclosed Prior Art References:
 - 9 references disclosed against other asserted patents but not the '377 Patent
 - 1 reference (Vaisanen) allegedly disclosed in non-instituted IPR filed after service of contentions
 - 1 references (DARPA) admittedly not disclosed in any fashion
- Despite having disclosed 39 separate pieces of prior art against the '377 Patent and thousands of potential obviousness combinations. (Dkt. 261-1, 11-3, 72-91 and Dkt. 261-2 at 12-14, 74-97)
- No Amendment Sought in violation of the Local Rules and the Court's Scheduling Order
- “If the parties were not required to amend their contentions promptly after discovering new information, the contentions requirement would be virtually meaningless as a mechanism for shaping the conduct of discovery and trial preparation.” *Philips v. Fitbit*, Dkt. 254 (quoting *02 Micro Int'l. Ltd. v. Monolithic Power Sys., Inc.*, 467 F. 3d 1355, 1366 n.12 (Fed. Cir. 2006)).

Dr. Paradiso's Use of Undisclosed Art

- Under the guise of § 101, Dr. Paradiso summarizes the elements of the claim:

- interactive exercise monitoring;
- web-enabled wireless phones;
- downloading an application from a remote server over the internet;
- rendering user interfaces on web-enabled wireless devices;
- gathering exercise and physiologic status data while a subject is exercising;
- coupling web-enabled wireless devices to data gathering devices and/or transferring data between devices using either wired connections or short-range wireless communications including infrared and radio frequency ("RF") communication protocols;
- sending data over the internet to back-end servers for further processing; and
- receiving and displaying calculated responses.

[T]he asserted claims of the '377 patent generally recite the following components and concepts, which relate to collecting, analyzing, and displaying exercise-related information:

- The proceeds to disclose what Fitbit now characterizes as "background art" that would meet the limitations.
- Indeed ¶¶ 196-307 consist mostly of copy-and-pasted disclosures, including many undisclosed references that were selected to line up with Dr. Paradiso's "paraphrasing" of the claim limitations.

Dr. Paradiso's Use of Undisclosed Art

- For example, with regard to the paraphrased element “coupling web-enabled wireless devices to data gathering devices and transferring data between devices using either wired connections or short-range wireless communications including infrared and RF communication protocols” Dr. Paradiso opines that this was “well known” in the art by pointing to specific disclosures of undisclosed references:

302. As another example, “Duffin” (U.S. Patent No. 5,752,976) describes the prior art’s

widespread use of short-range wireless communications in the context of arrhythmia control

devices:

Over time, various patient worn, ambulatory ECG and device monitors have been developed for providing ECG data for remote analysis of cardiac arrhythmias. Also, the remotely programmable modes of operation of implanted medical devices increased, and programming methods improved.

The pacemaker operating modes and the algorithm for calculation of the appropriate pacing rate are programmed or reprogrammed into internal memory by accessing the implanted pacemaker’s telemetry transceiver with an external programmer.

Such implanted devices can also process the patient’s electrogram and any measured physiological conditions employed in the diagnosis and store the data, for subsequent telemetry out on interrogation by the external programmer. The telemetered out data is analyzed and may be employed to establish or refine the operating modes and parameters by a doctor to adjust the therapies the device can deliver. In general, the manner of communicating between the transceivers of the external programmer and the implanted device during programming and interrogating is referred to as telemetry.

Initially, when programming techniques were first devised, the paramount concern addressed related to patient safety. Safeguards addressed the concern that the patient could be put at risk of inadvertent misprogramming of the implanted device, e.g. by stray electromagnetic fields. For this reason, and in order to avoid high current consumption that would shorten the implanted device battery life, telemetry operating range was extremely limited. In systems continuing to the present time, telemetry has required application of a magnetic field at the patient’s skin over the implanted device to close a Reed switch while RF programming or interrogating commands are generated to be received by the implanted device transceiver. The programming or interrogating commands are decoded and stored in memory or used to trigger telemetry out of stored data and operating modes and parameters by the implanted device transceiver.

* * *

One of the external devices disclosed in the ‘869 patent is a wrist worn, personal communicator alarm for responding to a telemetered out signal and emitting a warning to the patient when the implanted AECG monitor has detected an arrhythmia. The patient is thereby advised to take medications or contact the physician or to initiate external cardioversion. The personal communicator alarm also includes a transceiver and may also be used to control certain functions of the implanted AECG monitor. A further, belt worn “full disclosure recorder” is disclosed with high capacity memory for receiving and storing data telemetered out of the implanted AECG monitor when its memory capacity is exhausted.

A remote, external programmer and analyzer as well as a remote telephonic communicator are also described that may be used in addition to or alternately to the personal communicator alarm and/or the full disclosure recorder. The programmer and analyzer may operate at a distance to the implanted AECG monitor to perform programming and interrogation functions. Apparently, the implanted AECG may automatically transmit a beacon signal to the programmer and analyzer to initiate an interrogation function to transmit data to the programmer and analyzer on detection of an arrhythmia or a malfunction of the implanted AECG monitor detected in a self-diagnostic test. Or by setting a tuner in the personal communicator alarm, the implanted AECG monitor may be automatically interrogated at preset times of day to telemeter out accumulated data to the telephonic communicator or the full disclosure recorder. The remote telephonic communicator may be part of the external programmer and analyzer and is automatically triggered by the alarm or data transmission from the implanted AECG monitor to establish a telephonic communication link and transmit the accumulated data or alarm and associated data to a previously designated clinic or physician’s office through a modem. Safeguards addressed the concern that the patient could be put at risk of inadvertent misprogramming of the implanted device, e.g. by stray electromagnetic fields. For this reason, and in order to avoid high current consumption that would shorten the implanted device battery life, telemetry operating range was extremely limited.

“Background Art” Does Not Circumvent L.R.S

- Courts routinely strike reliance on prior art not disclosed in contentions when purportedly offered merely as “background” or to show the “state of the art” (*See* Dkt. 260 at 8):
 - *Life Techs Corp. v. Biosearch Techs., Inc.*, No. C 12-00852, 2012 WL 4097740, *2 (N.D. Cal. Sept. 17, 2012) (striking portions of expert report that discussed alleged “background prior art” that had not been adequately disclosed)
 - *Encore Corp. v. Optium Corp.*, No. 7-326, 2009 WL 3381800 (W.D. Penn. Oct. 16, 2009) (holding that “state of the art” is a subset of prior art and thus must be disclosed under the local patent rules).
 - *Pactiv Corp. v. Mutisorb Techx, Inc.*, 2013 WL 2384249, *2 (N.D. Ill., May 29, 2013) (“parties should not be able to circumvent the disclosure requirements of our Local Patent Rules by offering such materials as background”)

2. Motion to Strike Portions of
Fitbit Experts' (Paradiso &
Kindler) Rebuttal Reports
Concerning Non-Infringing
Alternatives (Dkt. 300, 301)

Undisclosed Non-Infringing Alternatives

- Fitbit refused to designate a witness re Non-Infringing Alternatives:

DEPOSITION TOPIC NO. 52:

Any alleged non-infringing alternatives to the Asserted Patents, including the identity of each alternative, the time period during which each alternative was available, the time and cost to develop, design, and manufacture each alternative, and any differences between each alternative and the Accused Products.

RESPONSE TO TOPIC NO. 52:

[...]

Subject to and without waiving the foregoing general and specific objections, Fitbit will not designate a witness to testify on this Topic at this time.

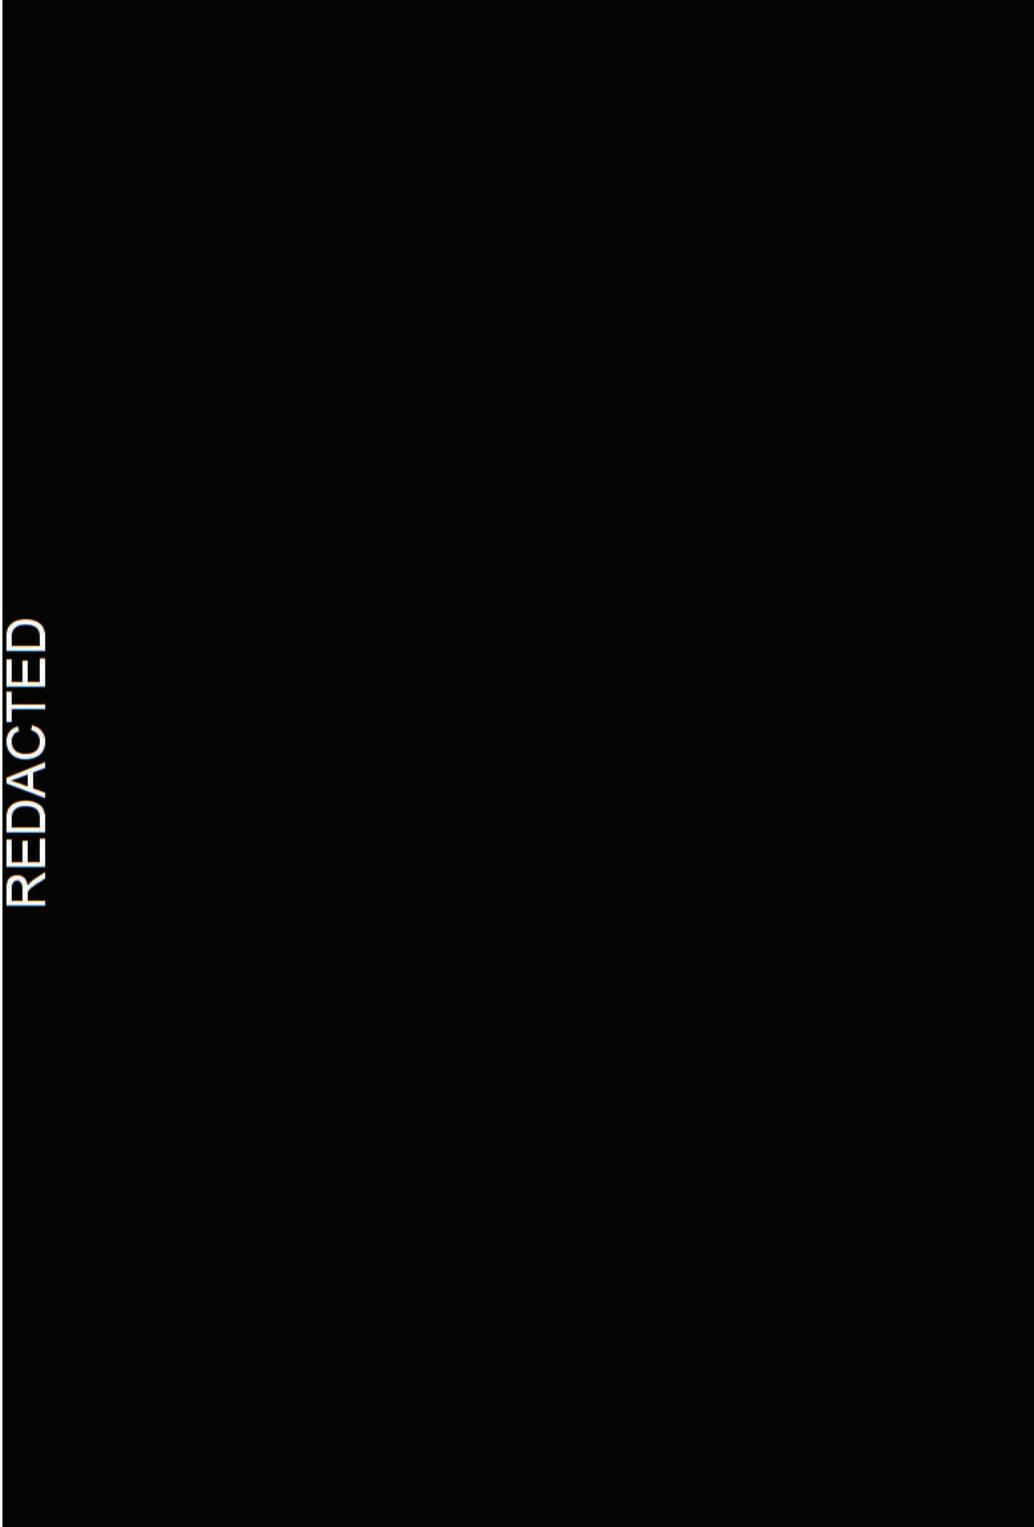

- Dkt. 302-2
- Instead, purported to offer a witness on design arounds limited to non-infringing alternatives who testified that Fitbit had none.
 - Failed to meet its burden on non-infringing alternatives in opening expert reports:
 - *Smart Skins LLC v. Microsoft Corp.*, No. 15-544-MJP, 2016 WL 4148091 (W.D. Wash. July 1, 2016) (for reasonable royalty, Defendant bears burden re non-infringing alternatives)
 - Fitbit: relies on inapplicable lost profits cases to suggest burden on Philips
 - Not proper rebuttal to Dr. Martin's Opening Report on Infringement.
 - Philips prejudiced without opportunity to rebut and depose fact witnesses. **PHILIPS**

3. Motion to Preclude
Paradiso Testimony
Concerning iFIT Prior Art
(Dkt 305, 306)

iFIT Does Not Disclose Element 1(h):

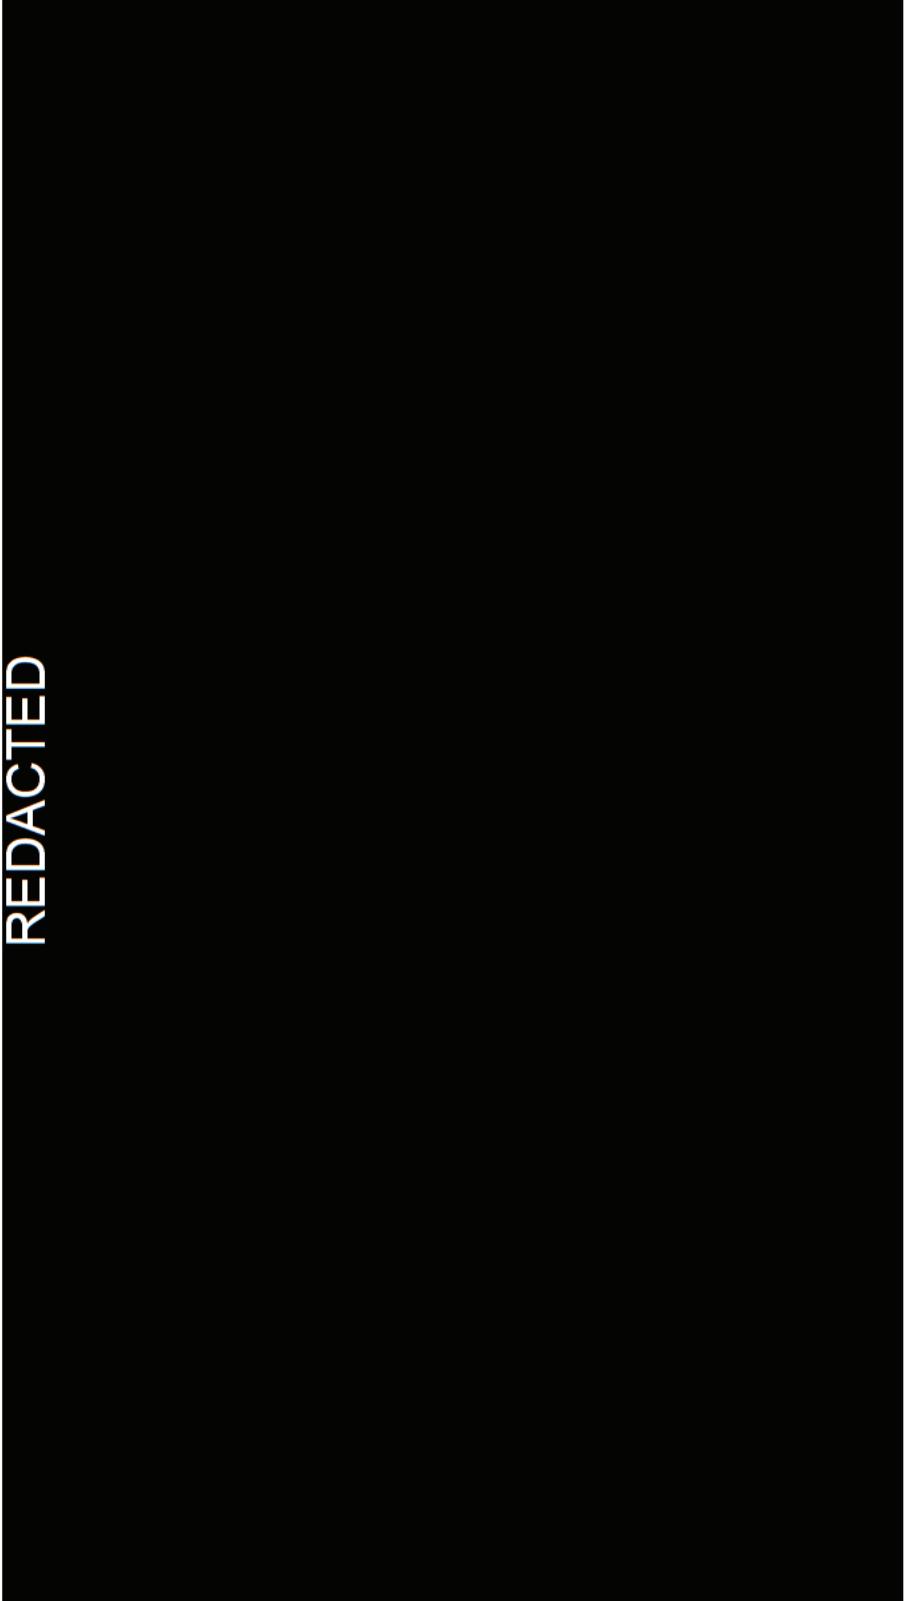

- Element 1(h) of the '377 Patent requires: “[h] receiving a calculated response from the server, the response associated with a calculation performed by the server based on the exercise-related information.”
- Dr. Paradiso’s opinions with respect to iFIT are unsupported and unreliable because they fail to point to any evidence that element 1(h) is met.
- **First**, Paradiso point to user manuals that purportedly disclose a “calculated response” in the form of a website, iFIT.com, “adjust[ing] the speed and/or incline of the tread ... As needed to keep [the user’s] heart rate near the current target heart rate setting.”
However:
 - Admitted that manuals do not disclose such functionality.
 - Admitted that manuals only describe a product capable of one-way communication (via audio), and not two-way communication as would be required to receive a calculated response from a server.
- **Second**, Paradiso cites the uncorroborated testimony of iFIT witness Colleen Logan
However:
 - Ms. Logan’s testimony is not specific to receiving any “calculated response”
 - She disclaimed any technical knowledge about how the systems worked.

REDACTED

REDACTED

REDACTED

REDACTED

Dr. Paradiso's Admissions:

- At deposition, Dr. Paradiso repeatedly confirmed that the iFIT documents disclosed only one-way communication (via audio) and
- Eventually agreeing that none of the documents he looked at supported his original opinion concerning iFIT.com controlling a treadmill based on heart rate information sent from the treadmill to iFIT.com:

16 Q. But none of the product manuals
17 that you looked at described to a
18 communication with a treadmill as of
19 December 17, 1999 that would allow the
20 treadmill to send information to iFit.com,
21 is that correct?
22 A. No, they do not.

Dkt. 308-2 at 177

4. Mot. to Strike Portions of Paradiso's
Opening Rpt. on Indefiniteness
(Dkt. 259, 260)
5. Motion to Strike Portions of Paradiso
Rebuttal Rpt. Concerning Purported
Lack of Priority to Provisional App.
(Dkt 300, 301)

Fitbit Failure to Disclose

- No disclosure of indefiniteness in L.R. 16.6 disclosures (despite identifying grounds for indefiniteness for many other terms) and never any attempt to amend.
- Until rebuttal reports, Fitbit agreed that there was no issue with priority claim to provisional of the '377 Patent
- Fitbit justifies lack of disclosure and change of positions exclusively on what it characterizes as a “vague” or “unclear” infringement contention with regard to “server” aspects of the claim, however:
 - Philip’s position has always been that the relevant “application” is downloaded from Apple or Google, as reflected in the Complaint, L.R. 16.6 disclosures, and the understanding of anyone who has used an “app store” to download an application to their phone
 - That Fitbit included undisclosed indefiniteness argument in its opening expert report demonstrates that it did not genuinely believe there to be confusion as to Philip’s contention—and no basis to challenge the claim of priority for the first time in rebuttal.

Phillips v. Fitbit

Case No. 1:19-cv-11586 (D. Mass)

Hon. Chief Judge Saylor

Opposition to Defendant's Motions to Strike and Preclude Expert Testimony

Hearing March 14, 2022

innovation  you

PHILLIPS

Motion to Strike Dr. Martin's Expert Report and Testimony

Fitbit's Arguments

Fitbit asserts that Philips violated LR 16.6(d) and failed to fully respond to Fitbit Int. No. 9.

1. Fitbit challenges notice of Philips' allegation that Fitbit directly infringes by joint infringement.
 - a. No challenge to direct infringement performed by Fitbit. Fitbit performs the method for the purposes of "testing its products and services, demonstrating its products and services to others, etc." Dkt. 270-10 at 9.
 - b. No challenge to direct infringement performed by Fitbit Users and Inducement by Fitbit. "[T]he customers directly infringe by using the Fitbit system, App, and services through their account." Dkt. 270-10 at 9.
2. Fitbit challenges notice of Philips' allegation of infringement by Cardio Fitness Score calculated based on exercise information including GPS (Fitbit dubbed "Run Cardio Fitness Score")
 - a. No challenge to Cardio Fitness Scores and Cardio Fitness Level based on exercise information including heart rate and accelerometers.
3. Fitbit challenges notice of Martin's testing evidence (Fitbit dubbed "Representative Product" theory)
 - a. No challenge to underlying notice of infringement of each product and each claim.

Philips Put Fitbit on Notice of Joint Infringement

Philips Provided Extensive Responses

- **January 31, 2020 Disclosures** (Dkt. 270-9, Exhibit 9)
 - Included claim charts
 - Incorporated the First Amended Complaint (Dkt. 25) of *November 27, 2019*
- **February 10, 2020 Response to Interrogatory** (Dkt. 270-3, Exhibit 3)
- **March 17, 2020 Supplemental Disclosures** (Dkt. 270-10, Exhibit 10)
 - Re-explained joint infringement from the complaint
 - Provided additional disclosure on performance of method
 - Fitbit Users perform when they purchase
 - Fitbit performs when it demonstrates, tests, etc.
- **May 15, 2020 Supplemental Disclosures** (Dkt. 270-11, Exhibit 11; Dkt. 287-1 to 287-9, Exhibits 1-9)
 - Provided updated claim charts

Philips Claim Charts

May 15, 2020 claim charts, Dkt. 270-11 at 3 and D.I. 270-12 at 6. **Fitbit and Fitbit users perform the steps of the method by “us[ing] the Accused Products.”** Dkt. 270-11 at 3.

- c. rendering a user interface on the web-enabled wireless phone;

The method provided by the Accused Product involves rendering a user interface on the web-enable wireless phone (via the Fitbit App):

Get your Fitbit app up and running today.

CHECK YOUR DEVICE COMPATIBILITY

method. See *BMC*, 498 F.3d at 1380-81. We conclude, on the facts of this case, that liability under § 271(a) can [**5] also be found when an alleged infringer conditions participation in an activity or receipt of a benefit upon performance of a step or steps of a patented method and establishes the manner or timing of that performance. Cf. at 1023

We reverse and reinstate the jury verdict. The jury heard substantial evidence from which it could find [**9] that Limelight directs or controls its customers' performance of each remaining method step, such that all steps of the method are attributable to Limelight. Specifically, Akamai presented substantial evidence demonstrating that Limelight conditions its customers' use of its content delivery network upon its customers' performance of the tagging and serving steps, and that Limelight establishes the manner or timing of its customers' performance. We review the at 1024

Philips Supplemental Disclosures

March 17, 2020 Supplemental Disclosures, Dkt. 270-10 at 9.

ii. Direct Infringement via Joint Infringement (35 U.S.C. § 271(a))

Fitbit has directly infringed the claims of the '377 Patent by jointly infringing with its customers. While Fitbit provides the accused activity tracker devices and the Fitbit App, the customer provides the mobile device running the Fitbit App. Fitbit and its customers then jointly perform the method covered by the '377 patent as charted. Indeed,

a customer only receives the benefits of the Fitbit products and services once he sets up a wireless connection between an activity tracker and the Fitbit App as described in Fitbit materials and the charted contentions, as instructed by Fitbit. Fitbit maintains control and supervision of requiring its users to maintain authorized accounts. Further, the customers directly infringe by using the Fitbit system, App and services through their account.

PHILIPS

Philips Disclosures Were Sufficient

February 10, 2020 - Response to Interrogatory, Dkt. 270-3 at 4.

In addition to directly infringing through its development and use of the Accused Products, and/or by prototyping and testing functionality of the Accused Products that infringe one or more claims of the Patents-in-Suit, Fitbit jointly infringes with its customers and subscribers with the establishment and operation of solutions covered by the Patents-in-Suit. For example, Fitbit's customers use their Fitbit devices, Fitbit account, and the Fitbit App jointly with Fitbit by downloading and activating the required software to a mobile device and additionally utilize software on Fitbit's servers, which enable functionality that may be relevant to infringement of the Asserted Patents. Fitbit customers receive a clear benefit from their use of the software and services made available by Fitbit, and those benefits are conditioned upon downloading, installing, and using Fitbit software and services.

Philips also refers Fitbit to its disclosures under L.R. 16.6(d)(1).

Philips Response, Dkt. 270-3 at 4

Martins Report is Consistent With Disclosures

more detail below with respect to achieving the specific functionalities accused of infringement by Philips. It is also apparent to me that Fitbit has conditioned the receipt of significant benefits provided by the accused products on requiring that its customers practice the '377 Asserted Claims.

11. Fitbit Conditions Benefits on Practicing the '377 Patent

259, Fitbit conditions the benefit of using the Cardio Fitness feature of the '377 Products on the user downloading of the Fitbit App onto a smartphone, pairing a '377 Device to said smartphone, syncing exercise-related data to the smartphone using the Fitbit App, and opening the Cardio Fitness Score page on the Fitbit App.

Martin Report, Dkt. 270-2 at ¶¶46, 259

LR 16.6(d)

LR 16.6(d)(1): “Patentee’s Preliminary Patent Related Disclosures”

Subsections (A)-(D): The disclosures are “Infringement Claim Charts”, “Prosecution History”, “Ownership Evidence” and “Real Parties In Interest.”

LR 16.6(d)(2): “Conference Concerning Preliminary Patent Disclosures” to address among other things “the sufficiency of the patentee’s disclosures”

LR 16.6(d)(4): “Accused Infringer’s Preliminary Production of Technical Documents, Source Code, and Samples of Accused Products”

Subsections (A)-(H): The disclosures are “Technical Documents”, “Samples”, “Source Code”, “Noninfringement Claim Charts”, “Invalidity Claim Charts – Anticipation or Obviousness”, “Other Grounds for Invalidity”, “Supporting Evidence for Invalidity Defense”, and “Identity of Real Parties in Interest”

Fitbit Misinterprets the Rules

LR 16.6(d)(1)(A): “if any alleged infringement is based on the acts of multiple parties, the role of each party in the infringement.”

- **The roles of Fitbit and Fitbit Users were extensively explained.**

Expert discovery is part of Rule 26(a) “Required Disclosures”

- Rule 26(a)(1) “Initial Disclosure”
- Rule 26(a)(2) “Disclosure of Expert Testimony”

Rule 37(c) includes precondition to any preclusion: “If a party fails to provide information or identify a witness as required by Rule 26(a) or (e)...”

- **Rule 26(a)(2) expert disclosures are part of the Rule 26 disclosures.**

Fitbit Misinterprets Its Cited Decisions

- Inline Plastics Corp. v. Lacerta Group, Inc.*, Case No. 4:18-cv-11631-TSH *4-6 (D. Mass. Feb. 23, 2021)(Judge Hillman) – supports denying Fitbit’s motion.
- “Inline’s Infringement Contentions were **purely based on a literal infringement theory**” and “Inline concedes that it **did not disclose or even reserve the right to add equivalent infringement theories.**” As a result, the court did not permit the addition of equivalent infringement after close of fact discovery.
 - The court distinguished situations where “**some measure of notice**” had been provided like “plaintiff reserved the right to pursue an equivalency infringement theory but did not provide detailed contentions” noting that an “expert report [could] provide[] more detail”). The court noted that 5 decisions denied motions to strike in such situations.
 - The court specifically distinguished the situation where “an expert report [] ‘more fully explain[ed]’ the plaintiff’s DOE infringement theories that had already been raised, albeit with inadequate facts and allegations, in its infringement contentions.” The court cited *Finjan, Inc. v. Blue Coat Sys. Inc.*, No. 13-03999, 2015 WL 3640694 (N.D. Cal. Jun. 11, 2015).

Fitbit Cited Decisions are inapposite

The other cases relied upon by Fitbit in its opening brief at 3 (Dkt. 269) are inapposite:

Woods v. DeAngelo Marine Exhaust, Inc., 692 F.3d 1272, 1279 (Fed. Cir. 2012)

- Supplementation at the close of discovery, after expert discovery
- Identification of prior art drawings alone at close of discovery, with no explanation, “did not provide notice of the party’s theory of liability”, i.e., that “the drawings … rendered MES’s patents obvious on a claim-by-claim basis”

B-K Lighting, Inc. v. Vision3 Lighting, 930 F. Supp. 2d 1102, 1137 (C.D. Cal. 2013)

- “The second post/opening pair … is not the allegedly infringing opening and post identified in B-K’s preliminary contentions.”
- There was also an assertion that the plaintiff “failed to assert literal infringement of this element.” Preliminary contention that “each of the limitations of each asserted claim is claimed to be literally present” was sufficient specificity. Motion to Strike denied.

Hochstein v. Microsoft Corp., No. 04-73071, 2009 WL 2498481, at *5 (E.D. Mich. Aug. 17, 2009)

- “Plaintiffs were aware … that the Xbox360 had wireless controllers”
- “Plaintiffs did not notify Microsoft that they intended to accuse the wireless controllers until March 27, 2009, long after discovery was closed and just a few months before trial was scheduled to begin.”

Philips Properly Put Fitbit On Notice

- “Proper infringement contentions provide a defendant with notice of a plaintiff’s infringement theories.” *Fenner Investments, Ltd. v. Hewlett-Packard Co.*, No. 6:08-cv-273, 2010 WL 786606, at *2 (E.D. Tex. Feb. 26, 2020)
 - “The scope of infringement contentions and expert reports are not, however, coextensive. Infringement contentions need not disclose specific evidence nor do they require a plaintiff to prove its infringement case.”

Phillips Put Fitbit on Notice of Infringement by Cardio Fitness Score Calculated from Exercise Information

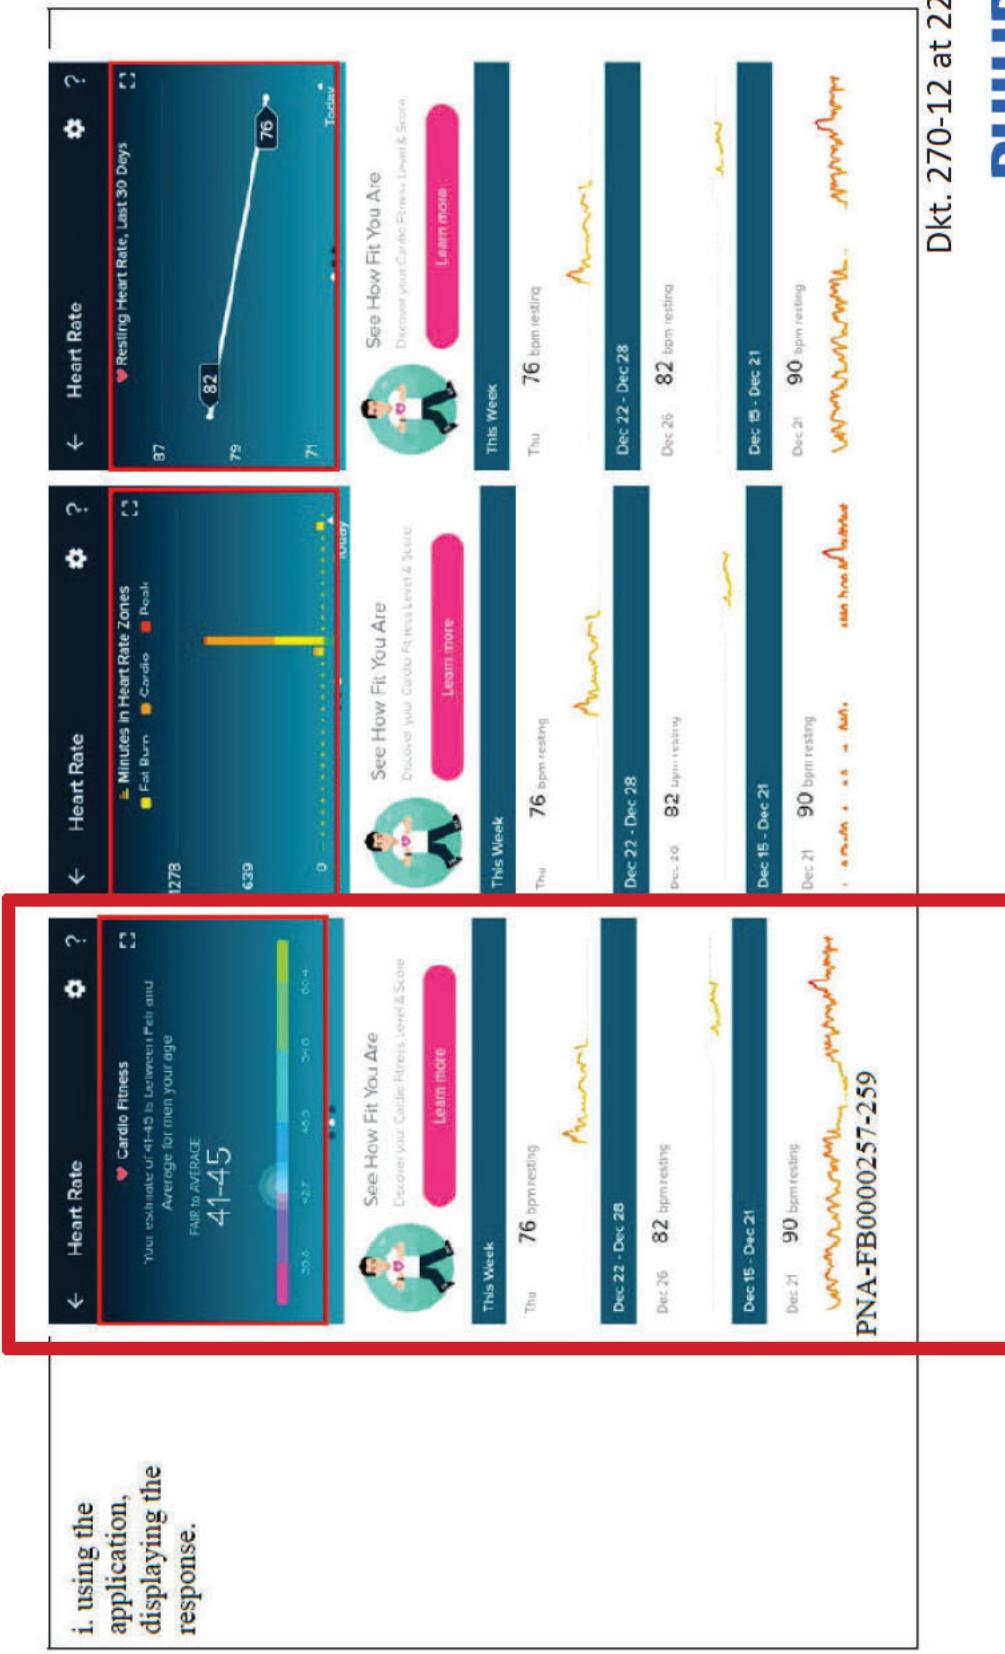

Philips Provided Extensive Responses

- **January 31, 2020 Disclosures** (Dkt. 270-9, Exhibit 9)
 - Included claim charts
 - Incorporated the First Amended Complaint (Dkt. 25) of *November 27, 2019*
- **February 10, 2020 Response to Interrogatory** (Dkt. 270-3, Exhibit 3)
- **March 17, 2020 Supplemental Disclosures** (Dkt. 270-10, Exhibit 10)
 - Re-explained joint infringement from the complaint
 - Provided additional disclosure on performance of method
 - Fitbit Users perform when they purchase
 - Fitbit performs when it demonstrates, tests, etc.
- **May 15, 2020 Supplemental Disclosures** (Dkt. 270-11, Exhibit 11; Dkt. 287-1 to 287-9, Exhibits 1-9)
 - Provided updated claim charts

PHILIPS

Philips Incorporated First Amended Complaint

[REDACTED] Fitbit's First Amended Complaint (Dkt. 25) also details Fitbit's infringement and is incorporated herein by reference.

Dkt. 270-11 at 3

[REDACTED] associated with a calculation performed by the server based on the exercise-related information (e.g., the Fitbit server performs calculations such as cardio fitness score based on the exercise-related information and sends it to the Accused Products including the Fitbit app on a smartphone), using the application, displaying the response (e.g., the response may be viewed on [REDACTED]

First Amended Complaint Dkt. 25 at ¶101

Philips Incorporated First Amended Complaint

Source: https://help.fitbit.com/articles/en_US/Help_article/1935 Fitbit generally explains the calculation of a cardio fitness score:

HOW DOES FITBIT MEASURE MY CARDIO FITNESS SCORE?

Your cardio fitness score is determined by your resting heart rate, age, sex, weight, and other personal information. For best results, make sure your weight is correct in your Fitbit profile. Also, wear your tracker or watch to sleep for a better resting heart rate estimate. Your cardio fitness score will be shown as a range unless you use GPS for runs.

First Amended Complaint Dkt. 25 at ¶101

Philips Incorporated First Amended Complaint

What is my cardio fitness score?

Track your overall cardiovascular fitness with your Fitbit device.

- How do I track my cardio fitness?
- What is VO2 Max?

➢ How does Fitbit measure my cardio fitness score?

Your *cardio fitness score* is determined by your **resting heart rate**, age, gender, weight, and other personal information. For best results, make sure your weight is correct in your Fitbit profile. Also, wear your tracker or watch to sleep for a better resting heart rate estimate. Your cardio fitness score will be shown as a range unless you use GPS for runs.

➢ How do I get a more precise estimate of my score?

If your Fitbit device connects to GPS, we can provide a more precise estimate of your score using the relationship between pace and heart rate during your runs. This is because individuals with higher VO2 Max have a lower heart rate while running at the same pace compared to individuals with lower VO2 Max. If you're able to run at a comfortable pace for at least 10 minutes, track a run with GPS. We recommend running on flat terrain as much as possible since only the flat sections of your run count toward your score estimate. You may need to go on several runs that are at least 10 minutes in length to affect your score.

For instructions on how to start in the Exercise app, see [How do I track my workouts with my Fitbit device?](#)

➢ How does Fitbit calculate my cardio fitness level?

We use your cardio fitness score in combination with your gender and age to calculate your cardio fitness level. By helping you understand how you compare to other people who share your gender and age range, cardio fitness level is a holistic way to track your cardiovascular fitness over time.

PHILIPS

Martin's Personal Testing (Fitbit Dubbed Representative Infringement)

Expert Testing By Martin Is Proper

Accused Product – claim chart	Personal Testing – Martin (Philips)	Personal Testing – Paradiso (Fitbit)*
1 Ionic – Dkt. 287-1	Personally tested	
2 Versa – Dkt. 287-2		
3 Versa 2 – Dkt. 287-3	Personally tested (tracking during exercise)	
4 Versa Lite Edition – Dkt. 287-4		
5 Charge 2 – Dkt. 287-5	Personally tested	
6 Charge 3 – Dkt. 287-6		Personally tested (tracking during exercise)
7 Inspire HR – Dkt. 287-7	Personally tested	
8 Alta HR – Dkt. 287-8		
9 Blaze – Dkt. 287-9		

PHILIPS

* Philips contests that Paradiso personally did testing.

Expert Testing By Martin Is Proper

Fitbit does not contest that Phillips provided claim charts for each Accused Product during fact discovery. Fitbit does not contest that Expert Martin does the same thing, element-by-element, product-by-product.

Fitbit objects to Martin personally testing some but not all of the products, which he refers to as “representative ‘377 Devices”. Martin ¶47 (Ionic, Versa 2, Inspire HR, and Charge 2)

- ¶55: “I have personally followed the instructions...”
- ¶61: “I have personally followed the instructions as set out by Fitbit to pair each of the Representative ‘377 Devices...”

- ¶68: “Additionally, I have personally tested the Ionic ...”
- ¶70: “I have personally tested the Charge 2 and Inspire HR devices...”
- ¶81: “I have personally tested the Representative ‘377 Devices...”
- ¶85: “As noted above, I have personally tested the Representative ‘377 Devices...”

I provide the technical documentation that shows the functionality that I have personally tested in the Representative ‘377 Devices is shared by the rest of the ‘377 Devices, and I note when there are relevant differences among the different ‘377 Devices.

Dkt. 270-2 at ¶47 (Technical Documents cited at e.g., ¶¶ 51, 58, 67)

Fitbit Asserts Expert Testing Is Proper

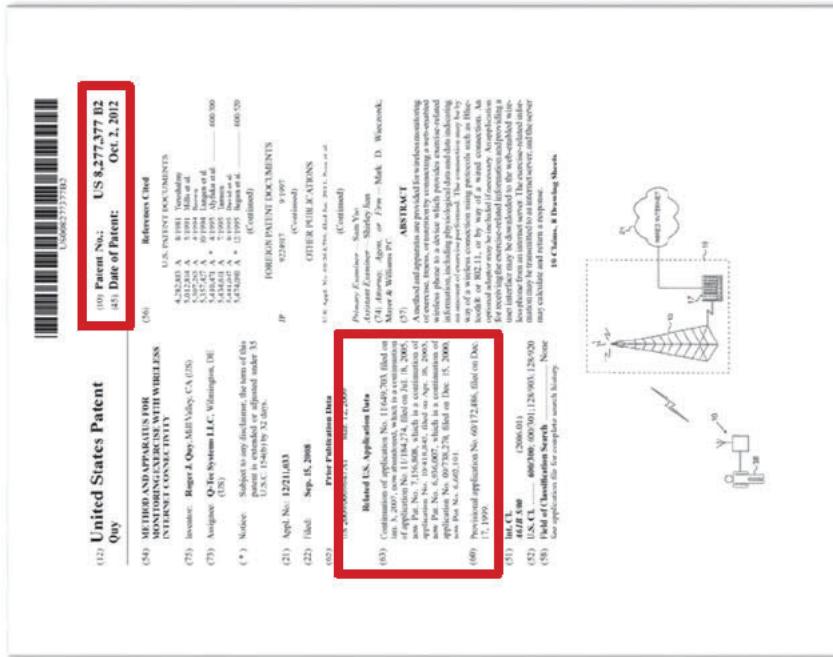

Paradiso (Fitbit):

24	Q.	And you tested five of them. Is	291
25	that right?		
1	J.	PARADISO - CONFIDENTIAL	
2	A.	Yes.	
3	Q.	Are the screenshots and pictures	
4		in this exhibit from the tests performed by	
5		counsel or from you or some combination?	
6	A.	These were performed -- these	
7		came from counsel. These are not my	
8		screenshots.	

11	Q.	Okay.	294
12		But I just wanted to verify, when	
13		you say this test confirmed that the	
14		accused Fitbit wearables still track and	
15		record a user's data during an exercise	
16		session, this test you're talking about is	
17		just the test of the Versa 2 and the Charge	
18		3, right?	
19	A.	Yes. This test refers to that.	
20	Q.	You didn't test the other 7	
21	devices?		
22	A.	Outside of range? If I did it	
23		would be in the report, the tests that were	
24		run.	
25	Q.	Okay.	
1	J.	PARADISO - CONFIDENTIAL	
2	A.	But yeah.	
3	Q.	But you think it's reasonable to	
4		conclude that by testing two of them in	
5		that way, that that would show that all of	
6		them worked in that way, is that right?	
7	A.	All of the Fitbit devices --	
8		MR. SHAW: Object to form.	
9	A.	Sorry, all of the Fitbit devices	
10		I've used and owned worked in that way and	
11		it makes sense to me that that's what they	
12		would do.	

Daubert Motion to Exclude Dr. Akemann's Testimony

License to the '191 is Comparable to the '377

(10) Patent No.:	US 8,277,377 B2
(45) Date of Patent:	Oct. 2, 2012
<hr/>	
Related U.S. Application Data	
<p>(63) Continuation of application No. 11/649,703, filed on Jan. 3, 2007, now abandoned, which is a continuation of application No. 11/184,274, filed on Jul. 18, 2005, now Pat. No. 7,156,808, which is a continuation of application No. 10/418,845, filed on Apr. 18, 2003, now Pat. <p>(60) Provisional application No. 60/172,886, filed on Dec. 17, 1999.</p>	

- (60) Provisional application No. 60/172,486, filed on Dec. 17, 1999.

PHILIPS

Fitbit incorrectly suggests that only prior licenses to the same patent are comparable.

License to the '191 is Comparable to the '377

Fitbit incorrectly suggests that only prior licenses to the same patent are comparable. Comparable licenses by definition cannot be for the same patent.

Georgia Pacific Factor 1 (prior licensing of the patent):

“The royalties received by the patentee for the **licensing of the patent in suit, proving or tending to prove an established royalty**”

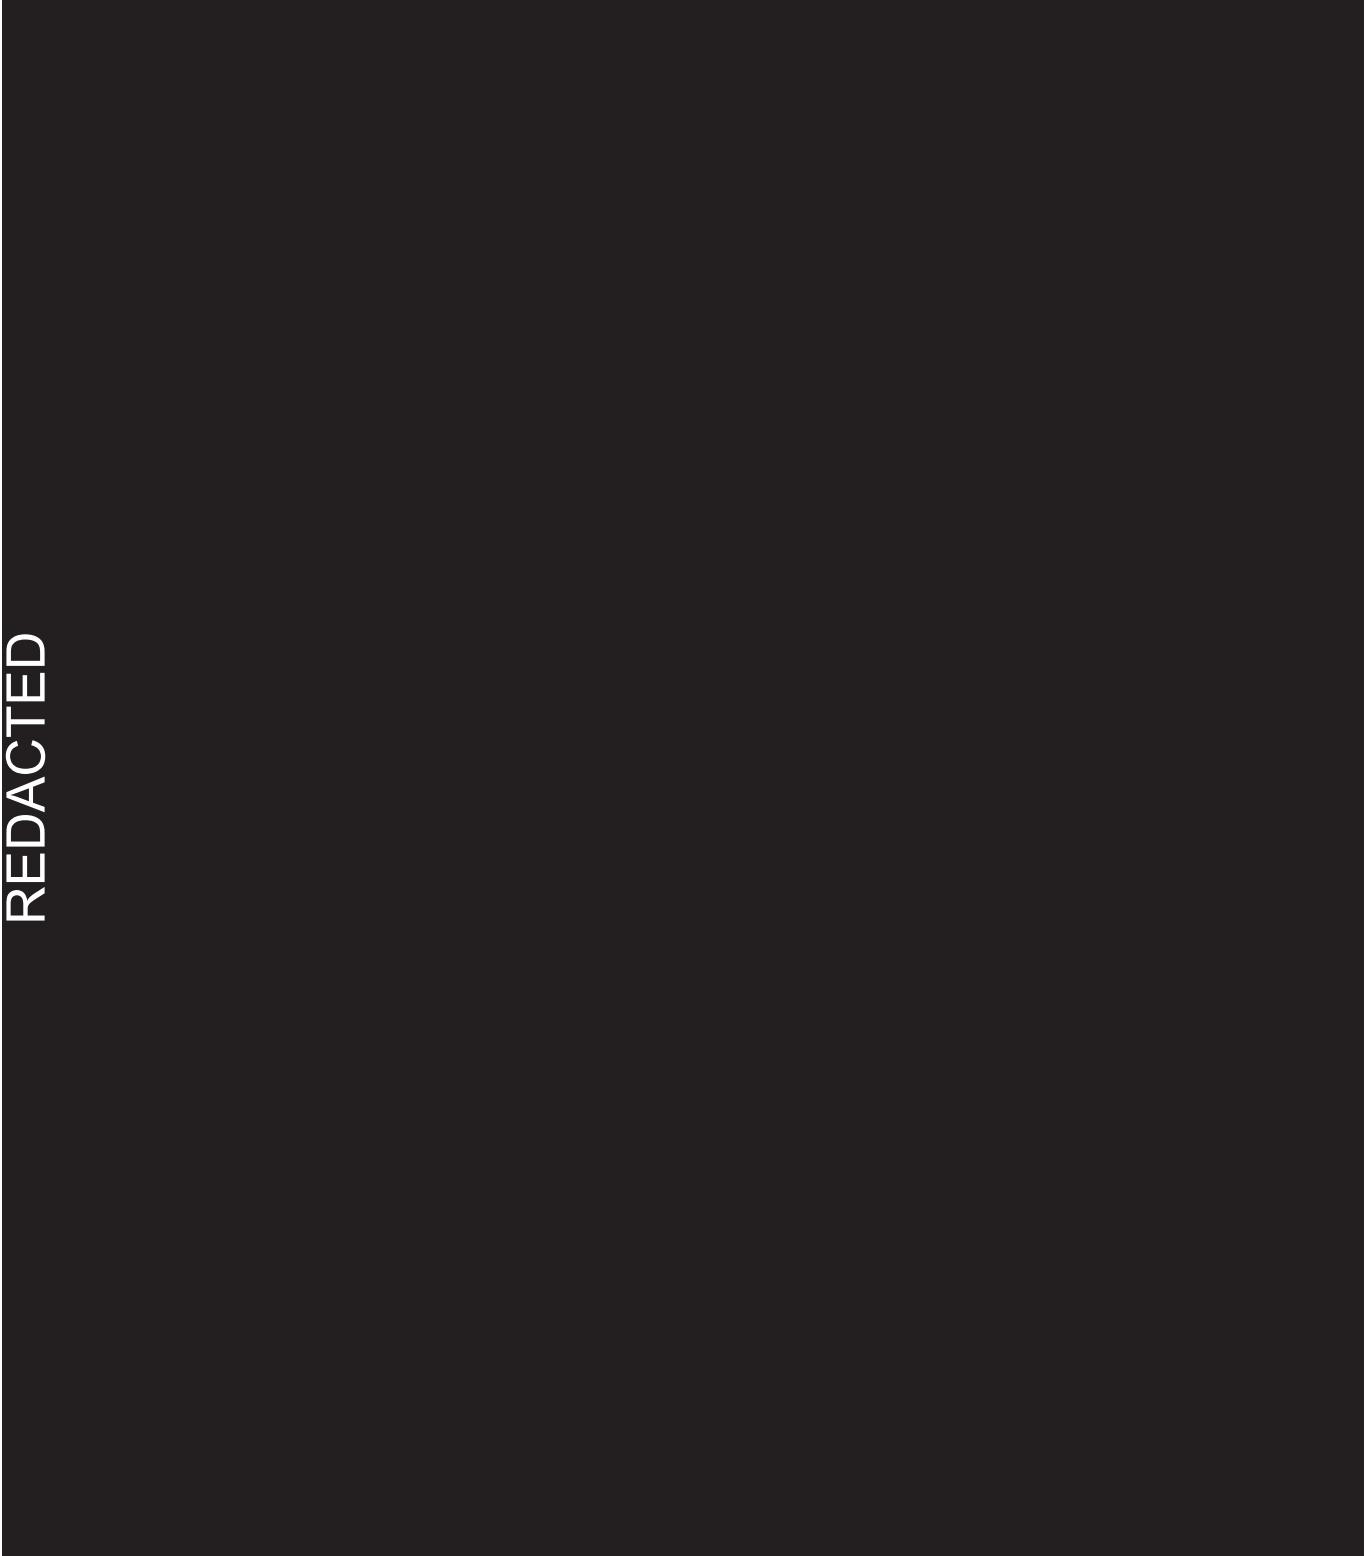

Georgia Pacific Factor 2 (prior licensing of comparable patents):

“The rates paid by the licensee for the **use of other patents comparable to the patent in suit**”

Georgia Pacific Factor 15 (hypothetical license):

“The amount that a licensor (such as a patentee) and the licensee (such as the infringer) would have agreed upon...”

Fitbit Misinterprets the Case Law

Omega Pats., LLC v. CalAmp Corp., 13 F.4th 1361, 1376-77 (Fed. Cir. 2021)

- “We have, however, explained that ‘when a sufficiently comparable license is used as the basis for determining the appropriate royalty, further apportionment may not necessarily be required.’”
- “That is because a damages theory that is dependent on a comparable license (or a comparable negotiation) may in some cases have ‘built-in apportionment.’”
- “Built-in apportionment effectively assumes that the negotiators of a comparable license settled on a royalty rate and royalty base combination embodying the value of the asserted patent.”

LaserDynamics, Inc. v. Quanta Computer, Inc., 694 F.3d 51, 69-70 (Fed. Cir. 2012)

- “Actual licenses to the patented technology are highly probative.”
- Issue only arises from “alleging a loose or vague comparability” such as to “various licenses in the same general computer field without proving a relationship to the patented technology.”

Masimo Corp. v. Philips Elecs. N. Am. Corp., 2013 WL 2178047 (D. Del. May 20, 2013)

- Prior license involved “technologies other than the patent in suit”
- “Further, nothing in the Agreement suggests Respironics or Nonin intended to include such technology.”

Cases Support Admissibility

VirnetX, Inc. v. Cisco Sys., Inc., 767 F.3d 1308 (Fed. Cir. 2014)

- “[W]e have never required identity of circumstances; on the contrary, we have long acknowledged that ‘any reasonable royalty analysis’ necessarily involves an element of approximation and uncertainty.” Permitted Expert where there were “undoubtedly differences between the licenses at issue and the circumstances.”
- “[T]he ‘degree of comparability’ of the license agreements was ‘[a] factual issue[] best addressed by cross examination and not by exclusion.’”

Bio-Rad Lab’ys, Inc. v. 10X Genomics Inc., 967 F.3d 1353 (Fed. Cir. 2020)

- “[T]he issue of comparability is often one of sufficiency of the evidence, not admissibility.”
 - “[I]n ActiveVideo, the damages expert relied on two agreements, one of which did not involve the patents or technologies in the case. We concluded that the district court did not abuse its discretion by failing to exclude the testimony of the damages expert because the ‘degree of comparability’ of the license agreements is a ‘factual issue[] best addressed by cross examination and not by exclusion.’”
 - “The ‘degree of comparability’ was appropriately left for the jury to decide.”
- Skyhook Wireless, Inc. v. Google, Inc.*, CV 10-11571-RWZ, 2015 WL 13620764 (D. Mass. Feb. 18, 2015)
- “To the extent that [defendant] disagrees with the conclusions of [plaintiff’s experts] apportionment methods, its recourse lies in cross-examination, not exclusion.”
