Maintenance Processing in the PM System

This section provides an overview of the processing of unplanned maintenance tasks in the PM System. It describes the steps that can be carried out when creating, planning, executing, controlling and analyzing these tasks, in order to make effective use of the system functionality.

[Introduction to Maintenance Processing](#)

Introduction to Maintenance Processing

Introduction

The PM System supports the planning, processing and completion of maintenance tasks for the entire plant maintenance area. It provides a step-by-step explanation of the plant maintenance processes, thereby providing the basis for rational decision-making as regards cost-intensive installations, replacement investments and changes in maintenance strategies. It distributes up-to-date information on a regular basis to all the departments concerned.

The PM System supports the creation, planning, control and analysis of all the tasks which need to be carried out in maintenance areas. These include not only unplanned tasks or those caused by malfunction, but also maintenance and inspection tasks which are planned on a regular basis. Furthermore, the PM System can also map functions such as investments, reconstructions, retooling, which although they do not belong to plant maintenance itself, need to be processed using the same procedures.

Range of Functions

Maintenance processing in the PM System comprises several steps, which, however, do not necessarily all need to be performed in full. On the one hand, the wide range of functions available enables you to process a large-scale repair with numerous planning steps such as preliminary costing, work scheduling, staging, dispatching and permits. On the other hand, the flexibility of the system allows you to react immediately in cases of damage and create the necessary orders and shop papers with a minimum number of entries in a short space of time.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
