Investor/RT Tour (MASTER INDEX)

Investor/RT is a state-of-the-art tool kit for the computerized investor. It provides powerful market monitoring, data capture, charting, technical analysis, and portfolio management features for users of a wide variety of real-time, delayed, and end-of-day market data services. Supported data services include the Signal, eSignal, and BMI data feeds from *Data Broadcasting Corporation*, DTN Spectrum and DTN Real-Time data services from *Data Transmission Network, Inc*., InterQuote, an Internet-based real time service of *Paragon Software, Inc*., and myTrack and Dial/Data, Internet-based real-time, delayed, or end-of-day quote and historical pricing services of T*rack Data Corporation*. Investor/RT will monitor and analyze any security type transmitted by your data vendor. It does not matter if the data you receive from your data service is broadcast in real time, delayed, or end-of-day. Investor/RT will report the information in the time frame in which it is provided.

Continuous feed editions of Investor/RT are available for BMI, DTN, InterQuote, myTrack, Signal, and eSignal. These editions provide real-time or delayed market data monitoring for the respective services. Internet based access to Dial/Data is also built into each continuous feed edition to facilitate historical data downloading to complement the real-time or delayed market data provided by the continuous feed data service.

Linn Software also offers an end-of-day version of Investor/RT that provides Internet access to Dial/Data for daily, weekly, and monthly historical quotes coupled with the full complement of charting and technical analysis features. The Dial/Data edition also provides downloading of news on selected ticker symbols, downloading of fundamental data on stocks, company profiles, security names, and industry groups.

Investor/RT is "cross platform" software. All editions are available

for Windows 95, Windows 98, Windows NT, and Power Macintosh platforms. The graphical user interface and product functionality are identical on each platform.
