Client-Server Multitasking

by

HARVEY LUNENFELD

5

BACKGROUND OF THE INVENTION

FIELD OF THE INVENTION

10 The present invention relates generally to clients and servers and more particularly to client-server multitasking.

BACKGROUND ART

15 Clients, servers, and client-server systems have been known. However there is a need for client-server multitasking. A client-server multitasking system and process are needed, which are capable of information and/or service retrieval from the same and/or different ones of servers substantially simultaneously and on-the-fly, using the same and/or different ones of queries, and sorting, grouping, and/or organizing responses
20 therefrom substantially on-the-fly.

A requestor and/or user should be capable of making substantially multiple simultaneous same and/or different requests of same and/or different servers. The

client server-multitasking system and process should be capable of organizing responses from the servers into service and/or information responses, and communicating the service and/or information responses to the requestors and/or users substantially simultaneously, and on-the-fly.

5

The requestors and/or users should be capable of making substantially simultaneous service and/or information requests of the same and/or different ones of servers and/or clients, using the same and/or different queries, and/or the same and/or different instructions. The client-server multitasking system and process should be capable of retrieving substantially multiple simultaneous services and/or information having the same and/or different criteria from the same and/or different servers, sorting, grouping, and/or organizing the responses from the servers and/or the clients into information and/or services responses, and communicating the service and/or information responses to the requestors and/or the users substantially simultaneously. The same and/or different ones of uniform resource locators, target resources, and/or paths may be used.

10
15

The requestors and/or the users should be capable of making multiple simultaneous searches. The searches should be capable of having at least one or a plurality of same or different queries of the same and/or different servers and/or clients. The responses from the servers and/or the clients should be capable of being organized into the service and/or information response in a variety of formats. It should be possible to sort the responses within the service and/or information response, such as, for example, by category, query, group, page, order of importance, ascending and/or descending order,

20

alphabetically and/or numerically, or other characteristics, as determined by the requestor, and/or the user, and/or the client-server multitasking system, or to combine the responses within the service and/or information response, such as, for example, interleaving the responses one with the other, such as, for example, by order of

5 relevance or other parameters. The responses should be capable of being grouped by search criteria, server, order of importance, or by numerical factors such as value, price, or other numerical quantifier. For example, the responses should be presentable, for example, in ascending or descending order in interleaved format, such as top ones, twos, threes, and so on, or presentable separately to the requestor and/or the user. The

10 order may be order of importance or relevance related, or, for example, numerically valued, such as price or stock market value.

The client-server multitasking system and process should be capable of information and/or service retrieval from the same and/or different ones of the servers substantially

15 simultaneously and on-the-fly, using the same and/or different ones of the queries, and sorting, grouping, and/or organizing responses therefrom substantially on-the-fly.

The client-server multitasking system and process should be capable of substantially multiple simultaneous searching, using the same and/or different ones of queries of the

20 same and/or different ones of the clients and/or servers, which may be search engines, and/or sites, and/or servers, and/or locations on the network, and additionally and/or alternatively building a client-server multitasking search engine and/or database. The client-server multitasking search engine and/or database should be capable of storing

the information and/or services retrieved therefrom the search engines, and/or sites,
and/or servers, and/or locations being queried on the network therein, and building the
client-server search engine and/or database. The client-server multitasking search
engine should also be capable of being queried either directly and/or in combination
5 therewith the substantially simultaneous searching, using the same and/or different
queries of the same and/or different search engines, sites, servers, and/or databases.
The client-server multitasking search engine and/or database should also be capable of
updating information and/or services stored therein by querying sites, servers, search
engines, and/or databases containing information and/or services referenced in client-
10 server multitasking search engine and/or database.

The client-server multitasking system and process should also be capable of use on a
variety of networks, such as global area networks, and in particular the internet,
metropolitan area networks, wide area networks, and local area networks.
15

The client-server multitasking system and process should be capable of substantially
simultaneous searching of the same and/or different ones of search engines and/or sites
on the network substantially on-the-fly, with the same and/or different ones of the
queries, and sorting, grouping, and/or organizing responses therefrom substantially on-
20 the-fly.

The client-server multitasking system and process should also be capable of sorting,
grouping, and/or organizing results therefrom the servers, search engines, and/or sites,

in accordance with instructions from the requestors, and/or the users, and/or instructions resident within the client-server multitasking system and/or process. The client-server multitasking system and process should also be capable drilling down and/or up to different levels within the search engines, sites, and/or servers being queried.

5

The client-server multitasking system and process should be capable of providing manual and/or timed updates. Such timed updates should allow for motion related presentation to the requestor and/or the user.

10

The client-server multitasking system and process should be capable of incorporating information and/or services therein to a variety of user interfaces at different locations therein the user interfaces, grouping, and/or organizing the information and/or services, and optionally eliminating duplicate information and/or services.

15

The client-server multitasking system and process should be capable of incorporating links, graphics, video, text, and audio, and/or combinations thereof, and selective advertising, according to selectable search, query, sorting, and/or grouping criteria, and/or combinations thereof therein to the information and/or services to be delivered thereto the user interfaces. The user should also be capable of placing orders, such as

20

purchases, and/or other types of orders, payments, confirmations thereof, and/or combinations thereof, either directly and/or therethrough servers and/or sites thereon the network.

0000000000000000

00000 000000

The client-server multitasking system should be capable of use in a variety of applications, and be capable of information comparison and/or trend analysis of information from the same and/or different sources substantially simultaneously. The client-server multitasking system should be capable of, for example, determining best query results, with respect to a plurality of search engine results; purchasing and/or price comparisons, viewing and/or reviewing prices/values and trends for different sites, determining lowest costs and lowest cost analyses for wholesale and retail purposes; product availability, e.g., airline tickets, pricing, and ticket availability, from different airlines to the same and/or different locations; purchasing of commodities and/or stocks form the same and/or different sites with updates every few seconds and/or minutes; obtaining prices and/or values in different stock markets substantially simultaneously; and searching for jobs on the same and/or different job sites, using the same and/or different job criteria, for example, on a daily basis, the job sites having changing job availability; and/or a combination thereof, all substantially simultaneously. The client-server multitasking system should be capable of presenting information and/or services for review and/or updating from the same and/or different ones of sites, servers, and/or applications substantially simultaneously, and trend analysis thereof, using a variety of sorting, grouping and/or organizing criteria, according to the needs of the requestor, and/or the user, and/or resident within the client-server multitasking system.

20

A client server-multitasking system and process are needed, which are capable of service and/or information retrieval from at least one server, organization, communication, and presentation of such services and/or information to at least one

00000000000000000000000000000000

requestor, and/or the user, and/or optional storage, and/or retrieval of such services
and/or information from the optional storage. The client-server multitasking system
and process should be capable of building a client-server multitasking system search
engine and/or database therefrom responses returned from the servers, search engines,
5 and/or sites being queried and/or searched, and/or having requests made thereof. The
client-server multitasking system search engine and/or database having stored
information and/or services therein should also be searchable, be capable of full text
searches thereof, and be searchable by the servers and/or the clients on the network,
either separately and/or in combination therewith the substantially simultaneous
10 multiple same and/or different searches and/or queries of the same and/or different
servers on the network. Information therein the client-server multitasking system
search engine and/or database should also be searchable and/or retrievable, and should
be capable of being incorporated therein the service and/or information responses
delivered thereto the user interfaces, according to search criteria, selectively and/or
15 automatically, by the requestor, and/or the user. The client-server multitasking system
search engine and/or database should also be capable of spidering, and/or robbing,
and/or querying sites, services and/or information to be stored therein and/or stored
therein the client-server multitasking system search engine and/or database, and
updating the services and/or information to be stored and/or stored therein the client-
20 server multitasking system search engine and/or database.

The client-server multitasking system and process should be capable of retrieving,
parsing, processing, formatting, organizing, grouping, sorting, and consolidating

00000-00000000

services and/or information therefrom the same and/or different ones of the servers and/or clients having the same and/or different structures, formats, organizations, groupings, and/or data structures, and incorporating the parsed, processed, formatted, organized, grouped, sorted, and consolidated services and/or information thereinto user
5 responses for delivery to and use by the requestors and/or users.

For the foregoing reasons, there is a need for a client-server multitasking system and process capable of information and/or service retrieval from the same and/or different ones of servers substantially simultaneously and on-the-fly, using the same and/or
10 different ones of queries of the same and/or different ones of the servers, and sorting, grouping, and/or organizing responses therefrom substantially on-the-fly, and communicating service and/or information responses to the requestors and/or users substantially simultaneously and on-the-fly. The client-server multitasking system and process should be capable of use on a variety of networks, such as global area networks,
15 and in particular the internet, metropolitan area networks, wide area networks, and local area networks, and be capable of searching search engines and/or other sites substantially simultaneously and on-the-fly. The client-server multitasking system and process should be capable of sorting, grouping, and/or organizing results therefrom the servers, search engines, and/or sites, in accordance with instructions from the
20 requestors, and/or the users, and/or instructions resident within the client-server multitasking system and/or process. The client-server multitasking system should also be capable of use in a variety of applications, and capable of information comparison and/or trend analysis of information from the same and/or different sources

substantially simultaneously. The client-server multitasking system and process should also be capable of building a client-server multitasking system search engine and/or database therefrom responses returned from the servers, search engines, and/or sites being queried and/or searched, and/or having requests made thereof, be capable of being
5 searched and/or queried, querying sites referenced therein the client-server multitasking system search engine and/or database, and updating information and/or services stored therein. The client-server multitasking system and process should be capable of retrieving, parsing, processing, formatting, organizing, grouping, sorting, and consolidating services and/or information therefrom the same and/or different ones of
10 the servers and/or clients having the same and/or different structures, formats, organizations, groupings, and/or data structures, and incorporating the parsed, processed, formatted, organized, grouped, sorted, and consolidated services and/or information thereinto user responses for delivery to and use by the requestors and/or users.

15

SUMMARY

The present invention is directed to a client-server multitasking system and process capable of information and/or service retrieval from the same and/or different ones of
5 servers substantially simultaneously and on-the-fly, using the same and/or different ones of queries of the same and/or different ones of the servers, and sorting, grouping, and/or organizing responses therefrom substantially on-the-fly, and communicating service and/or information responses to the requestors and/or users substantially simultaneously and on-the-fly. The client-server multitasking system and process is capable of use on a
10 variety of networks, such as global area networks, and in particular the internet, metropolitan area networks, wide area networks, and local area networks, and be capable of searching search engines and/or other sites substantially simultaneously and on-the-fly.

15 The client-server multitasking system and process is capable of retrieving substantially multiple simultaneous services and/or information having the same and/or different criteria from the same and/or different servers, sorting, grouping, and/or organizing the responses from the servers and/or the clients into information and/or services responses, and communicating the service and/or information responses to the requestors and/or
20 the users substantially simultaneously. The requestors and/or the users may make substantially simultaneous service and/or information requests of servers and clients, using the same and/or different queries, and/or the same and/or different instructions.

00000: 0100450

The same and/or different uniform resource locators, target resources, and/or paths may be used.

The client-server multitasking system and process is capable of making multiple
5 substantially simultaneous same and/or different requests of same and/or different servers, organizing responses from the servers into service and/or information responses, and communicating the service and/or information responses to the requestors and/or the users substantially simultaneously.

10 The client-server multitasking system and process is also capable of sorting, grouping, and/or organizing results therefrom the servers, search engines, and/or sites, in accordance with instructions from the requestors and/or the users, and/or instructions resident within the client-server multitasking system and/or process. The client-server multitasking system is capable of use in a variety of applications, and is capable of
15 information comparison and/or trend analysis of information from the same and/or different sources substantially simultaneously. The client-server multitasking system and process is also be capable of building a client-server multitasking system search engine and/or database therefrom responses returned from the servers, search engines, and/or sites being queried and/or searched, and/or having requests made thereof, be
20 capable of being searched and/or queried, querying sites referenced therein the client-server multitasking system search engine and/or database, and updating information and/or services stored therein.

The client-server multitasking system and process are capable of information and/or service retrieval from the same and/or different ones of servers substantially simultaneously and on-the-fly, using the same and/or different ones of queries, and sorting, grouping, and/or organizing responses therefrom substantially on-the-fly.

5

A requestor and/or user is capable of making substantially multiple simultaneous same and/or different requests of same and/or different servers. The client server-multitasking system and process is capable of organizing responses from the servers into service and/or information responses, and communicating the service and/or information responses to the requestors and/or the users substantially simultaneously, and on-the-fly.

10

The requestors and/or users are capable of making substantially simultaneous service and/or information requests of the same and/or different ones of servers and/or clients, using the same and/or different queries, and/or the same and/or different instructions.

15

The client-server multitasking system and process is capable of retrieving substantially multiple simultaneous services and/or information having the same and/or different criteria from the same and/or different servers, sorting, grouping, and/or organizing the responses from the servers and/or the clients into information and/or services responses, and communicating the service and/or information responses to the requestors and/or the users substantially simultaneously. The same and/or different ones of uniform resource locators, target resources, and/or paths may be used.

20

00000 00000

5 The requestors and/or users are capable of making multiple simultaneous searches. The searches may have at least one or a plurality of same or different queries of the same and/or different servers and/or clients. The responses from the servers and/or the clients may be of being organized into the service and/or information response in a variety of formats. The responses may be sorted within the service and/or information response, such as, for example, by category, query, group, page, order of importance, ascending and/or descending order, alphabetically and/or numerically, or other characteristics, as determined by the requestor, and/or the user, and/or the client-server multitasking system, and/or the responses may be combined within the service and/or information response, such as, for example, interleaving the responses one with the other, such as,
10 for example, by order of relevance or other parameters. The responses may also be capable of being grouped by search criteria, server, order of importance, or by numerical factors such as value, price, or other numerical quantifier. For example, the responses may be presentable, for example, in ascending or descending order in
15 interleaved format, such as top ones, twos, threes, and so on, or presentable separately to the requestor and/or the user. The order may be order of importance or relevance related, or, for example, numerically valued, such as price or stock market value.

20 The client-server multitasking system and process is be capable of information and/or service retrieval from the same and/or different ones of the servers substantially simultaneously and on-the-fly, using the same and/or different ones of the queries, and sorting, grouping, and/or organizing responses therefrom substantially on-the-fly.

The client-server multitasking system and process is capable of substantially multiple simultaneous searching, using the same and/or different ones of queries of the same and/or different ones of the clients and/or servers, which may be search engines, and/or sites, and/or servers, and/or locations on the network, and additionally and/or 5 alternatively building a client-server multitasking search engine and/or database. The client-server multitasking search engine and/or database is capable of storing the information and/or services retrieved therefrom the search engines, and/or sites, and/or servers, and/or locations being queried on the network therein, and building the client-server search engine and/or database. The client-server multitasking search engine 10 should is also capable of being queried either directly and/or in combination therewith the substantially simultaneous searching, using the same and/or different queries of the same and/or different search engines, sites, servers, and/or databases. The client-server multitasking search engine and/or database should is also capable of updating information and/or services stored therein by querying sites, servers, search engines, 15 and/or databases containing information and/or services referenced in client-server multitasking search engine and/or database.

The client-server multitasking system and process is also capable of use on a variety of networks, such as global area networks, and in particular the internet, metropolitan area 20 networks, wide area networks, and local area networks.

The client-server multitasking system and process are capable of substantially simultaneous searching of the same and/or different ones of search engines and/or sites

on the network substantially on-the-fly, with the same and/or different ones of the queries, and sorting, grouping, and/or organizing responses therefrom substantially on-the-fly.

5 The client-server multitasking system and process are also capable of sorting, grouping, and/or organizing results therefrom the servers, search engines, and/or sites, in accordance with instructions from the requestors, and/or instructions resident within the client-server multitasking system and/or process. The client-server multitasking system and process are also capable drilling down and/or up to different levels within the
10 search engines, sites, and/or servers being queried.

The client-server multitasking system and process are capable of providing manual and/or timed updates. Such timed updates allow for motion related presentation to the requestor and/or the user.

15 The client-server multitasking system and process are capable of incorporating information and/or services thereinto a variety of user interfaces at different locations therein the user interfaces, grouping, and/or organizing the information and/or services, and optionally eliminating duplicate information and/or services.

20 The client-server multitasking system and process are capable of incorporating links, graphics, video, text, and audio, and/or combinations thereof, and selective advertising, according to selectable search, query, sorting, and/or grouping criteria, and/or

combinations thereof thereinto the information and/or services to be delivered thereto the user interfaces. The requestor and/or the user may place orders, such as purchases, and/or other types of orders, payments, confirmations thereof, and/or combinations thereof, either directly and/or therethrough servers and/or sites thereon the network.

5

The client-server multitasking system is capable of use in a variety of applications, and is capable of information comparison and/or trend analysis of information from the same and/or different sources substantially simultaneously. The client-server multitasking system is capable of, for example, determining best query results, with
10 respect to a plurality of search engine results; purchasing and/or price comparisons, viewing and/or reviewing prices/values and trends for different sites, determining lowest costs and lowest cost analyses for wholesale and retail purposes; product availability, e.g., airline tickets, pricing, and ticket availability, from different airlines to the same and/or different locations; purchasing of commodities and/or stocks from the
15 same and/or different sites with updates every few seconds and/or minutes; obtaining prices and/or values in different stock markets substantially simultaneously; and searching for jobs on the same and/or different job sites, using the same and/or different job criteria, for example, on a daily basis, the job sites having changing job availability; and/or a combination thereof, all substantially simultaneously. The client-server
20 multitasking system is capable of presenting information and/or services for review and/or updating from the same and/or different ones of sites, servers, and/or applications substantially simultaneously, and trend analysis thereof, using a variety of

00000000000000000000000000000000

sorting, grouping and/or organizing criteria, according to the needs of the requestor, and/or the user, and/or resident within the client-server multitasking system.

The client server-multitasking system and process are capable of service and/or
5 information retrieval from at least one server, organization, communication, and
presentation of such services and/or information to at least one requestor and/or user,
and/or optional storage, and/or retrieval of such services and/or information from the
optional storage. The client-server multitasking system and process are capable of
building a client-server multitasking system search engine and/or database therefrom
10 responses returned from the servers, search engines, and/or sites being queried and/or
searched, and/or having requests made thereof. The client-server multitasking system
search engine and/or database having stored information and/or services therein are also
searchable, are capable of full text searches thereof, and are searchable by the servers
and/or the clients on the network, either separately and/or in combination therewith the
15 substantially simultaneous multiple same and/or different searches and/or queries of the
same and/or different servers on the network. Information therein the client-server
multitasking system search engine and/or database are also searchable and/or
retrievable, and are capable of being incorporated therein the service and/or information
responses delivered thereto the user interfaces, according to search criteria, selectively
20 and/or automatically, by the requestor and/or the user. The client-server multitasking
system search engine and/or database are capable of spidering, and/or roboting, and/or
querying sites, services and/or information to be stored therein and/or stored therein the
client-server multitasking system search engine and/or database, and updating the

00000 00000 00000

services and/or information to be stored and/or stored therein the client-server multitasking system search engine and/or database.

The client-server multitasking system and process are capable of retrieving, parsing,
5 processing, formatting, organizing, grouping, sorting, and consolidating services and/or
information therefrom the same and/or different ones of the servers and/or clients
having the same and/or different structures, formats, organizations, groupings, and/or
data structures, and incorporating the parsed, processed, formatted, organized, grouped,
sorted, and consolidated services and/or information thereinto user responses for
10 delivery to and use by the requestors and/or users.

The client-server multitasking system and process, then, are capable of information
and/or service retrieval from the same and/or different ones of servers substantially
simultaneously and on-the-fly, using the same and/or different ones of queries of the
15 same and/or different ones of the servers, and sorting, grouping, and/or organizing
responses therefrom substantially on-the-fly, and communicating service and/or
information responses to the requestors and/or users substantially simultaneously and
on-the-fly. The client-server multitasking system and process are capable of use on a
variety of networks, such as global area networks, and in particular the internet,
20 metropolitan area networks, wide area networks, and local area networks, and are
capable of searching search engines and/or other sites substantially simultaneously and
on-the-fly. The client-server multitasking system and process are capable of sorting,
grouping, and/or organizing results therefrom the servers, search engines, and/or sites,

00000 644750

in accordance with instructions from the requestors, and/or users, and/or instructions resident within the client-server multitasking system and/or process. The client-server multitasking system is capable of use in a variety of applications, and capable of information comparison and/or trend analysis of information from the same and/or
5 different sources substantially simultaneously. The client-server multitasking system and process are capable of building a client-server multitasking system search engine and/or database therefrom responses returned from the servers, search engines, and/or sites being queried and/or searched, and/or having requests made thereof, is capable of being searched and/or queried, querying sites referenced therein the client-server
10 multitasking system search engine and/or database, and updating information and/or services stored therein. The client-server multitasking system and process are capable of retrieving, parsing, processing, formatting, organizing, grouping, sorting, and consolidating services and/or information therefrom the same and/or different ones of the servers and/or clients having the same and/or different structures, formats,
15 organizations, groupings, and/or data structures, and incorporating the parsed, processed, formatted, organized, grouped, sorted, and consolidated services and/or information thereinto user responses for delivery to and use by the requestors and/or users.

20 A multitasking process having features of the present invention comprises: parsing, processing, and/or formatting a service and/or information request thereinto a current request group; opening connections therewith and making at least one request thereof at least one server; parsing, processing, formatting, grouping, and/or organizing at least

02003 0447760

- one response therefrom the at least one server thereinto at least one addressable response information group; formulating information therefrom the current request group thereinto a request pointer/address group having at least one pointer/address; formulating at least one addressable query pointer/address group having at least one other pointer/address; incorporating information and/or services therefrom the at least one addressable response information group thereinto at least one addressable query information group; and incorporating the at least one addressable query information group thereinto a service and/or information response.
- 5
- 10 A client-server multitasking system having features of the present invention comprises: means for parsing, processing, and/or formatting a service and/or information request thereinto a current request group; means for opening connections therewith and making at least one request thereof at least one server; means for parsing, processing, formatting, grouping, and/or organizing at least one response therefrom the at least one
- 15 server thereinto at least one addressable response information group; means for formulating information therefrom the current request group thereinto a request pointer/address group having at least one pointer/address; means for formulating at least one addressable query pointer/address group having at least one other pointer/address; means for incorporating information and/or services therefrom the at least one
- 20 addressable response information group thereinto at least one addressable query information group; and means for incorporating the at least one addressable query information group thereinto a service and/or information response.

- FIG. 86 is a schematic representation of information that may be used for
formulating a typical particular one of the requests $Q_{n1} \dots Q_{nm}$, designated as
the request Q_{nm} , and optional instructions $VJ_{nm1} \dots VJ_{nk}$ from the particular
service and/or information request IQ_n and opening a connection OC_{nm} ;
- 5 FIG. 87 is a schematic representation of information that may be used for
formulating the typical particular one of the requests $Q_{n1} \dots Q_{nm}$, designated as
the request Q_{nm} , and the optional instructions $VJ_{nm1} \dots VJ_{nk}$ from the
particular user service and/or information request iq_n and opening the
connection OC_{nm} ;
- 10 FIG. 88 is an alternate schematic representation of information that may be used for
formulating the typical particular one of the requests $Q_{n1} \dots Q_{nm}$, designated as
the request Q_{nm} , and optional instructions $VJ_{nm1} \dots VJ_{nk}$ from the particular
service and/or information request IQ_n and opening a connection OC_{nm} of
FIG. 86;
- 15 FIG. 89 is an alternate schematic representation of information that may be used for
formulating the typical particular one of the requests $Q_{n1} \dots Q_{nm}$, designated as
the request Q_{nm} , and the optional instructions $VJ_{nm1} \dots VJ_{nk}$ from the
particular user service and/or information request iq_n and opening the
connection OC_{nm} of FIG. 87;
- 20 FIG. 90 is a schematic representation of queries $QQ_{n1} \dots QQ_{nm}$, corresponding
server addresses $AQ_{n1} \dots AQ_{nm}$, and optional instructions $VJ_{nm1} \dots VJ_{nk}$ that
may be parsed, processed, and/or formatted from the service and/or

information request \mathbf{IQ}_n and/or the user service and/or information request \mathbf{iq}_n ;

FIG. 91 is a schematic representation of a request pointer/address group \mathbf{QZ}_{ns} ,
having a particular one of query pointer/address groups $\mathbf{QG}_{n1} \dots \mathbf{QG}_{nz}$,
5 designated as the query pointer/address group \mathbf{QG}_{nz} , associated ones of the
addressable response information groups $\mathbf{RG}_{n1} \dots \mathbf{RG}_{nm}$, the
pointers/addresses $\mathbf{PP}_{n11} \dots \mathbf{PP}_{nmr}$, and the query information group \mathbf{GI}_{nz}
associated therewith the query pointer/address group \mathbf{QG}_{nz} ;

FIG. 92 is a schematic representation of a sorting criteria addressing scheme having
10 a particular query pointer/address group \mathbf{QG}_{nz} , associated ones of response
information groups \mathbf{RG}_{nm} , and query information group \mathbf{GI}_{nz} associated
therewith the query pointer/address group \mathbf{QG}_{nz} ;

FIG. 93 is a schematic representation of an alternate sorting criteria addressing
15 scheme having a particular query pointer/address group \mathbf{QG}_{nz} , associated ones
of response information groups \mathbf{RG}_{nm} , and query information group \mathbf{GI}_{nz}
associated therewith the query pointer/address group \mathbf{QG}_{nz} ;

FIG. 94 is a schematic representation of typical ones of the query pointer/address
20 groups $\mathbf{QG}_{n1} \dots \mathbf{QG}_{nz}$, having the sorting criteria addressing scheme of FIG.
92, having typical ones of queries $\mathbf{QQ}_{n1} \dots \mathbf{QQ}_{nz}$ and corresponding server
addresses $\mathbf{AQ}_{n1} \dots \mathbf{AQ}_{nz}$ associated therewith;

FIG. 95 is another schematic representation of the typical ones of the query
pointer/address groups $\mathbf{QG}_{n1} \dots \mathbf{QG}_{nz}$, having the sorting criteria addressing
scheme of FIG. 92, having the typical ones of the of queries $\mathbf{QQ}_{n1} \dots \mathbf{QQ}_{nz}$

2025 RELEASE UNDER E.O. 14176

and the corresponding ones of the server addresses $AQ_{n1} \dots AQ_{nz}$ of FIG. 94 associated therewith;

FIG. 96 is a generic schematic representation of the query pointer/address groups

$QG_{n1} \dots QG_{nz}$, having the sorting criteria addressing scheme of FIG. 92,

5 having the ones of queries $QQ_{n1} \dots QQ_{nz}$ and the corresponding ones of the server addresses $AQ_{n1} \dots AQ_{nz}$ associated therewith;

FIG. 97 is a schematic representation of a request Q_{nm} of the client-server multitasking system;

FIG. 98 is a schematic representation of a response R_{nm} of the client-server
10 multitasking system;

FIG. 99 is a schematic representation of an entity body RH_{nm} of the response R_{nm} of FIG. 98 having optional response individual information groups
 $LS_{nm1} \dots LS_{nmr}$, and/or optional information LI_{nm} ;

FIG. 100 is a schematic representation of the addressable response information
15 group RG_{nm} having the addressable individual information groups
 $LG_{nm1} \dots LG_{nmr}$ parsed, and/or processed, and/or formatted, and/or organized,
and/or grouped thereinto the addressable response information group RG_{nm}
therefrom the optional entity body RH_{nm} of FIG. 99;

FIG. 101 is a schematic representation of the optional response individual
20 information group LS_{nmr} parsed, and/or processed, and/or formatted, and/or
organized, and/or grouped thereinto the addressable individual information
group LG_{nmr} ;

9220-0107-00

FIG. 102 is a schematic representation of the optional links $LD_{nm1} \dots LD_{nmr}$, and/or the optional descriptions $DD_{nm1} \dots DD_{nmr}$, and/or the optional prices/values $PD_{nm1} \dots PD_{nmr}$, and/or the optional images $ID_{nm1} \dots ID_{nmr}$ parsed individually and/or separately, and incorporated therein to the addressable response information group RG_{nm} therefrom the optional entity body RH_{nm} ;

5

FIGS. 103 is a schematic representation of a typical one of the addressable query information group GI_{nz} , based upon certain sorting and/or grouping criteria, having the labelled individual information groups $LL_{nz1} \dots LL_{nzu}$, the optional database labelled individual information groups $RL_{nz1} \dots RL_{nzk}$, the optional query description QT_{nz} , the optional server descriptions and/or links $ST_{nz1} \dots ST_{nzf}$, and the optional advertisements and/or links $LT_{nz1} \dots LT_{nzt}$ incorporated therein to certain typical ones of the typical service and/or information response forms IS_n of FIGS. 27-52.

10

FIGS. 104 is a another schematic representation of a typical one of the addressable query information group GI_{nz} , based upon certain sorting and/or grouping criteria, having the labelled individual information groups $LL_{nz1} \dots LL_{nzu}$, the optional database labelled individual information groups $RL_{nz1} \dots RL_{nzk}$, the optional query description QT_{nz} , the optional server descriptions and/or links $ST_{nz1} \dots ST_{nzf}$, and the optional advertisements and/or links $LT_{nz1} \dots LT_{nzt}$ incorporated therein to certain typical ones of the typical service and/or information response forms IS_n of FIGS. 27-52.

15

DESCRIPTION

The preferred embodiments of the present invention will be described with reference to
5 ~~FIGS. 1-104~~ ^{FIGS. 1-141} of the drawings. Identical elements in the various figures are identified
with the same reference alphanumeric.

I. SYSTEM

A. OVERVIEW

10 FIGS. 1 and 2 show a client-server multitasking system **10** of the present invention,
having requestors $U_1 \dots U_n$ (**12**), hereinafter called users $U_1 \dots U_n$ (**12**), corresponding
user interfaces $I_1 \dots I_n$ (**14**), corresponding clients $C_1 \dots C_n$ (**16**), server **PS** (**18**), servers
S₁...**S**_z (**20**), and optional servers **SO**₁...**SO**_p (**22**), constructed in accordance with the
present invention, which reside on a network **24**. Each of the users $U_1 \dots U_n$ (**12**)
15 communicate with the corresponding clients $C_1 \dots C_n$ (**16**) therethrough the
corresponding user interfaces $I_1 \dots I_n$ (**14**).

Each of the users $U_1 \dots U_n$ (**12**) enter corresponding user inputs $UI_1 \dots UI_n$ (**25**) having
one or more same and/or different user requests $qu_{11} \dots qu_{nu}$ (**26**) therein to the
20 corresponding user interfaces $I_1 \dots I_n$ (**14**), as shown in FIG. 3. The user requests
 $qu_{11} \dots qu_{nu}$ (**26**) are communicated from the user interfaces $I_1 \dots I_n$ (**14**) to the
corresponding clients $C_1 \dots C_n$ (**16**) within corresponding user service and/or
information requests $iq_1 \dots iq_n$ (**27**), having the user requests $qu_{11} \dots qu_{nu}$ (**26**) and

00000-000000000

other optional information. The users $U_1 \dots U_n$ (12) may enter the corresponding user inputs $UI_1 \dots UI_n$ (25) at the same and/or different times.

Each of the user interfaces $I_1 \dots I_n$ (14) communicate the user service and/or information requests $iq_1 \dots iq_n$ (27) thereto the corresponding clients $C_1 \dots C_n$ (16), which optionally format the corresponding user service and/or information requests $iq_1 \dots iq_n$ (27) into corresponding service and/or information requests $IQ_1 \dots IQ_n$ (28), as required. Each of the service and/or information requests $IQ_1 \dots IQ_n$ (28) have information therein that may be used to formulate one or more same and/or different requests $Q_{11} \dots Q_{nm}$ (29) to be made of one or more of the same and/or different ones of the servers $S_1 \dots S_z$ (20), which may hereinafter be called server designations $S_{11} \dots S_{nm}$ (30), in accordance with a designation scheme which designates the servers $S_1 \dots S_z$ (20) to be communicated with corresponding to the requests $Q_{11} \dots Q_{nm}$ (29) as the corresponding server designations $S_{11} \dots S_{nm}$ (30), as shown in FIGS. 2 and 4. FIG. 4 shows the server designations $S_{11} \dots S_{nm}$ (30) for typical ones of the requests $Q_{11} \dots Q_{nm}$ (29) and a typical one of the servers S_z (20). Each of the requests $Q_{11} \dots Q_{nm}$ (29) may be the same and/or different one from the other and may be made of the same and/or different ones of the servers $S_1 \dots S_z$ (20) at the same time and/or different times.

Each of the service and/or information requests $IQ_1 \dots IQ_n$ (28) may be communicated thereto the server PS (18), which parses, processes, and/or formats the service and/or information requests $IQ_1 \dots IQ_n$ (28) into the requests $Q_{11} \dots Q_{nm}$ (29).

00000 01204000

The corresponding clients $C_1...C_n$ (16) may also and/or alternatively optionally parse, process, and/or format the corresponding user service and/or information requests $iq_1...iq_n$ (27) into one or more of the same and/or different requests $Q_{11}...Q_{nm}$ (29) to be made of one or more of the same and/or different ones of the servers $S_1...S_z$ (20), in accordance with the designation scheme corresponding to the corresponding ones of the server designations $S_{11}...S_{nm}$ (30), as required.

Certain ones of the clients $C_1...C_n$ (16) may communicate corresponding certain ones of the service and/or information requests $IQ_1...IQ_n$ (28) to the server PS (18), which parses, processes and/or formats the certain ones of the service and/or information requests $IQ_1...IQ_n$ (28) into certain ones of the requests $Q_{11}...Q_{nm}$ (29), as required, and communicates the certain ones of the requests $Q_{11}...Q_{nm}$ (29) to the servers $S_1...S_z$ (20), in accordance with the designation scheme corresponding to the corresponding certain ones of the server designations $S_{11}...S_{nm}$ (30).

Alternate ones of the clients $C_1...C_n$ (16) may communicate corresponding alternate ones of the requests $Q_{11}...Q_{nm}$ (29) to corresponding alternate ones of the servers $S_1...S_z$ (20), in accordance with the designation scheme corresponding to the corresponding alternate ones of the server designations $S_{11}...S_{nm}$ (30).

Other alternate ones of the clients $C_1...C_n$ (16) may communicate corresponding other alternate ones of the service and/or information requests $IQ_1...IQ_n$ (28) to the server PS (18), which parses, processes and/or formats the other alternate ones of the service

and/or information requests **IQ₁...IQ_n** (28) into other alternate ones of the requests **Q₁₁...Q_{nm}** (29), as required, communicates the other alternate ones of the requests **Q₁₁...Q_{nm}** (29) to corresponding other alternate ones of the servers **S₁...S_z** (20), in accordance with the designation scheme corresponding to the corresponding other

5 alternate ones of the server designations **S₁₁...S_{nm}** (30); and additionally the other alternate ones of the clients **C₁...C_n** (16) may also parse, process, and/or format the user service and/or information requests **iq₁...iq_n** (27) into one or more of the same and/or different yet other alternate ones of the requests **Q₁₁...Q_{nm}** (29), and communicate the yet other alternate ones of the requests **Q₁₁...Q_{nm}** (29) to

10 corresponding yet other alternate ones of the servers **S₁...S_z** (20), in accordance with the designation scheme corresponding to the corresponding yet other alternate ones of the server designations **S₁₁...S_{nm}** (30).

Each of the service and/or information requests **IQ₁...IQ_n** (28) may, thus, be

15 communicated therefrom the corresponding clients **C₁...C_n** (16) to the server **PS** (18). The requests **Q₁₁...Q_{nm}** (29) may be communicated therefrom the server **PS** (18) and/or therefrom the corresponding clients **C₁...C_n** (16) to the servers **S₁...S_z** (20), and may depend upon instructions from and/or generated by the corresponding users **U₁...U_n** (12), and/or the corresponding user interfaces **I₁...I_n** (14) and/or the

20 corresponding clients **C₁...C_n** (16), and/or information generated by the server **PS** (18) and/or the servers **S₁...S_z** (20), and/or ancillary instructions, a combination thereof, and/or other suitable means.

C. TYPICAL COMPLETED SERVICE AND/OR INFORMATION ENTRY REQUEST

FORMS

FIGS. 11-26 show typical ones of completed service and/or information entry request forms $IF_1 \dots IF_n$ (230) at the user interfaces $I_1 \dots I_n$ (14).

5

FIG. 11 shows a typical particular one of the completed service and/or information entry request forms $IF_1 \dots IF_n$ (230), hereinafter designated the completed service and/or information entry request form IF_n (230), at a particular one of the user interfaces $I_1 \dots I_n$ (14), hereinafter designated the user interface I_n (14), having same and different ones of the typical queries $QQ_{n1} \dots QQ_{nm}$ (53), different ones of the typical server addresses $AQ_{n1} \dots AQ_{nm}$ (54), and the typical optional instructions $VJ_{n1} \dots VJ_{nk}$ (52). Typical same ones of the typical queries $QQ_{n1} \dots QQ_{nm}$ (53), are “Cat”, “Dog”, and “Mouse”, which are different one from the other.

10

15

FIG. 12 shows the typical completed service and/or information entry request forms IF_n (230), at the user interface I_n (14), having same and different ones of the typical queries $QQ_{n1} \dots QQ_{nm}$ (53), different ones of the typical server addresses $AQ_{n1} \dots AQ_{nm}$ (54), and the typical optional instructions $VJ_{n1} \dots VJ_{nk}$ (52). Typical same ones of the typical queries $QQ_{n1} \dots QQ_{nm}$ (53) are “Cat”, “Dog”, and “Mouse”, which are different one from the other. Typical same ones of the typical server addresses $AQ_{n1} \dots AQ_{nm}$ (54) are “HotBot”, “WebCrawler”, and “Dejanews”, which are different one from the other, and which are also different from “Yahoo” and “LookSmart”. The typical optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) have 5 “URL’s per Search Engine”, which instructs the

20

client **C_n (16)** and/or the server **PS (18)** to return the typical user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)** having 5 “URL’s per Search Engine”, rather than 10 “URL’s per Search Engine”, as instructed in FIG. 11.

5

FIG. 13 shows the typical completed service and/or information entry request forms **IF_n (230)**, at the user interface **I_n (14)** having a single typical one of the typical queries **QQ_{n1}...QQ_{nm} (53)** as “Big Elephants”.

10 FIGS. 14A, 14B, and 14C show the typical completed service and/or information entry request form **IF_n (230)**, at the user interface **I_n (14)**, having same and different ones of the typical queries **QQ_{n1}...QQ_{nm} (53)**, different ones of the typical server addresses **AQ_{n1}...AQ_{nm} (54)**, and the typical optional instructions **VJ_{n1}...VJ_{nk} (52)**, showing “Current Group” as “Group I”, “Group II”, and “Group III”, in FIGS. 14A, 14B, and

15 14C, respectively. Typical same ones of the typical queries **QQ_{n1}...QQ_{nm} (53)** are “Catcher in the Rye”, “Catcher”, “Rye”, “Sports”, and “Rye Bread”, which are different one from the other. The typical server addresses **AQ_{n1}...AQ_{nm} (54)** are different one from the other. The typical optional instructions **VJ_{n1}...VJ_{nk} (52)** have a 5 second “Timeout (seconds) per Search Engine”, rather than a 3 second “Timeout (seconds) per

20 Search Engine” as in FIGS. 11-13. The “Timeout (seconds) per Search Engine” instructs the client **C_n (16)** and/or the server **PS (18)** to return the typical user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)** within a period of less than the “Timeout (seconds) per Search Engine”

specified in the typical optional instructions **VJ_{n1}...VJ_{nk} (52)**. It should be noted that response times of less than one second per search engine are typical., and response times of substantially less than one second are quite common. However, the “Timeout (seconds) per Search Engine” has been incorporated herein for the user **U₁ (12)** to specify in the event of slow ones of the responses **R_{n1}...R_{nm} (32)** from certain ones of the servers **S₁...S_z (20)**.

FIG. 15 shows the typical completed service and/or information entry request forms **IF_n (230)**, at the user interface **I_n (14)**, having same and different ones of the typical queries **QQ_{n1}...QQ_{nm} (53)**, different ones of the typical server addresses **AQ_{n1}...AQ_{nm} (54)**, and the typical optional instructions **VJ_{n1}...VJ_{nk} (52)**. Typical same ones of the typical queries **QQ_{n1}...QQ_{nm} (53)** are “Charles Dickens”, “A Tale of Two Cities”, and “Oliver Twist”, which are different one from the other. All blank entries beneath the entry above take on the characteristics of the completed entry above. Therefore, Searches 2, 3, and 4 take on the typical queries **QQ_{n2}...QQ_{n4} (53)** of “Charles Dickens” of Search 1, above. Likewise, Searches 7, 8, and 9 take on the typical queries **QQ_{n7}...QQ_{n9} (53)** of “Oliver Twist” of Search 6, above. Search 5 takes on the typical query **QQ_{n5} (53)** of “A Tale of Two Cities”.

The typical optional instructions **VJ_{n1}...VJ_{nk} (52)** of FIG. 15 have “Separate”, which instructs the client **C_n (16)** and/or the server **PS (18)** to return the typical user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)** in separate groups, i.e., grouped by the typical server addresses

AQ_{n1}...AQ_{nm} (54), rather than interleaved one with the other, as instructed in FIGS. 11-14.

The typical optional instructions **VJ_{n1}...VJ_{nk} (52)** "Interleaved" of FIGS. 11-14 instructs the client **C_n (16)** and/or the server **PS (18)** to return the typical user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)** having information and/or services therein the responses **R_{n1}...R_{nm} (32)** to be interleaved one with the other (or alternating one with the other) therein the appropriate addressable query information groups **GI_{n1}...GI_{nz} (63)**. The labelled individual information groups **LL_{n11}...LL_{nzu} (86)** therein the addressable query information groups **GI_{n1}...GI_{nz} (63)** are alternatingly interleaved one with the other and labelled and/or identified and associated correspondingly therewith the responses **R_{n1}...R_{nm} (32)** therefrom the servers **S₁...S_z (20)**. The "Interleaved" information and/or services may typically be incorporated therein the appropriate addressable query information groups **GI_{n1}...GI_{nz} (63)** in substantially the same sequence as the information and/or services are therein the responses **R_{n1}...R_{nm} (32)** communicated therefrom the servers **S₁...S_z (20)**. However, other sorting/grouping criteria may optionally be used, as will be discussed later.

The typical server addresses **AQ_{n1}...AQ_{nm} (54)** are different one from the other in FIG. 15. The typical optional instructions **VJ_{n1}...VJ_{nk} (52)** also instruct the client **C_n (16)** and/or the server **PS (18)** to return the typical user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)** having 5

00000"0000000000

“Searches per Group”, rather than 3 “Searches per Group”, as in FIGS. 11-14. The
typical optional instructions $VJ_{n1}\dots VJ_{nk}$ (52) also instruct the client C_n (16) and/or the
server PS (18) to return the typical user response UR_n (37), as the typical service
and/or information response form IS_n (39) at the user interface I_n (14) having 8
5 “URL’s per Search Engine”.

FIG. 16 shows the typical completed service and/or information entry request form IF_n
(230), at the user interface I_n (14), having the same ones of the typical queries
 $QQ_{n1}\dots QQ_{nm}$ (53), different ones of the typical server addresses $AQ_{n1}\dots AQ_{nm}$ (54),
10 and the typical optional instructions $VJ_{n1}\dots VJ_{nk}$ (52). The typical optional
instructions $VJ_{n1}\dots VJ_{nk}$ (52) have “URL Details” as “List”, which instructs the client
 C_n (16) and/or the server PS (18) to return the typical user response UR_n (37), as the
typical service and/or information response form IS_n (39) at the user interface I_n (14)
“List” format rather than “Summary” format, as instructed in FIGS. 11-15. The “URL
15 Details” as “Summary” instruct the client C_n (16) and/or the server PS (18) to return
the typical user response UR_n (37) showing descriptions and/or other information
and/or services, in addition to links, therein the typical ones of the user responses UR_n
(37), as the typical service and/or information response forms IS_n (39) at the user
interface I_n (14), while “URL Details” as “List” instruct the client C_n (16) and/or the
20 server PS (18) to return the typical user response UR_n (37) showing only links therein
the typical ones of the user responses UR_n (37), as the typical service and/or
information response forms IS_n (39) at the user interface I_n (14).

00000 01437400

The typical optional instructions **VJ_{n1}...VJ_{nk} (52)** have 25 "URL's per Search Engine", which instructs the client **C_n (16)** and/or the server **PS (18)** to return the typical user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)** having 25 "URL's per Search Engine". The

5 typical optional instructions **VJ_{n1}...VJ_{nk} (52)** also instruct the client **C_n (16)** and/or the server **PS (18)** to return the typical user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)** having 9 "Searches per Group". The typical optional instructions **VJ_{n1}...VJ_{nk} (52)** also instruct the client **C_n (16)** and/or the server **PS (18)** to return the typical user response **UR_n**

10 **(37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)** at "Page" 3 of the "Current Group", rather than "Page" 1 of the "Current Group", as in FIGS. 11-15. The typical optional instructions **VJ_{n1}...VJ_{nk} (52)** also instruct the client **C_n (16)** and/or the server **PS (18)** to return the typical user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at

15 the user interface **I_n (14)** to use a 2 second "Timeout (seconds) per Search Engine".

FIG. 17 shows another one of the typical completed service and/or information entry request form **IF_n (230)**, at the user interface **I_n (14)**, having the same ones of the typical queries **QQ_{n1}...QQ_{nm} (53)**, different ones of the typical server addresses

20 **AQ_{n1}...AQ_{nm} (54)**, and the typical optional instructions **VJ_{n1}...VJ_{nk} (52)**. The typical optional instructions **VJ_{n1}...VJ_{nk} (52)** have 18 "URL's per Search Engine", which instructs the client **C_n (16)** and/or the server **PS (18)** to return the typical user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user

interface I_n (14) having 18 "URL's per Search Engine". The typical optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) also instruct the client C_n (16) and/or the server PS (18) to return the typical user response UR_n (37), as the typical service and/or information response form IS_n (39) at the user interface I_n (14) at "Group" 2, having 4 "Searches per Group", at "Page" 2 of the "Current Group", with a 2 second "Timeout (seconds) per Search Engine", and to return the results "Separately".

FIG. 18 shows another one of the typical completed service and/or information entry request form IF_n (230), at the user interface I_n (14), having different ones of the typical queries $QQ_{n1} \dots QQ_{nm}$ (53), different ones of the typical server addresses $AQ_{n1} \dots AQ_{nm}$ (54), and the typical optional instructions $VJ_{n1} \dots VJ_{nk}$ (52).

FIG. 19 shows another one of the typical completed service and/or information entry request form IF_n (230), at the user interface I_n (14), having different ones of the typical queries $QQ_{n1} \dots QQ_{nm}$ (53), as in FIG. 18, the same ones of the typical server addresses $AQ_{n1} \dots AQ_{nm}$ (54), and the typical optional instructions $VJ_{n1} \dots VJ_{nk}$ (52).

FIG. 20 shows the typical completed service and/or information entry request forms IF_n (230), at the user interface I_n (14) having a single typical one of the typical queries $QQ_{n1} \dots QQ_{nm}$ (53) as "sports".

FIG. 21 show another one of the typical completed service and/or information entry request forms IF_n (230), at the user interface I_n (14) having a single typical one of the typical queries $QQ_{n1}...QQ_{nm}$ (53) as "television".

5 FIG. 22 shows another one of the typical completed service and/or information entry request form IF_n (230), at the user interface I_n (14), having different ones of the typical queries $QQ_{n1}...QQ_{nm}$ (53), i.e., "sports" and "television", different ones of the typical server addresses $AQ_{n1}...AQ_{nm}$ (54), and the typical optional instructions $VJ_{n1}...VJ_{nk}$ (52).

10 FIG. 23 shows another one of the typical completed service and/or information entry request form IF_n (230), at the user interface I_n (14), having the same ones of the typical queries $QQ_{n1}...QQ_{nm}$ (53), i.e., "weather", different ones of the typical server addresses $AQ_{n1}...AQ_{nm}$ (54), and the typical optional instructions $VJ_{n1}...VJ_{nk}$ (52).

15 FIG. 24 shows another one of the typical completed service and/or information entry request form IF_n (230), at the user interface I_n (14), having different ones of the typical queries $QQ_{n1}...QQ_{nm}$ (53), i.e., "education", "universities," and "training", different ones of the typical server addresses $AQ_{n1}...AQ_{nm}$ (54), and the typical optional
20 instructions $VJ_{n1}...VJ_{nk}$ (52).

FIG. 25 shows another one of the typical completed service and/or information entry request form IF_n (230), at the user interface I_n (14), having different ones of the typical

DATE OF PRINTING

queries **QQ_{n1}...QQ_{nm}** (53), i.e., “weather”, “climate,” and “training”, different ones of
the typical server addresses **AQ_{n1}...AQ_{nm}** (54), and the typical optional instructions
VJ_{n1}...VJ_{nk} (52).

5 FIG. 26 shows another one of the typical completed service and/or information entry
request form **IF_n** (230), at the user interface **I_n** (14) having a single typical one of the
typical queries **QQ_{n1}...QQ_{nm}** (53) as “weather”.

The typical ones of the completed service and/or information entry request forms
10 **IF₁...IF_n** (230) at the user interfaces **I₁...I_n** (14) shown in FIG. 11-26 are typical
examples of the completed service and/or information entry request forms **IF₁...IF_n**
(230) at the user interfaces **I₁...I_n** (14), a much larger variety of which is possible.
Typical queries **QQ_{n1}...QQ_{nm}** (53), typical server addresses **AQ_{n1}...AQ_{nm}** (54), and
typical optional instructions **VJ_{n1}...VJ_{nk}** (52) therein the typical ones of the completed
15 service and/or information entry request forms **IF₁...IF_n** (230) at the user interfaces
I₁...I_n (14) shown in FIG. 11-26 are typical examples for illustrative purposes, and are
not intended to limit the substantially infinite variety of the queries **QQ_{n1}...QQ_{nm}** (53),
the server addresses **AQ_{n1}...AQ_{nm}** (54), and the optional instructions **VJ_{n1}...VJ_{nk}** (52)
that may be entered therein the service and/or information entry request forms
20 **IE₁...IE_n** (38), to derive the completed service and/or information entry request forms
IF₁...IF_n (230) at the user interfaces **I₁...I_n** (14). Likewise, names and/or links and/or
other information are incorporated therein the typical ones of the completed service
and/or information entry request forms **IF₁...IF_n** (230) shown in FIGS. 11-26 for

illustrative purposes, and are not intended to limit the large variety of the completed service and/or information entry request forms **IF₁...IF_n** (230) and the names and/or links and/or information that are possible, and that may be incorporated thereinto the completed service and/or information entry request forms **IF₁...IF_n** (230) at the user interfaces **I₁...I_n** (14).

Any ones of the typical queries **QQ_{n1}...QQ_{nm}** (53), any values within the ranges allowable for the typical server addresses **AQ_{n1}...AQ_{nm}** (54), and any values allowable for the typical optional instructions **VJ_{n1}...VJ_{nk}** (52) may be incorporated thereinto the typical ones of service and/or information entry request forms **IE₁...IE_n** (38) at the user interfaces **I₁...I_n** (14) of FIGS. 5A, 5B, and 6-10 , which the users **U₁...U_n** (12) enter to complete the typical ones of the completed service and/or information entry request forms **IF₁...IF_n** (230) at the user interfaces **I₁...I_n** (14) of FIGS. 11-26

Any values within the ranges allowable for "Search Engine Results"; "URL's per Search Engine"; "URL Details"; "Timeout (seconds) per Search Engine"; "Page"; "Searches per Group"; and "Group" may be incorporated thereinto the typical ones of service and/or information entry request forms **IE₁...IE_n** (38) at the user interfaces **I₁...I_n** (14) of FIGS. 5A, 5B, and 6-10 , which the users **U₁...U_n** (12) enter to complete the typical ones of the completed service and/or information entry request forms **IF₁...IF_n** (230) at the user interfaces **I₁...I_n** (14) of FIGS. 11-26.

The users $U_1 \dots U_n$ (12), for example, may enter: the typical queries $QQ_{n1} \dots QQ_{nm}$ (53); any values within the ranges allowable for the typical server addresses $AQ_{n1} \dots AQ_{nm}$ (54); and any values allowable for the typical optional instructions $VJ_{n1} \dots VJ_{nk}$ (52), such as, for example, any allowable "Search Engine Results";

5 "URL's per Search Engine"; "URL Details"; "Timeout (seconds) per Search Engine"; "Page"; "Searches per Group"; and "Group" thereinto the typical ones of service and/or information entry request forms $IE_1 \dots IE_n$ (38) at the user interfaces $I_1 \dots I_n$ (14) of FIGS. 5A, 5B, and 6-10, which the users $U_1 \dots U_n$ (12) enter to complete the typical ones of the completed service and/or information entry request forms $IF_1 \dots IF_n$ (230) at

10 the user interfaces $I_1 \dots I_n$ (14). The typical ones of the user responses $UR_1 \dots UR_n$ (37), as typical service and/or information response forms $IS_1 \dots IS_n$ (39) at the user interfaces $I_1 \dots I_n$ (14), may then be communicated thereto the corresponding ones of the users $U_1 \dots U_n$ (12), accordingly. FIGS. 27-52 show typical ones of the user responses

15 $UR_1 \dots UR_n$ (37), as the typical service and/or information response forms $IS_1 \dots IS_n$ (39) at the user interfaces $I_1 \dots I_n$ (14), which may be communicated thereto the corresponding ones of the users $U_1 \dots U_n$ (12). The scope of the client-server multitasking system 10 of the present invention, the client-server multitasking process

99, and the multitasking process 104, however, is not limited to such values. Use of such values herein is meant only for illustrative purposes, in teaching certain aspects of

20 the multitasking system 10 of the present invention, the client-server multitasking process 99, and the multitasking process 104 by example.

00000 000000

D. TYPICAL SERVICE AND/OR INFORMATION RESPONSE FORMS

FIGS. 27-52 show typical ones of the user responses **UR₁...UR_n (37)**, as typical service and/or information response forms **IS₁...IS_n (39)** at the user interfaces **I₁...I_n (14)**, which may be communicated thereto the corresponding ones of the users **U₁...U_n (12)**.

5 A typical particular one of the user responses **UR₁...UR_n (37)**, as a particular typical one of the service and/or information response forms **IS₁...IS_n (39)** at the particular one of the user interfaces **I₁...I_n (14)** may hereinafter be designated as the user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)**.

10

FIGS. 27-52 also show information therein each of the typical ones of the user responses **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**, pertaining to the "Current Group", the "Previous Group", if appropriate, the "Next Group", if appropriate, and each "Group" by alphanumeric.

15 FIGS. 27-52 also show information therein each of the typical ones of the user responses **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interfaces **I_n (14)**, pertaining to links to additional selections, and/or links to previous selections, if appropriate, and/or links to future selections, if appropriate, that may be made by pointing to and clicking on the selections to be made.

20

FIGS. 27-29 show typical ones of the user responses **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**, with reference to FIG. 11, having information and/or services therefrom the responses **R_{n1}...R_{nm} (32)**

incorporated therein, and incorporated thereinto Group I, Group II, and Group III, respectively.

The user **U_n (12)** may optionally select Group II, and/or Group III therefrom the typical one of the user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)** of FIG. 27, and/or Group I and/or Group III at the user interface **I_n (14)** of FIG. 28, and/or Group I, and/or Group II at the user interface **I_n (14)** of FIG. 29. The user **U_n (12)** may also select Group I, and/or Group II, and/or Group III by entering such into the typical one of the service and/or information entry request form **IE_n (38)** at the user interfaces **I₁...I_n (14)**, and completing the typical completed service and/or information entry request form **IF_n (230)**, at the user interface **I_n (14)** therewith the appropriate selections to be made.

The user **U_n (12)** may also make other selections by entering such into the typical one of the service and/or information entry request form **IE_n (38)** at the user interfaces **I₁...I_n (14)**, and completing the typical completed service and/or information entry request form **IF_n (230)**, at the user interface **I_n (14)** therewith the appropriate selections to be made, and/or by making such selections therethrough the typical ones of the user responses **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**. The user **U_n (12)** may typically make selections by pointing and clicking on the appropriate selections and/or by entering the desired information. Such information may be entered by any suitable means, including but not limited to mouse, keyboard entry, audible entry, and/or other suitable means.

FIGS. 27-29 show typical ones of the user responses UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14), having the service and/or information group G_n (35) having the addressable query information groups $GI_{n1}...GI_{nz}$ (63) therein, the labelled individual information groups $LL_{n11}...LL_{nzu}$ (86) therein the addressable query information groups $GI_{n1}...GI_{nz}$ (63), the additional request links $SL_{n1}...SL_{nw}$ (71), the optional service and/or information entry request form IE_n (38), and other information and/or services therein, resulting from the same and different ones of the typical queries $QQ_{n1}...QQ_{nm}$ (53), different ones of the typical server addresses $AQ_{n1}...AQ_{nm}$ (54), and the typical optional instructions $VJ_{n1}...VJ_{nk}$ (52).

FIGS. 27-29 show typical ones of the user responses UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14), resulting from the typical ones of the queries $QQ_{n1}...QQ_{nm}$ (53), "Cat", "Mouse", and "Dog", the same ones of the typical queries $QQ_{n1}...QQ_{n3}$ (53) and QQ_{n9} (53) being "Cat", other same ones of the typical queries QQ_{n4} (53) and QQ_{n7} (53) being "Mouse", but different from "Cat", and other same ones of the typical queries QQ_{n5} , QQ_{n6} (53), and QQ_{n8} (53) being "Dog", but different from "Cat" and/or "Mouse", the typical ones of the queries $QQ_{n1}...QQ_{nm}$ (53), "Cat", "Dog", and "Mouse", being different one from the other.

00000 01207 500

The typical same ones of the typical queries $QQ_{n1} \dots QQ_{n3}$ (53) as "Cat" are incorporated therein to the addressable query information groups GI_{n1} (63) of Group I.

5 The typical one of the queries QQ_{n4} (53) as "Mouse" is incorporated therein to the addressable query information groups GI_{n1} (63) of Group II. The other same ones of the typical queries QQ_{n5} and QQ_{n6} (53) as "Dog" are incorporated therein to the addressable query information groups GI_{n2} (63) of Group II.

10 The typical one of the queries QQ_{n7} (53) as "Mouse" is incorporated therein to the addressable query information groups GI_{n1} (63) of Group III. The typical one of the queries QQ_{n8} (53) as "Dog" is incorporated therein to the addressable query information groups GI_{n2} (63) of Group III. The typical one of the queries QQ_{n9} (53) as "Cat" is incorporated therein to the addressable query information groups GI_{n3} (63) of Group III.

15 FIGS. 27-29 show typical ones of the user responses UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14), with reference to FIG. 11 having: "Search Engine Results" as "Interleave"; "URL's per Search Engine" as "10"; "URL Details" as "Summary"; "Timeout (seconds) per Search Engine" as "3"; "Page" as "1"; "Searches per Group" as "3"; and "Group" as I, II, and 20 III, respectively, for FIGS. 27-29.

000000 000000

The typical optional instructions **VJ_{n1}...VJ_{nk} (52)** "URL's per Search Engine" as "10" instructs the client **C_n (16)** and/or the server **PS (18)** to return the typical user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)** having substantially "10" ones of the typical labelled individual information groups **LL_{n11}...LL_{nzu} (86)** per each one of the typical server addresses **AQ_{n1}...AQ_{nm} (54)** in the typical "Current Group", retrieved therefrom the responses **R_{n1}...R_{nm} (32)**. In this case, the typical labelled individual information groups **LL_{n11}...LL_{nzu} (86)** may be "Uniform Resource Locators", or "URL's" and/or other services and/or information associated therewith.

10

The typical optional instructions **VJ_{n1}...VJ_{nk} (52)** "Searches per Group" as "3" instructs the client **C_n (16)** and/or the server **PS (18)** to return the typical user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)** having "3 Searches per Group" for the group selected, which is designated in the typical optional instructions **VJ_{n1}...VJ_{nk} (52)** having "Group" as "1".

15

"Group I", which is the "Current Group: I", has the first three searches ("Searches per Group" designated as "3"), i.e., Search 1, Search 2, and Search 3, having the typical queries **QQ_{n1}...QQ_{n3} (53)** of "Cat", "Cat", and "Cat" and the typical server addresses **AQ_{n1}...AQ_{n3} (54)** of "WebCrawler", "Altavista", and "Lycos".

20

The "Next Group: II" and/or the "Group: III" may be selected therefrom the typical user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at

the user interface I_n (14). If the "Next Group: II" is selected, then Search 4, Search 5, and Search 6, having the typical queries $QQ_{n4}...QQ_{n6}$ (53) of "Mouse", "Dog", and "Dog" and the typical server addresses $AQ_{n4}...AQ_{n6}$ (54) of "Infoseek", "Excite", and "Yahoo" are selected and returned as the typical service and/or information response form IS_n (39) at the user interface I_n (14). If the "Group: III" is selected, then Search 7, Search 8, and Search 9, having the typical queries $QQ_{n7}...QQ_{n9}$ (53) of "Mouse", "Dog", and "Cat" and the typical server addresses $AQ_{n7}...AQ_{n9}$ (54) of "LookSmart", "HotBot", and "Dejanews" are selected and returned as the typical service and/or information response form IS_n (39) at the user interface I_n (14).

10

The typical optional instructions $VJ_{n1}...VJ_{nk}$ (52) having "URL's per Search Engine" as "10" and "Searches per Group" as "3", then returns substantially "10 URL's per Search Engine" multiplied by "3 Searches per Group", which is substantially "30 URL's per Group", and/or other services and/or information associated therewith, returned therein the "Current Group".

15

The actual number of the typical "URL's per Group" may vary from the number of the "URL's per Search Engine" multiplied by the number of the "Searches per Group", as duplicate ones of the "URL's" and/or other services and/or information associated therewith may typically be optionally discarded.

20

The typical optional instructions $VJ_{n1}...VJ_{nk}$ (52) "Page" as "1" instructs the client C_n (16) and/or the server PS (18) to return the typical user response UR_n (37), as the

US 2008/0144833 A1

addresses $AQ_{n1} \dots AQ_{nm}$ (54) in the typical “Current Group”, portions of which have been retrieved therefrom the responses $R_{n1} \dots R_{nm}$ (32), interleaved one with the other (or alternating one with the other) therein the appropriate addressable query information groups $GI_{n1} \dots GI_{nz}$ (63). The “Interleaved” information and/or services may typically be incorporated therein the appropriate addressable query information groups $GI_{n1} \dots GI_{nz}$ (63) therein the “Current Group” in substantially the same sequence as the information and/or services are therein the responses $R_{n1} \dots R_{nm}$ (32) communicated therefrom the servers $S_1 \dots S_z$ (20). However, other sorting/grouping criteria may optionally be used, as will be discussed later. In this case, the typical labelled individual information groups $LL_{n11} \dots LL_{nzu}$ (86) may be “Uniform Resource Locators”, or “URL’s” and/or other services and/or information associated therewith.

“Separate” may be selected therefrom the typical user response UR_n (37), as the typical service and/or information response form IS_n (39) at the user interface I_n (14), which instructs the client C_n (16) and/or the server PS (18) to return the typical user response UR_n (37), as the typical service and/or information response form IS_n (39) at the user interface I_n (14) in “Separate” groups, i.e., grouped by the typical server addresses $AQ_{n1} \dots AQ_{nm}$ (54) incorporated therein the appropriate addressable query information groups $GI_{n1} \dots GI_{nz}$ (63) therein the “Current Group”.

The typical optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) “URL Details” as “Summary” instruct the client C_n (16) and/or the server PS (18) to return the typical user response UR_n (37) showing the typical labelled individual information groups $LL_{n11} \dots LL_{nzu}$

(86) showing descriptions and/or other information and/or services, in addition to links, and/or URL's therein the typical ones of the user responses **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**.

5 "List" may be selected therefrom the typical user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)**, which instructs the client **C_n (16)** and/or the server **PS (18)** to return the typical user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)** typically showing only links to URL's and/or other links therein the
 10 typical ones of the user responses **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**.

The "Timeout (seconds) per Search Engine" instructs the client **C_n (16)** and/or the server **PS (18)** to return the typical user response **UR_n (37)**, as the typical service
 15 and/or information response form **IS_n (39)** at the user interface **I_n (14)** within a period of less than the "Timeout (seconds) per Search Engine" specified in the typical optional instructions **VJ_{n1}...VJ_{nk} (52)**. It should be noted that response times of less than one second per search engine are typical, and response times of substantially less than one second are quite common. However, the "Timeout (seconds) per Search Engine" has
 20 been incorporated herein for the user **U₁ (12)** to specify in the event of slow ones of the responses **R_{n1}...R_{nm} (32)** from certain ones of the servers **S₁...S_z (20)**.

If the time it takes to retrieve information from certain ones of the servers **S₁...S_z (20)** having the typical ones of the queries **QQ_{n1}...QQ_{nm} (53)** at the typical ones of the server addresses **AQ_{n1}...AQ_{nm} (54)** is greater than the "Timeout" selected, then the client **C_n (16)** and/or the server **PS (18)** typically incorporate a message and/or

5 messages, such as "No Results Found for 'Query 'x'' at 'Server Address 'y'' within "z" seconds!" for each of the non-responding certain ones of the servers **S₁...S_z (20)**, as shown later in FIG. 44. Information and/or services only from those ones of the servers **S₁...S_z (20)** responding within the "Timeout" period are then incorporated therein to the typical ones of the user responses **UR_n (37)**, as the typical service and/or

10 information response forms **IS_n (39)** at the user interface **I_n (14)**.

FIGS. 30-32 show typical ones of the user responses **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**, with reference to FIG. 12, having information and/or services therefrom the responses **R_{n1}...R_{nm} (32)**

15 incorporated therein, and incorporated therein to Group I, Group II, and Group III, respectively.

FIGS. 30-32 show typical ones of the user responses **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**, having the

20 service and/or information group **G_n (35)** having the addressable query information groups **GI_{n1}...GI_{nz} (63)** therein, the labelled individual information groups **LL_{n11}...LL_{nzu} (86)** therein the addressable query information groups **GI_{n1}...GI_{nz} (63)**, the additional request links **SL_{n1}...SL_{nw} (71)**, the optional service and/or information

2025 RELEASE UNDER E.O. 14176

entry request form **IE_n (38)**, and other information and/or services therein, resulting from the same and different ones of the typical queries **QQ_{n1}...QQ_{nm} (53)**, and the same and different ones of the typical server addresses **AQ_{n1}...AQ_{nm} (54)**, and the typical optional instructions **VJ_{n1}...VJ_{nk} (52)**, rather than results just from different

5 ones of the typical server addresses **AQ_{n1}...AQ_{nm} (54)** as in FIGS. 27-29.

FIGS. 30-32 show the typical ones of the user responses **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**, resulting from the typical ones of the queries **QQ_{n1}...QQ_{nm} (53)**, "Cat", "Dog", and

10 "Mouse", the same ones of the typical queries **QQ_{n1}, QQ_{n3} (53)**, and **QQ_{n9} (53)** being "Cat", other same ones of the typical queries **QQ_{n2} (53)**, **QQ_{n5} (53)**, **QQ_{n6} (53)**, and **QQ_{n8} (53)** being "Dog", but different from "Cat", and other same ones of the typical queries **QQ_{n4}** and **QQ_{n7} (53)** being "Mouse", but different from "Cat" and/or "Dog", the typical ones of the queries **QQ_{n1}...QQ_{nm} (53)**, "Cat", "Dog", and "Mouse", being

15 different one from the other.

FIGS. 30-32 also show the typical ones of the user responses **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**, resulting from the typical ones of the server addresses **AQ_{n1}...AQ_{nm} (54)**, "HotBot",

20 "WebCrawler", "Yahoo", "LookSmart", and "Dejanews", the same ones of the typical server addresses **AQ_{n1}** and **AQ_{n2} (54)** being "HotBot", other same ones of the typical server addresses **AQ_{n3}...AQ_{n5} (54)**, being "WebCrawler", but different from "HotBot", another one of the server addresses **AQ_{n6} (54)**, being "Yahoo", but different from

“HotBot” and/or “WebCrawler”, another one of the server addresses **AQ_{n7} (54)**, being
 “LookSmart”, but different from “HotBot” and/or “WebCrawler” and/or “Yahoo”, and
 other same ones of the typical server addresses **AQ_{n8} (54)** and **QQ_{n9} (54)** being
 “Dejanews”, but different from “HotBot” and/or “WebCrawler” and/or “Yahoo” and/or
 5 “LookSmart”, the typical ones of the server addresses **AQ_{n1}...AQ_{nm} (54)**, “HotBot”,
 “WebCrawler”, “Yahoo”, “LookSmart”, and “Dejanews”, being different one from the
 other.

The typical same ones of the typical queries **QQ_{n1}** and **QQ_{n3} (53)** as “Cat” are
 10 incorporated therein to the addressable query information groups **GI_{n1} (63)** of Group I.
 The typical one of the queries **QQ_{n2} (53)** as “Cat” is incorporated therein to the
 addressable query information groups **GI_{n2} (63)** of Group II.

The typical one of the queries **QQ_{n4} (53)** as “Mouse” is incorporated therein to the
 15 addressable query information groups **GI_{n1} (63)** of Group II. The other same ones of
 the typical queries **QQ_{n5}** and **QQ_{n6} (53)** as “Dog” are incorporated therein to the
 addressable query information groups **GI_{n2} (63)** of Group II.

The typical one of the queries **QQ_{n7} (53)** as “Mouse” is incorporated therein to the
 20 addressable query information groups **GI_{n1} (63)** of Group III. The typical one of the
 queries **QQ_{n8} (53)** as “Dog” is incorporated therein to the addressable query
 information groups **GI_{n2} (63)** of Group III. The typical one of the queries **QQ_{n9} (53)** as

“Cat” is incorporated therein the addressable query information groups GI_{n3} (63) of Group III.

FIGS. 30-32 show typical ones of the user responses UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14), with reference to FIG. 12 having: “Search Engine Results” as “Interleave”; “URL’s per Search Engine” as “5”; “URL Details” as “Summary”; “Timeout (seconds) per Search Engine” as “3”; “Page” as “1”; “Searches per Group as “5”; and “Group” as I, II, and III, respectively, for FIGS. 30-32.

10

Now again, FIGS. 30-32 show the typical ones of the user responses UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14), resulting from the same and different ones of the typical queries $QQ_{n1} \dots QQ_{nm}$ (53), the same and different ones of the typical server addresses $AQ_{n1} \dots AQ_{nm}$ (54), and the typical optional instructions $VJ_{n1} \dots VJ_{nk}$ (52), but which also result from the typical optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) having 5 “URL’s per Search Engine”, which instructs the client C_n (16) and/or the server PS (18) to return the typical user response UR_n (37), as the typical service and/or information response form IS_n (39) at the user interface I_n (14) having 5 “URL’s per Search Engine”, rather than 10 “URL’s per Search Engine”, as in FIGS. 27-29.

20

FIG. 33 show a typical one of the user response UR_n (37), as the typical service and/or information response form IS_n (39) at the user interface I_n (14), with reference to FIG. 13, having information and/or services therefrom the responses $R_{n1}...R_{nm}$ (32) incorporated therein, and incorporated thereinto Group I, having the typical ones of the queries $QQ_{n1}...QQ_{nm}$ (53) as "Big Elephants". The user U_n (12) may optionally select Group II, and/or Group III therefrom the typical one of the user response UR_n (37), as the typical service and/or information response form IS_n (39) at the user interface I_n (14) of FIG. 33.

FIG. 33 shows the typical one of the user response UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14), with reference to FIG. 13 having: "Search Engine Results" as "Interleave"; "URL's per Search Engine" as "10"; "URL Details" as "Summary"; "Timeout (seconds) per Search Engine" as "3"; "Page" as "1"; "Searches per Group" as "3"; and "Group" as I. Groups I and/or II may be selected therefrom the typical one of the user response UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14) of FIG. 33.

FIGS. 34-36 show typical ones of the user responses UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14), with reference to FIGS. 14A, 14B, and 14C, respectively, having information and/or services therefrom the responses $R_{n1}...R_{nm}$ (32) incorporated therein, and incorporated thereinto Group I, Group II, and Group III, respectively. FIGS. 34-36 show the results

“Interleaved”. Typical ones of links, prices, descriptions, savings, and shipping schedules are indicated for products in Group I. The prices may be compared, for example, one with the other for the same and/or different items, shipping schedules compared, and a decision can be made as to which items to order, as a result of the

5 information provided therein the typical one of the user responses **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**. Typical similar items may have the same and/or similar titles, such as for example in book titles, but publication dates, for example, and/or editions may be the same and/or different, and shipping schedules may be the same and/or different. Prices, and cost

10 savings may be traded off against shipping schedules, packaging (i.e., for example, hardcover and/or soft cover), author, publisher, for example, and/or other factors important to the user **U_n (12)**. The user **U_n (12)** may select the items and/or items to order therefrom such information that the user **U_n (12)** considers to be important. The user **U_n (12)** may place the order and/or orders directly therethrough the links and/or

15 URL's therein the typical ones of the user responses **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**. The user **U_n (12)** may additionally and/or alternatively collect the order and/or orders therein a shopping cart and/or shopping carts associated with the typical ones of the user responses **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)**

20 at the user interface **I_n (14)**, and place the order and/or orders therethrough the client **C_n (16)** and/or the server **PS (18)**.

00000: 00000000

Now again, FIGS. 34-36 show typical ones of the user responses UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14), having the service and/or information group G_n (35) having the addressable query information groups $GI_{n1} \dots GI_{nz}$ (63) therein, the labelled individual information groups $LL_{n11} \dots LL_{nzu}$ (86) therein the addressable query information groups $GI_{n1} \dots GI_{nz}$ (63), the additional request links $SL_{n1} \dots SL_{nw}$ (71), the optional service and/or information entry request form IE_n (38), and other information and/or services therein, resulting from the same and different ones of the typical queries $QQ_{n1} \dots QQ_{nm}$ (53), different ones of the typical server addresses $AQ_{n1} \dots AQ_{nm}$ (54), and the typical optional instructions $VJ_{n1} \dots VJ_{nk}$ (52). Typical same ones of the typical queries $QQ_{n1} \dots QQ_{nm}$ (53) are "Catcher in the Rye", "Catcher", "Rye", "Sports", and "Rye Bread", which are different one from the other. The typical server addresses $AQ_{n1} \dots AQ_{nm}$ (54) are different one from the other.

FIGS. 34-36 show typical ones of the user responses UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14), with reference to FIGS. 14A, 14B, and 14C having: "Search Engine Results" as "Interleave"; "URL's per Search Engine" as "10"; "URL Details" as "Summary"; "Timeout (seconds) per Search Engine" as "5"; "Page" as "1"; "Searches per Group" as "3"; and "Group" as I, II, and III, respectively, for FIGS. 34-36.

Now again, the typical optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) have a 5 second "Timeout (seconds) per Search Engine", rather than a 3 second "Timeout (seconds) per

Search Engine” as in FIGS. 27-33. The “Timeout (seconds) per Search Engine”
 instructs the client **C_n (16)** and/or the server **PS (18)** to return the typical user response
UR_n (37), as the typical service and/or information response form **IS_n (39)** at the user
 interface **I_n (14)** within a period of less than the “Timeout (seconds) per Search Engine”
 5 specified in the typical optional instructions **VJ_{n1}...VJ_{nk} (52)**. It should be noted that
 response times of less than one second per search engine are typical, and response times
 of substantially less than one second are quite common. However, the “Timeout
 (seconds) per Search Engine” has been incorporated herein for the user **U₁ (12)** to
 specify in the event of slow ones of the responses **R_{n1}...R_{nm} (32)** from certain ones of
 10 the servers **S₁...S_z (20)**.

FIGS. 37-39 show typical ones of the user responses **UR_n (37)**, as the typical service
 and/or information response forms **IS_n (39)** at the user interface **I_n (14)**, with reference
 to FIG. 15, having information and/or services therefrom the responses **R_{n1}...R_{nm} (32)**
 15 incorporated therein, and incorporated thereinto Group I, Group II, and Group III,
 respectively. Links, Prices, descriptions, savings, and shipping schedules are indicated
 for products in Group I, and Group II. FIG. 38 shows the results “Separately” for
 Group II, and FIG. 39 shows the results “Interleaved” for Group II. Links, Prices,
 descriptions, savings, and shipping schedules are indicated for products in Groups I and
 20 II in FIGS. 37-39.

FIGS. 37-39 show typical ones of the user responses **UR_n (37)**, as the typical service
 and/or information response forms **IS_n (39)** at the user interface **I_n (14)**, with reference

SECRET 01047500

to FIG. 15 having: "Search Engine Results" as "Separate"; "URL's per Search Engine" as "8"; "URL Details" as "Summary"; "Timeout (seconds) per Search Engine" as "1"; "Page" as "1"; "Searches per Group as "5"; and "Group" as I, II, and III, respectively for FIGS. 37-39.

5

Now again, the typical optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) have "Separate", which instructs the client C_n (16) and/or the server PS (18) to return the typical user response UR_n (37), as the typical service and/or information response form IS_n (39) at the user interface I_n (14) in separate groups, i.e., grouped by the typical server addresses

10 $AQ_{n1} \dots AQ_{nm}$ (54), rather than interleaved one with the other, as in FIGS. 27-36.

FIG. 40 show a typical one of the user response UR_n (37), as the typical service and/or information response form IS_n (39) at the user interface I_n (14), with reference to FIG. 16, having information and/or services therefrom the responses $R_{n1} \dots R_{nm}$ (32)

15 incorporated therein, and incorporated thereinto a single Group.

FIG. 40 shows the typical one of the user response UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14), with reference to FIG. 16 having: "Search Engine Results" as "Interleave"; "URL's per Search Engine" as "25"; "URL Details" as "List"; "Timeout (seconds) per Search Engine" as "2"; "Page" as "3"; "Searches per Group as "9"; and "Group" as I. Groups I and/or II may be selected therefrom the typical one of the user response UR_n (37), as the typical

20

service and/or information response forms **IS_n (39)** at the user interface **I_n (14)** of FIG. 40.

Now again, the “URL Details” as “Summary” instruct the client **C_n (16)** and/or the
5 server **PS (18)** to return the typical user response **UR_n (37)** showing descriptions
and/or other information and/or services, in addition to links, therein the typical ones of
the user responses **UR_n (37)**, as the typical service and/or information response forms
IS_n (39) at the user interface **I_n (14)**, as in FIGS. 27-39, while “URL Details” as “List”
instruct the client **C_n (16)** and/or the server **PS (18)** to return the typical user response
10 **UR_n (37)** showing only links and/or URL’s therein the typical ones of the user
responses **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)**
at the user interface **I_n (14)**, as in FIG. 40.

FIG. 41 show a typical one of the user response **UR_n (37)**, as the typical service and/or
15 information response form **IS_n (39)** at the user interface **I_n (14)**, with reference to FIG.
17, having information and/or services therefrom the responses **R_{n1}...R_{nm} (32)**
incorporated therein, and incorporated thereinto Group II.

FIG. 41 shows the typical one of the user response **UR_n (37)**, as the typical service
20 and/or information response forms **IS_n (39)** at the user interface **I_n (14)**, with reference
to FIG. 17 having: “Search Engine Results” as “Separate”; “URL’s per Search Engine”
as “18”; “URL Details” as “Summary”; “Timeout (seconds) per Search Engine” as “1”;
“Page” as “2”; “Searches per Group as “4”; and “Group” as “2”. Groups I and/or III

may be selected therefrom the typical one of the user response UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14) of FIG. 41.

5 FIG. 42 show a typical one of the user response UR_n (37), as the typical service and/or information response form IS_n (39) at the user interface I_n (14), with reference to FIG. 18, having information and/or services therefrom the responses $R_{n1} \dots R_{nm}$ (32) incorporated therein, and incorporated thereinto a single Group.

10 FIG. 42 shows the typical one of the user response UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14), with reference to FIG. 18 having: "Search Engine Results" as "Interleave"; "URL's per Search Engine" as "25"; "URL Details" as "Summary"; "Timeout (seconds) per Search Engine" as "5"; "Page" as "1"; "Searches per Group" as "9"; and "Group" as "1".

15 FIG. 43 show a typical one of the user response UR_n (37), as the typical service and/or information response form IS_n (39) at the user interface I_n (14), with reference to FIG. 19, having information and/or services therefrom the responses $R_{n1} \dots R_{nm}$ (32) incorporated therein, and incorporated thereinto a single Group.

20 FIG. 43 shows the typical one of the user response UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14), with reference to FIG. 19 having: "Search Engine Results" as "Interleave"; "URL's per Search

Engine” as “25”; “URL Details” as “Summary”; “Timeout (seconds) per Search Engine” as “3”; “Page” as “1”; “Searches per Group as “9”; and “Group” as “1”.

5 FIG. 44 show a typical one of the user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)**, with reference to FIG. 20, having information and/or services therefrom the responses **R_{n1}...R_{nm} (32)** incorporated therein, and incorporated thereinto Group I. FIG. 44 also shows the results of a “Timeout” occurring.

10

FIG. 44 shows the typical one of the user response **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**, with reference to FIG. 20 having: “Search Engine Results” as “Interleave”; “URL’s per Search Engine” as “10”; “URL Details” as “Summary”; “Timeout (seconds) per Search Engine” as “3”; “Page” as “1”; “Searches per Group as “3”; and “Group” as I. Groups I
15 and/or II may be selected therefrom the typical one of the user response **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)** of FIG. 44.

20 FIG. 45 show a typical one of the user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)**, with reference to FIG. 21, having information and/or services therefrom the responses **R_{n1}...R_{nm} (32)** incorporated therein, and incorporated thereinto Group I.

00000 010100

FIG. 45 shows the typical one of the user response **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**, with reference to FIG. 21 having: "Search Engine Results" as "Interleave"; "URL's per Search Engine" as "10"; "URL Details" as "Summary"; "Timeout (seconds) per Search Engine" as "3"; "Page" as "1"; "Searches per Group" as "3"; and "Group" as I. Groups I and/or II may be selected therefrom the typical one of the user response **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)** of FIG. 45.

10

FIG. 46 shows a typical one of the user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)**, with reference to FIG. 22, having information and/or services therefrom the responses **R_{n1...R_{nm}}** (32) incorporated therein, and incorporated thereinto Group I. FIG. 46 also shows the links/advertisements/images automatically inserted thereinto the typical one of the user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)**, which may be associated therewith the typical queries **QQ_{n1...QQ_{nm}}** (53). In the typical case shown in FIG. 46, links/advertisements/images associated therewith the typical queries **QQ_{n1...QQ_{nm}}** (53) of "sports" and "television" have been automatically inserted thereinto the typical one of the user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)**.

20

and 48, full text search results associated therewith the typical query $QQ_{n1} \dots QQ_{nm}$ (53) of "weather" have been automatically inserted thereinto the typical ones of the user responses UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14), in addition to the typical queries $QQ_{n1} \dots QQ_{nm}$ (53) at the
5 typical ones of the server addresses $AQ_{n1} \dots AQ_{nm}$ (54). The typical full text search results start and end with "Hotlist: Weather Science" in FIG. 47. The typical full text search results start with "Hotlist: Weather Science" and end with "search for: 'weather'" in FIG. 48.

10 FIGS. 47 and 48 show the typical one of the user response UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14), with reference to FIG. 23 having: "Search Engine Results" as "Interleave"; "URL's per Search Engine" as "10"; "URL Details" as "Summary"; "Timeout (seconds) per Search Engine" as "3"; "Page" as "1"; "Searches per Group" as "3"; and "Group" as "1". Next
15 Group: I and/or Group: III may be selected therefrom the typical one of the user response UR_n (37), as the typical service and/or information response forms IS_n (39) at the user interface I_n (14) of FIG. 47 and 48.

FIG. 49 shows a typical one of the user response UR_n (37), as the typical service and/or
20 information response form IS_n (39) at the user interface I_n (14), with reference to FIG. 24, having information and/or services therefrom the responses $R_{n1} \dots R_{nm}$ (32) incorporated therein, and incorporated thereinto Group I. FIG. 49 also shows the typical results of the server PS (18) and/or the client C_n (16) automatically optionally

spidering the sites obtained as a result of the typical queries $QQ_{n1} \dots QQ_{nm}$ (53) at the
 typical ones of the server addresses $AQ_{n1} \dots AQ_{nm}$ (54), and incorporating the spidered
 results thereinto the optional database 41 and/or the optional database 42. The
 spidered results incorporated thereinto the optional database 41 and/or the optional
 5 database 42 may be searched as in FIGS. 47 and 48 with reference to FIG. 23 and/or
 based upon other ones of the typical queries $QQ_{n1} \dots QQ_{nm}$ (53) at the typical ones of
 the server addresses $AQ_{n1} \dots AQ_{nm}$ (54), and the full text search results may be
 obtained therefrom the additional optional responses $RA_{n1} \dots RA_{nm}$ (40).

10 FIG. 49 also shows the typical one of the user response UR_n (37), as the typical service
 and/or information response forms IS_n (39) at the user interface I_n (14), with reference
 to FIG. 24 having: "Search Engine Results" as "Interleave"; "URL's per Search
 Engine" as "10"; "URL Details" as "Summary"; "Timeout (seconds) per Search
 Engine" as "3"; "Page" as "1"; "Searches per Group as "3"; and "Group" as "1". Next
 15 Group: I and/or Group: III may be selected therefrom the typical one of the user
 response UR_n (37), as the typical service and/or information response forms IS_n (39) at
 the user interface I_n (14) of FIG. 49.

FIGS. 50 shows a typical one of the user response UR_n (37), as the typical service
 20 and/or information response form IS_n (39) at the user interface I_n (14), with reference
 to FIG. 25, having information and/or services therefrom the responses $R_{n1} \dots R_{nm}$ (32)
 incorporated therein, and incorporated thereinto Group I. FIG. 50 also shows the
 typical results of the server PS (18) and/or the client C_n (16) semi-automatically

optionally spidering the sites obtained as a result of the typical queries **QQ_{n1}...QQ_{nm}**
(53) at the typical ones of the server addresses **AQ_{n1}...AQ_{nm}** **(54)**, and incorporating
 the spidered results thereinto the optional database **41** and/or the optional database **42**.
 The spidered results incorporated thereinto the optional database **41** and/or the optional
 5 database **42** may also be searched as in FIGS. 47 and 48 with reference to FIG. 23
 and/or based upon other ones of the typical queries **QQ_{n1}...QQ_{nm}** **(53)** at the typical
 ones of the server addresses **AQ_{n1}...AQ_{nm}** **(54)**, and the full text search results may be
 obtained therefrom the additional optional responses **RA_{n1}...RA_{nm}** **(40)**.

10 The user **U_n** **(12)** may optionally select those sites to be spidered and incorporated
 thereinto the optional database **41** and/or the optional database **42**, as in the typical one
 of the user response **UR_n** **(37)**, as the typical service and/or information response form
IS_n **(39)** at the user interface **I_n** **(14)** in FIG. 50. FIG. 51 shows the typical results of
 the server **PS** **(18)** and/or the client **C_n** **(16)** optionally spidering the sites obtained as a
 15 result of the typical queries **QQ_{n1}...QQ_{nm}** **(53)** at the typical ones of the server
 addresses **AQ_{n1}...AQ_{nm}** **(54)**, and input resulting therefrom user selection of sites to be
 spidered therefrom FIG. 50, and incorporating the spidered results thereinto the optional
 database **41** and/or the optional database **42**.

20 The results of the optional spidering typically obtained therefrom the typical process
 used therewith FIGS. 50 and 51 may be substantially the same as the typical process
 used therewith FIG. 49, if all the sites shown in FIG. 50 are selected for incorporation
 into the database **41** and/or the optional database **42**. The typical process of FIG. 49

offers an automatic approach to constructing the optional database **41** and/or the optional database **42**, and the typical process of FIGS. 50 and 51 offers the flexibility of weeding out and/or selecting sites to be incorporated thereinto the database **41** and/or the optional database **42**.

5

FIG. 50 also shows the typical one of the user response **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**, with reference to FIG. 25 having: "Search Engine Results" as "Interleave"; "URL's per Search Engine" as "10"; "URL Details" as "Summary"; "Timeout (seconds) per Search Engine" as "3"; "Page" as "1"; "Searches per Group" as "3"; and "Group" as "1". Next Group: I and/or Group: III may be selected therefrom the typical one of the user response **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)** of FIG. 50.

15 FIG. 52 shows a typical one of the user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)**, with reference to FIG. 26, having information and/or services therefrom the additional optional responses **RA_{n1}...RA_{nm} (40)**. FIG. 52 shows the results solely of a full text search of the optional database **41** and/or the optional database **42**, which may be associated therewith the
20 typical queries **QQ_{n1}...QQ_{nm} (53)**. The full text search results are incorporated therefrom the additional optional responses **RA_{n1}...RA_{nm} (40)**. The typical full text search results start with "Hotlist: Weather Science" and end with "High Plains Climate Center Home Page" in FIG. 52.

SECRET - CONFIDENTIAL

The typical ones of the user responses **UR₁...UR_n (37)**, as typical service and/or information response forms **IS₁...IS_n (39)** at the user interfaces **I₁...I_n (14)** shown in FIG. 27-52 are typical examples of the user responses **UR₁...UR_n (37)**, as typical service and/or information response forms **IS₁...IS_n (39)** at the user interfaces **I₁...I_n (14)**, a much larger variety of which is possible. FIGS. 27-52 illustrate typical examples of typical ones of the user responses **UR₁...UR_n (37)**, as typical service and/or information response forms **IS₁...IS_n (39)** at the user interfaces **I₁...I_n (14)** to the typical queries **QQ_{n1}...QQ_{nm} (53)**, the typical ones of the server addresses **AQ_{n1}...AQ_{nm} (54)**, and the typical optional instructions **VJ_{n1}...VJ_{nk} (52)** having been entered therein the typical ones of the completed service and/or information entry request forms **IF₁...IF_n (230)** at the user interfaces **I₁...I_n (14)** shown in FIG. 11-26.

The typical examples of the typical ones of the user responses **UR₁...UR_n (37)**, as typical service and/or information response forms **IS₁...IS_n (39)** at the user interfaces **I₁...I_n (14)** are for illustrative purposes, and are not intended to limit the substantially infinite variety of the user responses **UR₁...UR_n (37)**, as the service and/or information response forms **IS₁...IS_n (39)** at the user interfaces **I₁...I_n (14)**, the queries **QQ_{n1}...QQ_{nm} (53)**, the server addresses **AQ_{n1}...AQ_{nm} (54)**, and the optional instructions **VJ_{n1}...VJ_{nk} (52)** that may be entered thereinto the service and/or information entry request forms **IE₁...IE_n (38)**, to derive the to the completed service and/or information entry request forms **IF₁...IF_n (230)**, and which result in the user responses **UR₁...UR_n (37)**, as the service and/or information response forms **IS₁...IS_n**

00000000000000000000

(39) at the user interfaces $I_1 \dots I_n$ (14). Likewise, names and/or links and/or other information are incorporated therein the typical ones of the user responses $UR_1 \dots UR_n$ (37), as the service and/or information response forms $IS_1 \dots IS_n$ (39) at the user interfaces $I_1 \dots I_n$ (14), shown in FIGS. 27-52 for illustrative purposes, and are not intended to limit the large variety of the user responses $UR_1 \dots UR_n$ (37), as the service and/or information response forms $IS_1 \dots IS_n$ (39) at the user interfaces $I_1 \dots I_n$ (14), and the names and/or links and/or information that are possible, and that may be incorporated thereinto the user responses $UR_1 \dots UR_n$ (37), as the service and/or information response forms $IS_1 \dots IS_n$ (39) at the user interfaces $I_1 \dots I_n$ (14).

10

A  F. OPTIONAL DATABASE
~~E. OPTIONAL DATABASE~~

The server PS (18) and/or the clients $C_1 \dots C_n$ (16) may also incorporate corresponding additional optional responses $RA_{11} \dots RA_{nm}$ (40) into the service and/or information responses $IR_1 \dots IR_n$ (34), which may be obtained by accessing optional databases 41 and/or 42, shown in FIGS. 53A and 53B, which may be optionally resident within the server PS (18) and/or the clients $C_1 \dots C_n$ (16), respectively.

The server PS (18) and/or the clients $C_1 \dots C_n$ (16) may optionally store the responses $R_{11} \dots R_{nm}$ (32) communicated therefrom the servers $S_1 \dots S_z$ (20), in accordance with the designation scheme corresponding to the server designations $S_{11} \dots S_{nm}$ (30) in the optional databases 41 and/or 42, optionally resident within the server PS (18) and/or the clients $C_1 \dots C_n$ (16), respectively, which may be optionally retrieved from the

Database and Tables

optional databases **41** and/or **42**, and/or optionally incorporated into the service and/or information responses **IR₁...IR_n** (**34**), and accessed as the additional optional responses **RA₁₁...RA_{nm}** (**40**).

5 The server **PS** (**18**) and/or the clients **C₁...C_n** (**16**) may optionally communicate with the optional servers **SO₁...SO_p** (**22**), and obtain information from each of the optional servers **SO₁...SO_p** (**22**), which may also be stored in the optional databases **41** and/or **42**, which may be optionally resident within the server **PS** (**18**) and/or the clients **C₁...C_n** (**16**), respectively, and which may be optionally incorporated into the service
10 and/or information responses **IR₁...IR_n** (**34**), and accessed as the additional optional responses **RA₁₁...RA_{nm}** (**40**).

Each of the users **U₁...U_n** (**12**) may optionally communicate corresponding additional optional requests **q₁₁...q_{np}** (**44**) therethrough the corresponding user interfaces **I₁...I_n** (**14**) and the corresponding clients **C₁...C_n** (**16**) to the optional servers **SO₁...SO_p** (**22**), based upon information in the service and/or information responses **IR₁...IR_n** (**34**) and/or other information presented to and/or available and/or known to the users **U₁...U_n** (**12**) therethrough the corresponding user interfaces **I₁...I_n** (**14**). The optional servers **SO₁...SO_p** (**22**) reply to the clients **C₁...C_n** (**16**) with corresponding responses
20 **r₁₁...r_{np}** (**46**), which the clients **C₁...C_n** (**16**) communicate therethrough the corresponding user interfaces **I₁...I_n** (**14**) to the corresponding users **U₁...U_n** (**12**), as shown in FIG. 2 for typical ones of the requests **q₁₁...q_{np}** (**44**) and the corresponding responses **r₁₁...r_{np}** (**46**).

SECRET OF 20250

A ~~F. ADDITIONAL DETAILS~~
G. ADDITIONAL DETAILS

Now, in more detail, the clients $C_1 \dots C_n$ (16) and the servers $S_1 \dots S_z$ (20) reside on the network 24. The users $U_1 \dots U_n$ (12) and the corresponding clients $C_1 \dots C_n$ (16) communicate one with the other therethrough the corresponding user interfaces $I_1 \dots I_n$ (14). The user U_1 (12), thus, communicates with the client C_1 (16), one with the other, therethrough the user interface I_1 (14); the user U_2 (12), thus, communicates with the client C_2 (16), one with the other, therethrough the user interface I_2 (14); the user U_n (12), thus, communicates with the client C_n (16), one with the other, therethrough the user interface I_n (14); and so on. Any particular user, designated user U_n (12), thus, communicates with corresponding client C_n (16), one with the other, through corresponding user interface I_n (14), as best shown later in FIGS. 54-56. The user U_n (12) may be used to designate any one of the users $U_1 \dots U_n$ (12); the user interface I_n (14) may be used to designate any one of the user interfaces $I_1 \dots I_n$ (14); the client C_n (16) may be used to designate any one of the users clients $C_1 \dots C_n$ (16); and so on. The client-server multitasking system 10 may also have the server PS (18) and the optional servers $SO_1 \dots SO_p$ (22) residing on the network 24.

There may be n different or same the service and/or information requests $IQ_1 \dots IQ_n$ (28) present on the network 24 at any time. Each of the service and/or information requests $IQ_1 \dots IQ_n$ (28) may have one or more of the same and/or different requests $Q_{11} \dots Q_{nm}$ (29) to be made of one or more of the same and/or different ones of the

servers $S_1 \dots S_z$ (20), which are called server designations $S_{11} \dots S_{nm}$ (30), in accordance with the designation scheme which designates the servers $S_1 \dots S_z$ (20) to be communicated with corresponding to the requests $Q_{11} \dots Q_{nm}$ (29) as the corresponding server designations $S_{11} \dots S_{nm}$ (30). The service and/or information request IQ_n (28)

5 may be used to designate any particular one of the service and/or information requests $IQ_1 \dots IQ_n$ (28). Requests $Q_{n1} \dots Q_{nm}$ (29) may be used to designate the particular requests $Q_{11} \dots Q_{nm}$ (29) associated therewith and corresponding to the service and/or information request IQ_n (28).

10 Each of the requests $Q_{11} \dots Q_{1m}$ from the client C_1 (16) may each be different one from the other or the same; each of the requests $Q_{21} \dots Q_{2m}$ from the client C_2 (16) may each be different one from the other or the same; and each of the requests $Q_{n1} \dots Q_{nm}$ (29) from the client C_n (16) may each be different one from the other or the same, and so on. The requests $Q_{11} \dots Q_{1m}$ (29), the requests $Q_{21} \dots Q_{2m}$ (29), and the requests

15 $Q_{n1} \dots Q_{nm}$ (29), thus, may each be different one from the other, or the same, and so on. The requests $Q_{11} \dots Q_{nm}$ (29) from the clients $C_1 \dots C_n$ (14), thus, may each be different, one from the other, or the same, and may be made of the same and/or different ones of the servers $S_1 \dots S_z$ (20) at the same time and/or different times, in accordance with the corresponding server designations $S_{11} \dots S_{nm}$ (30). There may be m different

20 or same ones of the requests $Q_{n1} \dots Q_{nm}$ (29) from the client C_n (16) at any time, and n x m different and/or same ones of the requests $Q_{11} \dots Q_{nm}$ (29) of the same and/or different ones of the servers $S_1 \dots S_z$ (20) present on the network 24 at any time.

SECRET//NOFORN

This designation format, in which the first alphanumeric subscript after the parameter of interest, for example, as in the parameters $Q_{n1} \dots Q_{nm}$ representing the requests $Q_{n1} \dots Q_{nm}$ (29), represents the particular parameters corresponding to the user U_n (12), and the second alphanumeric subscript after the parameter of interest represents the 1st, 2nd, 3rd, through the mth one of the particular parameters, will be used as a designation scheme throughout. In this particular instance, for example, there are then m distinctly the same and/or different ones of the requests $Q_{n1} \dots Q_{nm}$ (29) associated with the nth user U_n , which is designated as the user U_n (12). There are then the same and/or different m distinctly the same and/or different server designations $S_{n1} \dots S_{nm}$ (30) associated with the nth user U_n , which is designated as the user U_n (12). The same and/or different requests $Q_{n1} \dots Q_{nm}$ (29), then, may be made of the same and/or different ones of the servers $S_1 \dots S_z$ (20), in accordance with the designation scheme corresponding to the corresponding certain ones of the server designations $S_{n1} \dots S_{nm}$ (30), associated with and corresponding to the user U_n (12).

Each of the clients $C_1 \dots C_n$ (16) may optionally also function as servers. Certain ones of the clients $C_1 \dots C_n$ (16) may, therefore, function only as clients, while alternate ones of the clients $C_1 \dots C_n$ (16) may function as clients and as servers. Each of the user interfaces $I_1 \dots I_n$ (14) may be integral with the clients $C_1 \dots C_n$ (16) or separate from the clients $C_1 \dots C_n$ (16). Therefore, certain ones of the user interfaces $I_1 \dots I_n$ (14) may be integral with the clients $C_1 \dots C_n$ (16), while yet other ones of the user interfaces $I_1 \dots I_n$ (14) may be separate from the clients $C_1 \dots C_n$ (16).

0000-01-01-0000

The client-server multitasking system **10** of the present invention, the client-server multitasking process **99**, and the multitasking process **104**, the server **PS (18)** and/or the clients **C₁...C_n (16)** are capable of retrieving, parsing, processing, formatting, organizing, grouping, sorting, and consolidating services and/or information therefrom

5 the same and/or different ones of the servers **S₁...S_z (20)**, and/or the optional servers **SO₁...SO_p (22)**, and/or the clients **C₁...C_n (16)**, having the same and/or different structures, formats, organizations, groupings, and/or data structures, and incorporating the parsed, processed, formatted, organized, grouped, sorted, and consolidated services and/or information thereinto the user responses **UR₁...UR_n (37)** for delivery to the user

10 interfaces **I₁...I_n (14)** and use by the users **U₁...U_n (12)**.

Now, the user interfaces **I₁...I_n (14)** may each be different, one from the other, or the same, and may change characteristics over time. Each of the user interfaces **I₁...I_n (14)** may change characteristics as a function of time, information, and/or instructions,

15 and/or other means, which may be derived by the users **U₁...U_n (12)** and/or the clients **C₁...C_n (16)** and/or the servers **S₁...S_z (20)**, and/or the server **PS (18)**, and/or the optional servers **SO₁...SO_p (22)**, and/or derived within the user interfaces **I₁...I_n (14)**. The user interface **I₁...I_n (14)** may change state.

20 The user interface **I₁...I_n (14)** may also change as a function of optional timers and/or timed instructions associated therewith the user interfaces **I₁...I_n (14)**, and/or associated therewith the clients **C₁...C_n (16)** and/or associated therewith the servers **S₁...S_z (20)**, and/or associated therewith the server **PS (18)**, and/or associated therewith the optional

servers $SO_1 \dots SO_p$ (22), and/or instructions from the user $U_1 \dots U_n$ (12). Changes in the user interface I_n (14) may appear continuous to the user U_n (12), spaced in time, staccato, or static depending upon the optional timers and/or the timed instructions. Other conditions may change the user interface $I_1 \dots I_n$ (14), as well.

5

The user interfaces $I_1 \dots I_n$ (14) may be updated continuously, intermittently, manually, randomly, semi-automatically, automatically, repetitively, non-repetitively, singly, plurally, multiplexed, and/or a combination thereof or other suitable manner.

10 The user interfaces $I_1 \dots I_n$ (14) may be visual, such as graphical user interfaces, aural, and/or tactile, a combination thereof, and/or other suitable means. The user interfaces $I_1 \dots I_n$ (14) may be integral with the clients $C_1 \dots C_n$ (16) or separate.

15 **II. A PARTICULAR USER, USER INTERFACE, AND CLIENT ON THE NETWORK**

A. OVERVIEW

FIGS. 54-56 show typical particular ones of the users U_n (12), the corresponding ones of the user interfaces U_n (12), the corresponding ones of the clients C_n (16), the server **PS** (18), the servers $S_1 \dots S_z$ (20) designated by the server designations $S_{n1} \dots S_{nm}$ (30) corresponding to the requests $Q_{n1} \dots Q_{nm}$ (29) associated with the corresponding ones of the users U_n (12), and the optional servers $SO_1 \dots SO_p$ (22) of the client-server multitasking system **10** of the present invention, which reside on the network **24**. The

user U_n (12) communicates with the corresponding client C_n (16) therethrough the corresponding user interface I_n (14).

The user U_n (12) enters the corresponding user input UI_n (25) having one or more same and/or different user requests $qu_{n1}...qu_{nu}$ (26) thereinto the user interface I_n (14). The user requests $qu_{n1}...qu_{nu}$ (26) are communicated from the user interface I_n (14) to the client C_n (16) within the user service and/or information request iq_n (27), having the user requests $qu_{n1}...qu_{nu}$ (26) and other optional information.

10 The user interface I_n (14) communicates the user service and/or information request iq_n (27) therethrough to the client C_n (16), which optionally formats the corresponding user service and/or information request iq_n (27) into the corresponding service and/or information request IQ_n (28), as required. The service and/or information request IQ_n (28) may have one or more the same and/or different requests $Q_{n1}...Q_{nm}$ (29) to be
15 made of the servers $S_1...S_z$ (20) designated by the server designations $S_{n1}...S_{nm}$ (30) at the same time.

The client C_n (16) may communicate the corresponding service and/or information request IQ_n (28) to the server PS (18). The server PS (18) parses, processes and/or
20 formats the service and/or information request IQ_n (28) received from the client C_n (16) into the certain requests $Q_{n1}...Q_{nm}$ (29), and communicates the certain requests $Q_{n1}...Q_{nm}$ (29) to the corresponding certain ones of the servers $S_1...S_z$ (20)

designated by the server designations $S_{n1}...S_{nm}$ (30), as shown for typical ones of the certain requests $Q_{n1}...Q_{nm}$ (29) in FIG. 54.

The client C_n (16) may alternatively parse, process and/or format the user service and/or information request iq_n (27) into the alternate requests $Q_{n1}...Q_{nm}$ (29), and communicate the alternate requests $Q_{n1}...Q_{nm}$ (29) to the corresponding alternate ones of the servers $S_1...S_z$ (20) designated by the server designations $S_{n1}...S_{nm}$ (30), as shown for typical alternate ones of the requests $Q_{n1}...Q_{nm}$ (29) in FIG. 55.

10 The client C_n (16) may alternatively communicate the corresponding other alternate one of the service and/or information request IQ_n (28) to the server PS (18), which parses, processes and/or formats the other alternate one of the service and/or information request IQ_n (28) into the other alternate ones of the requests $Q_{n1}...Q_{nm}$ (29), and communicates the other alternate ones of the requests $Q_{n1}...Q_{nm}$ (29) to the corresponding other alternate ones of the servers $S_{11}...S_{nm}$ (30), and additionally the client C_n (16) may also parse, process and/or format the user service and/or information request iq_n (27) into yet other alternate ones of the requests $Q_{n1}...Q_{nm}$ (29), and communicate the yet other alternate ones of the requests $Q_{n1}...Q_{nm}$ (29) to the corresponding yet other alternate ones of the servers $S_{n1}...S_{nm}$ (30), as shown for
15 typical other alternate ones of the requests $Q_{n1}...Q_{nm}$ (29) and typical yet other alternate ones of the requests $Q_{n1}...Q_{nm}$ (29) in FIG. 56.

FIG. 59

Each of the servers $S_1 \dots S_z$ (20) designated by the server designations $S_{n1} \dots S_{nm}$ (30) replies to the server PS (18) and/or the client C_n (16), in accordance with the designation scheme corresponding to the corresponding certain ones of the server designations $S_{11} \dots S_{nm}$ (30), accordingly, and communicates the corresponding responses $R_{n1} \dots R_{nm}$ (32), associated with the requests $Q_{n1} \dots Q_{nm}$ (29), to the server PS (18) and/or the client C_n (16), accordingly. The server PS (18) and/or the client C_n (16) parse, format, process, group, and organize the responses $R_{n1} \dots R_{nm}$ (32) into the corresponding service and/or information response IR_n (34) and/or the user service and/or information response ir_n (36) having the corresponding parsed, processed, formatted, grouped, and organized service and/or information group G_n (35) acceptable to the client C_n (16) and the user interface I_n (14). The server PS (18) communicates the service and/or information response IR_n (34) to the client C_n (16), as required.

The client C_n (16) formats the service and/or information responses $IR_1 \dots IR_n$ (34) into the corresponding user service and/or information response ir_n (36), as required, and communicates the user service and/or information responses ir_n (36) thereto the user interfaces I_n (14). The user interface I_n (14) incorporates the user service and/or information response ir_n (36) into the user response UR_n (37), which is communicated by the user interfaces I_n (14) thereto the user U_n (12).

The server PS (18) and/or the client C_n (16) may optionally also incorporate the optional additional corresponding responses $RA_{n1} \dots RA_{nm}$ (40) (shown later in FIGS. 59, 60, 63, and 64) into the service and/or information response IR_n (34), which may

be obtained by accessing the optional databases **41** and/or **42**, which may be optionally resident within the server **PS (18)** and/or the client **C_n (16)**, respectively

The server **PS (18)** and/or the client **C_n (16)** communicate the service and/or information response **IR_n (34)** therethrough the user interface **I_n (14)** to the user **U_n (12)**.

The server **PS (18)** and/or the clients **C_n (16)** may optionally store the responses **R_{n1...R_{nm} (32)}** communicated from the servers **S_{1...S_z (20)}** designated by the server designations **S_{n1...S_{nm} (30)}** in the optional databases **41** and/or **42**, optionally resident within the server **PS (18)** and/or the client **C_n (16)**, respectively, which may be optionally retrieved from the optional databases **41** and/or **42**, and/or optionally incorporated into the service and/or information response **IR_n (34)**, and accessed as the additional optional responses **RA_{n1...RA_{nm} (40)}**.

The server **PS (18)** and/or the client **C_n (16)** may optionally communicate with the optional servers **SO_{1...SO_p (22)}**, and obtain information from each of the optional servers **SO_{1...SO_p (22)}**, which may also be stored in the optional databases **41** and/or **42**, which may be optionally resident within the server **PS (18)** and/or the client **C_n (16)**, respectively, and which may be optionally incorporated into the service and/or information response **IR_n (34)**, and accessed as the additional optional responses **RA_{n1...RA_{nm} (40)}**.

Patent 2019/030373

The user U_n (12) may optionally communicate the corresponding additional optional requests $q_{n1} \dots q_{np}$ (44) therethrough the user interface I_n (14) and the client C_n (16) to the optional servers $SO_1 \dots SO_p$ (22), based upon information in the service and/or information response IR_n (34) and/or other information presented to and/or available and/or known to the user U_n (12) therethrough the user interface I_n (14). The optional servers $SO_1 \dots SO_p$ (22) reply to the client C_n (16) with the corresponding responses $r_{n1} \dots r_{np}$ (46), which the client C_n (16) communicates therethrough the user interface I_n (14) to the user U_n (12), as shown in FIGS. 54-56 for typical ones of the requests $q_{n1} \dots q_{np}$ (44) and the corresponding responses $r_{n1} \dots r_{np}$ (46).

10

B. DIAGRAMMATIC REGROUPING

Now, in more detail, FIG. 57 shows a schematic representation of ones of the users $U_1 \dots U_n$ (12), the corresponding user interfaces $I_1 \dots I_n$ (14), the corresponding clients $C_1 \dots C_n$ (16), the server PS (18), the servers $S_1 \dots S_z$ (20), and the optional servers $SO_1 \dots SO_p$ (22) of the client-server multitasking system 10 of the present invention, constructed in accordance with the present invention, which reside on the network 24, regrouped diagrammatically and alternatively named for illustrative purposes only, to illustrate and visualize possible typical communication paths. Other than FIG. 57, the nomenclature previously described and utilized will be used throughout.

20

Now, as shown in FIG. 57, for illustrative purposes only, ones of the clients $C_1 \dots C_n$ (16) communicating with the server PS (18), as in FIG. 54, may optionally be

20250420 14:04:50

designated clients **CA₁...CA_w (16A)**, and so on. Ones of the clients **C₁...C_n (16)** communicating with the servers **S₁...S_z (20)**, as in FIG. 55, may optionally be designated clients **CB₁...CB_x (16B)**, and so on. Ones of the clients **C₁...C_n (16)** communicating with the server **PS (18)** and with the servers **S₁...S_z (20)**, as in FIG
5 56, may optionally be designated clients **CC₁...CC_y (16C)**, and so on.

The users **U₁...U_n (12)** and the corresponding user interfaces **I₁...I_n (14)** corresponding to the clients **C₁...C_n (16)** may, likewise, optionally be designated in FIG. 57 only: correspondingly to the clients **CA₁...CA_w (16A)**, as users **UA₁...UA_w (12A)** and user
10 interfaces **IA₁...IA_w (14A)**, respectively; correspondingly to the clients **CB₁...CB_x (16B)**, as users **UB₁...UB_x (12B)** and user interfaces **IB₁...IB_x (14B)**, respectively; and correspondingly to the clients **CC₁...CC_y (16C)**, as users **UC₁...UC_y (12C)** and
IC₁...IC_y (14C), respectively.

15 The clients **C₁...C_n (16)** being accounted for, the total of the clients **CA₁...CA_w (16A)**, **CB₁...CB_x (16B)**, and **CC₁...CC_y (16C)** of FIG. 57 add up to n, where n may be any number greater or equal to one, such that the subscripts $w + x + y = n$.

**III. A PARTICULAR SERVICE AND/OR INFORMATION REQUEST AND ASSOCIATED
SERVICE AND/OR INFORMATION RESPONSE ON THE NETWORK**

B. THE SERVER PS (18)

FIG. 58 shows a typical particular one of the service and/or information requests

5 **IQ₁...IQ_n (28)**, designated as the service and/or information request **IQ_n (28)**, having
queries **QQ_{n1}...QQ_{nm} (53)**, corresponding server addresses **AQ_{n1}...AQ_{nm} (54)**, and
optional instructions **VJ_{n1}...VJ_{nk} (52)**. The server addresses **AQ_{n1}...AQ_{nm} (54)** and
the optional instructions **VJ_{n1}...VJ_{nk} (52)** may be optional, and may depend upon the
user interface **I_n (14)**, and/or other information resident within the server **PS (18)**.

10

FIG. 59 shows the particular service and/or information request **IQ_n (28)** parsed,
processed, and/or formatted into current request group **QA_{nc} (50)**, request groups
QA_{n1}...QA_{nz} (51), and optional instructions **VJ_{n1}...VJ_{nk} (52)**, and utilization of
information therefrom to make the requests **Q_{n1}...Q_{nm} (29)**, obtain the responses

15 **R_{n1}...R_{nm} (32)**, and incorporate information therefrom into the particular service
and/or information response **IR_n (34)**. The current request group **QA_{nc} (50)** may be
any particular one the request groups **QA_{n1}...QA_{nz} (51)**, which may be selected by the
user **U_n (12)**.

20 Upon receipt of the service and/or information requests **IQ₁...IQ_n (28)** at the server **PS
(18)**, communicated therefrom the corresponding clients **C₁...C_n (16)**, the server **PS
(18)** parses, processes, and/or formats each of the service and/or information requests

00000 00000 00000

IQ₁...IQ_n (28) into the corresponding current request groups **QA_{1c}...QA_{nc} (50)** having corresponding queries **QQ₁₁...QQ_{nm} (53)** and corresponding server addresses **AQ₁₁...AQ_{nm} (54)** to open connections with and make the requests **Q₁₁...Q_{nm} (29)** thereof the servers **S₁...S_z (20)**, in accordance with the designation scheme which
5 designates the certain ones of the servers **S₁...S_z (20)** to be communicated with corresponding to the requests **Q₁₁...Q_{nm} (29)** as the corresponding server designations **S₁₁...S_{nm} (30)**, shown for a particular one of the service and/or information requests **IQ_n (28)** in FIG. 59.

10 The server **PS (18)** also parses, processes, and/or formats each of the service and/or information requests **IQ₁...IQ_n (28)** into the corresponding request groups **QA₁₁...QA_{nz} (51)** having corresponding other queries **QQ_{1a}...QQ_{nz} (55)** and corresponding other server addresses **AQ_{1a}...AQ_{nz} (56)**, and the corresponding optional instructions **VJ₁₁₁...VJ_{nk} (52)**, also shown for a particular one of the service
15 and/or information requests **IQ_n (28)** in FIG. 59.

The server **PS (18)** opens connections with and makes the requests **Q_{n1}...Q_{nm} (29)** thereof the servers **S₁...S_z (20)**, in accordance with the designation scheme which designates the certain ones of the servers **S₁...S_z (20)** to be communicated with
20 corresponding to the requests **Q_{n1}...Q_{nm} (29)** as the corresponding server designations **S₁₁...S_{nm} (30)**, shown for the particular one of the service and/or information requests **IQ_n (28)** corresponding to the corresponding queries **QQ_{n1}...QQ_{nm} (53)** and the

corresponding server addresses $AQ_{n1} \dots AQ_{nm}$ (54) therein the current request group QA_{nc} (50).

The servers $S_1 \dots S_z$ (20) corresponding to the server designations $S_{11} \dots S_{nm}$ (30),
5 designated in accordance with the designation scheme which designates the certain ones
of the servers $S_1 \dots S_z$ (20) to be communicated with corresponding to the requests
 $Q_{n1} \dots Q_{nm}$ (29) as the corresponding server designations $S_{11} \dots S_{nm}$ (30), respond to
the requests $Q_{n1} \dots Q_{nm}$ (29) with the corresponding responses $R_{n1} \dots R_{nm}$ (32).

10 The server **PS** (18) parses, and/or processes, and/or formats, and/or groups, and/or
organizes each of the responses $R_{n1} \dots R_{nm}$ (32) received from the servers $S_1 \dots S_z$ (20)
corresponding to the server designations $S_{n1} \dots S_{nm}$ (30) into corresponding addressable
response information groups $RG_{n1} \dots RG_{nm}$ (57).

15 The server **PS** (18) may also make additional optional requests $QP_{n1} \dots QP_{nm}$ (58) of
the optional database 41, which may be optionally resident within the server **PS** (18),
and which may reply with the corresponding additional optional responses
 $RA_{n1} \dots RA_{nm}$ (40). The server **PS** (18) parses, and/or processes, and/or formats,
and/or groups, and/or organizes each of the additional optional responses $RA_{n1} \dots RA_{nm}$
20 (40) into corresponding response information groups $RC_{n1} \dots RC_{nm}$ (59).

Information from the current request group QA_{nc} (50) having the corresponding queries
 $QQ_{n1} \dots QQ_{nm}$ (53) and the corresponding server addresses $AQ_{n1} \dots AQ_{nm}$ (54) is

formulated into a corresponding request pointer/address group **QZ_n (60)** having pointers/addresses **PG_{n1}...PG_{nz} (61)** associated therewith.

Each of the pointers/addresses **PG_{n1}...PG_{nz} (61)** are directed to point/address
5 corresponding addressable query pointer/address groups **QG_{n1}...QG_{nz} (62)** associated therewith, which aid in obtaining information and/or services therefrom certain ones of addressable response information groups **RG_{n1}...RG_{nm} (57)** to be incorporated thereinto addressable query information groups **GI_{n1}...GI_{nz} (63)**.

10 Grouping and/or sorting criteria may be incorporated thereinto the optional instructions **VJ_{n1}...VJ_{nk} (52)**, which may be entered thereinto the user interface **I_n (14)** therethrough the user input **UI_n (25)** by the user **U_n (12)**. Grouping and/or sorting criteria may additionally and/or alternatively be optionally resident within the server **PS (18)** and/or the client **C_n (16)**.

15 The grouping and/or sorting criteria gives the user **U_n (12)** the ability to formulate the query information groups **GI_{n1}...GI_{nz} (63)** and the way in which information and/or services from the addressable response information groups **RG_{n1}...RG_{nm} (57)** is presented to the user **U_n (12)** therethrough the user interface **I_n (14)**.

20 Each of the addressable query pointer/address groups **QG_{n1}...QG_{nz} (62)** are associated therewith the corresponding ones of the addressable query information groups **GI_{n1}...GI_{nz} (63)**. The addressable query pointer/address group **QG_{n1} (62)** is, thus,

60550: 610550

associated therewith the addressable query information group \mathbf{GI}_{n1} (63); the addressable query pointer/address group \mathbf{QG}_{n2} (62) is, thus, associated therewith the addressable query information group \mathbf{GI}_{n2} (63); the addressable query pointer/address group \mathbf{QG}_{nz} (62) is, thus, associated therewith the addressable query information group \mathbf{GI}_{nz} (63), and so on.

Each of the addressable query pointer/address groups $\mathbf{QG}_{n1} \dots \mathbf{QG}_{nz}$ (62) is formulated based upon the grouping and/or sorting criteria, which may be incorporated thereinto the optional instructions $\mathbf{VJ}_{n1} \dots \mathbf{VJ}_{nk}$ (52), and/or which may additionally and/or alternatively optionally be resident within the server \mathbf{PS} (18) and/or the client \mathbf{C}_n (16), and/or information within the current request group \mathbf{QA}_{nc} (50).

Each of the addressable query pointer/address groups $\mathbf{QG}_{n1} \dots \mathbf{QG}_{nz}$ (62) has pointers/addresses $\mathbf{PP}_{n11} \dots \mathbf{PP}_{nmr}$ (64) directed to address/point information therein the addressable response information groups $\mathbf{RG}_{n1} \dots \mathbf{RG}_{nm}$ (57) based upon the grouping and/or sorting criteria, which may be incorporated thereinto the optional instructions $\mathbf{VJ}_{n1} \dots \mathbf{VJ}_{nk}$ (52), and/or which may additionally and/or alternatively optionally be resident within the server \mathbf{PS} (18) and/or the client \mathbf{C}_n (16), and/or the corresponding queries $\mathbf{QQ}_{n1} \dots \mathbf{QQ}_{nm}$ (53), and/or the corresponding server addresses $\mathbf{AQ}_{n1} \dots \mathbf{AQ}_{nm}$ (54) within the current request group \mathbf{QA}_{nc} (50).

Information and/or services within each of the addressable response information groups $\mathbf{RG}_{n1} \dots \mathbf{RG}_{nm}$ (57) is addressed therewith the pointers/addresses $\mathbf{PP}_{n11} \dots \mathbf{PP}_{nmr}$ (64)

00000-01000000

therefrom the query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62), and information and/or services therefrom the addressable response information groups $RG_{n1} \dots RG_{nm}$ (57) is incorporated thereinto the addressable query information groups $GI_{n1} \dots GI_{nz}$ (63) corresponding to the pointers/addresses $PP_{n11} \dots PP_{nmr}$ (64), which are formulated by the addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62), in accordance with the grouping and/or sorting criteria.

The corresponding other queries $QQ_{na} \dots QQ_{nz}$ (55) and the corresponding other server addresses $AQ_{na} \dots AQ_{nz}$ (56) therein the corresponding request groups $QA_{n1} \dots QA_{nz}$ (51) may be used for other ones of the requests $Q_{n1} \dots Q_{nm}$ (29), and may be incorporated into the service and/or information response IR_n (34), as part of other information OI_n (65), for future use.

Each of the addressable query information groups $GI_{n1} \dots GI_{nz}$ (63) is incorporated thereinto the service and/or information group G_n (35). The service and/or information group G_n (35) and the other information OI_n (65) are incorporated thereinto the service and/or information response IR_n (34).

The optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) may be used by the server PS (18) in making the requests $Q_{n1} \dots Q_{nm}$ (29) and/or the additional optional requests $QP_{n1} \dots QP_{nm}$ (58) of the optional database 41, and/or in processing, formatting, grouping, and organizing the responses $R_{n1} \dots R_{nm}$ (32) from the ones of the servers $S_1 \dots S_z$ (20) corresponding to the server designations $S_{n1} \dots S_{nm}$ (30), and/or the

2025 RELEASE UNDER E.O. 14176

additional optional responses $RA_{n1}\dots RA_{nm}$ (40), into the corresponding service and/or information responses $IR_1\dots IR_n$ (34), for grouping and/or sorting criteria instructions, and/or may be used for other purposes.

5 FIG. 60 is a schematic representation of the particular service and/or information request IQ_n (28) parsed, processed, and/or formatted into a current request group QA_n (50), request groups $QA_{n1}\dots QA_{nz}$ (51), and corresponding optional instructions $VJ_{n1}\dots VJ_{nk}$ (52), and utilization of information therefrom to make the requests $Q_{n1}\dots Q_{nm}$ (29), obtain the responses $R_{n1}\dots R_{nm}$ (32), and incorporate information
10 therefrom into the particular service and/or information response IR_n (34), having simpler grouping/sorting that may be used additionally and/or alternatively to that of FIG. 59.

The user U_n (12) is typically given the option therethrough the optional instructions
15 $VJ_{n1}\dots VJ_{nk}$ (52) as to the grouping and/or sorting criteria to be entered thereinto the user interface I_n (14) therethrough the user input UI_n (25) by the user U_n (12). The user U_n (12) is typically given the choice as to the grouping and/or sorting criteria to be used as in FIG. 59, and/or the grouping and/or sorting criteria of FIG. 60.

20 Information from the current request group QA_{nc} (50) having the corresponding queries $QQ_{n1}\dots QQ_{nm}$ (53) and the corresponding server addresses $AQ_{n1}\dots AQ_{nm}$ (54) is formulated into a corresponding request pointer/address group QY_n (68) having pointers/addresses $PF_{n11}\dots PF_{nmr}$ (69) associated therewith, as shown in FIG. 60.

Each of the pointers/addresses **PF_{n11}...PF_{nmr} (69)** are directed to point/address the corresponding addressable response information groups **RG_{n1}...RG_{nm} (57)**, and aid in obtaining information and/or services therefrom the corresponding addressable response information groups **RG_{n1}...RG_{nm} (57)** to be incorporated thereinto the addressable query information groups **GI_{n1}...GI_{nz} (63)**, as shown in FIG. 60.

The grouping and/or sorting criteria allow the user **U_n (12)** to direct the server **PS (18)** and/or the client **C_n (16)** to sort information and/or services therefrom the responses the responses **R_{n1}...R_{nm} (32)** and/or the additional optional responses **RA_{n1}...RA_{nm} (40)** therefrom the optional database **41**, such as, for example, by category, query, group, page, order of importance, ascending and/or descending order, alphabetically and/or numerically, value, price, and/or other characteristics, and/or to combine and/or interleave the information and/or services therefrom the responses the responses **R_{n1}...R_{nm} (32)** and/or the additional optional responses **RA_{n1}...RA_{nm} (40)** one with the other, such as, for example, by order of relevance and/or other parameters.

FIG. 61 shows the particular service and/or information response **IR_n (34)** having a service and/or information group **G_n (35)**, additional request links **SL_{n1}...SL_{nw} (71)**, optional order form **72**, optional additional advertisements and/or links **73**, optional hidden information **74**, and the optional service and/or information entry request form **IE_n (38)**.

000000000000000000

may alternatively and/or additionally communicate the order confirmation received therefrom the servers $S_1 \dots S_z$ (20) and/or the optional servers $SO_1 \dots SO_p$ (22) thereto the client C_n (16), which may communicate the order confirmation thereto the user interface I_n (14) for presentation to the user U_n (12). The order placement and/or the order confirmation may be stored within the server PS (18) and/or the client C_n (16). The order placement and/or the order confirmation is typically secure, and may be encrypted, and is typically communicated using secure communications means.

C. CERTAIN ONES OF THE CLIENTS

Certain ones of the clients $C_1 \dots C_n$ (16) may alternatively and/or additionally make the requests $Q_{11} \dots Q_{nm}$ (29) thereof the servers $S_1 \dots S_z$ (20), in accordance with the designation scheme which designates the certain ones of the servers $S_1 \dots S_z$ (20) to be communicated with corresponding to the requests $Q_{11} \dots Q_{nm}$ (29), and formulate the corresponding user service and/or information response $ir_1 \dots ir_n$ (36), as previously described.

FIG. 62 shows a typical particular one of the user service and/or information requests $iq_1 \dots iq_n$ (27), designated as the user service and/or information request iq_n (27), having the queries $QQ_{n1} \dots QQ_{nm}$ (53), the corresponding server addresses $AQ_{n1} \dots AQ_{nm}$ (54), and the optional instructions $VJ_{n1} \dots VJ_{nk}$ (52). The server addresses $AQ_{n1} \dots AQ_{nm}$ (54) and the optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) may be

optional, and may depend upon the user interface I_n (14), and/or other information resident within the client C_n (16).

FIG. 63 shows the particular user service and/or information request iq_n (27) parsed, processed, and/or formatted into the current request group QA_{nc} (50), the request groups $QA_{n1}...QA_{nz}$ (51), and the corresponding optional instructions $VJ_{n1}...VJ_{nk}$ (52), and utilization of information therefrom to make the requests $Q_{n1}...Q_{nm}$ (29), obtain the responses $R_{n1}...R_{nm}$ (32), and incorporate information therefrom into the particular user service and/or information response ir_n (36);

10

The server PS (18) makes the requests $Q_{11}...Q_{nm}$ (29) thereof the servers $S_1...S_z$ (20), in accordance with the designation scheme which designates the certain ones of the servers $S_1...S_z$ (20) to be communicated with corresponding to the requests $Q_{11}...Q_{nm}$ (29) as the corresponding server designations $S_{11}...S_{nm}$ (30), as shown in FIG. 59, and certain ones of the clients $C_1...C_n$ (16) may additionally and/or alternatively make the requests $Q_{11}...Q_{nm}$ (29) thereof the servers $S_1...S_z$ (20), in accordance with the designation scheme which designates the certain ones of the servers $S_1...S_z$ (20) to be communicated with corresponding to the requests $Q_{11}...Q_{nm}$ (29) as the corresponding server designations $S_{11}...S_{nm}$ (30), as shown in FIG. 63.

20

The clients C_n (16) may parse, process, and/or format the user service and/or information requests iq_n (27) and/or organize and/or group information and/or services therefrom the addressable response information groups $RG_{n1}...RG_{nm}$ (57) thereinto

the addressable query information groups $\mathbf{GI}_{n1} \dots \mathbf{GI}_{nz}$ (63) substantially the same as the server \mathbf{PS} (18) parses, processes, and/or formats the service and/or information requests \mathbf{IQ}_n (28) therefrom the addressable response information groups $\mathbf{RG}_{n1} \dots \mathbf{RG}_{nm}$ (57) thereinto the addressable query information groups $\mathbf{GI}_{n1} \dots \mathbf{GI}_{nz}$ (63), except that the client \mathbf{C}_n (16) may organize the addressable query information groups $\mathbf{GI}_{n1} \dots \mathbf{GI}_{nz}$ (63) thereinto the user service and/or information response \mathbf{ir}_n (36), as in FIG. 63, and the server \mathbf{PS} (18) organizes the addressable query information groups $\mathbf{GI}_{n1} \dots \mathbf{GI}_{nz}$ (63) thereinto the corresponding service and/or information response \mathbf{IR}_n (34), as in FIG. 59.

10

Upon receipt of the user service and/or information requests $\mathbf{iq}_1 \dots \mathbf{iq}_n$ (27) at the corresponding clients $\mathbf{C}_1 \dots \mathbf{C}_n$ (16), certain ones of the corresponding clients $\mathbf{C}_1 \dots \mathbf{C}_n$ (16) may parse, process, and/or format the corresponding user service and/or information requests $\mathbf{iq}_1 \dots \mathbf{iq}_n$ (27) into the corresponding current request groups $\mathbf{QA}_{1c} \dots \mathbf{QA}_{nc}$ (50) having the corresponding queries $\mathbf{QQ}_{11} \dots \mathbf{QQ}_{nm}$ (53) and the corresponding server addresses $\mathbf{AQ}_{11} \dots \mathbf{AQ}_{nm}$ (54) to open connections with and make the requests $\mathbf{Q}_{11} \dots \mathbf{Q}_{nm}$ (29) thereof the servers $\mathbf{S}_1 \dots \mathbf{S}_z$ (20), in accordance with the designation scheme which designates the certain ones of the servers $\mathbf{S}_1 \dots \mathbf{S}_z$ (20) to be communicated with corresponding to the requests $\mathbf{Q}_{11} \dots \mathbf{Q}_{nm}$ (29) as the corresponding server designations $\mathbf{S}_{11} \dots \mathbf{S}_{nm}$ (30), shown for a particular one of the user service and/or information requests $\mathbf{iq}_1 \dots \mathbf{iq}_n$ (27) in FIG. 63.

20

00000'0000000000

The corresponding clients $C_1 \dots C_n$ (16) may also parse, process, and/or format the corresponding user service and/or information response $ir_1 \dots ir_n$ (36) into the corresponding request groups $QA_{11} \dots QA_{nz}$ (51) having the corresponding other queries $QQ_{1a} \dots QQ_{nz}$ (55) and the corresponding other server addresses $AQ_{1a} \dots AQ_{nz}$ (56), and the corresponding optional instructions $VJ_{111} \dots VJ_{nk}$ (52), also shown for a particular one of the user service and/or information requests iq_n (27) in FIG. 63.

A particular one of the corresponding clients $C_1 \dots C_n$ (16), designated as the client C_n (16), may open connections with and make the requests $Q_{n1} \dots Q_{nm}$ (29) thereof the servers $S_1 \dots S_z$ (20), in accordance with the designation scheme which designates the certain ones of the servers $S_1 \dots S_z$ (20) to be communicated with corresponding to the requests $Q_{n1} \dots Q_{nm}$ (29) as the corresponding server designations $S_{11} \dots S_{nm}$ (30), shown for the particular one of the user service and/or information requests iq_n (27) corresponding to the corresponding queries $QQ_{n1} \dots QQ_{nm}$ (53) and the corresponding server addresses $AQ_{n1} \dots AQ_{nm}$ (54) therein the current request group QA_{nc} (50).

The servers $S_1 \dots S_z$ (20) corresponding to the server designations $S_{11} \dots S_{nm}$ (30), designated in accordance with the designation scheme which designates the certain ones of the servers $S_1 \dots S_z$ (20) to be communicated with corresponding to the requests $Q_{n1} \dots Q_{nm}$ (29) as the corresponding server designations $S_{11} \dots S_{nm}$ (30), respond to the requests $Q_{n1} \dots Q_{nm}$ (29) with the corresponding responses $R_{n1} \dots R_{nm}$ (32).

The client C_n (16) may parse, and/or process, and/or format, and/or group, and/or organize each of the responses $R_{n1}...R_{nm}$ (32) received from the servers $S_1...S_z$ (20) corresponding to the server designations $S_{n1}...S_{nm}$ (30) into the corresponding addressable response information groups $RG_{n1}...RG_{nm}$ (57).

5

The client C_n (16) may also make additional optional requests $QP_{n1}...QP_{nm}$ (58) of the optional database 42, which may be optionally resident within the client C_n (16), and which may reply with the corresponding additional optional responses $RA_{n1}...RA_{nm}$ (40). The client C_n (16) may parse, and/or process, and/or format, and/or group, and/or organize each of the additional optional responses $RA_{n1}...RA_{nm}$ (40) into the corresponding response information groups $RC_{n1}...RC_{nm}$ (59).

10

Now again, for the client C_n (16), information from the current request group QA_{nc} (50) having the corresponding queries $QQ_{n1}...QQ_{nm}$ (53) and the corresponding server addresses $AQ_{n1}...AQ_{nm}$ (54) is formulated into the corresponding request pointer/address group QZ_n (60) having the pointers/addresses $PG_{n1}...PG_{nz}$ (61) associated therewith.

15

Now again, for the client C_n (16), each of the pointers/addresses $PG_{n1}...PG_{nz}$ (61) are directed to point/address the corresponding addressable query pointer/address groups $QG_{n1}...QG_{nz}$ (62) associated therewith, which aid in obtaining information and/or services therefrom certain ones of the addressable response information groups

20

RG_{n1}...RG_{nm} (57) to be incorporated therein to the addressable query information groups **GI_{n1}...GI_{nz} (63)**.

Yet again, for the client **C_n (16)**, grouping and/or sorting criteria may be incorporated
5 thereinto the optional instructions **VJ_{n1}...VJ_{nk} (52)**, which may be entered therein to the user interface **I_n (14)** therethrough the user input **UI_n (25)** by the user **U_n (12)**. Grouping and/or sorting criteria may additionally and/or alternatively optionally resident within the server **PS (18)** and/or the client **C_n (16)**.

10 Now again, the grouping and/or sorting criteria gives the user **U_n (12)** the ability to formulate the query information groups **GI_{n1}...GI_{nz} (63)** and the way in which information from the addressable response information groups **RG_{n1}...RG_{nm} (57)** is presented to the user **U_n (12)** therethrough the user interface **I_n (14)**.

15 Now again, for the client **C_n (16)**, each of the addressable query pointer/address groups **QG_{n1}...QG_{nz} (62)** are associated therewith the corresponding ones of the addressable query information groups **GI_{n1}...GI_{nz} (63)**. Each of the addressable query pointer/address groups **QG_{n1}...QG_{nz} (62)** is formulated based upon the grouping and/or sorting criteria, which may be incorporated therein to the optional instructions
20 **VJ_{n1}...VJ_{nk} (52)**, and/or which may additionally and/or alternatively optionally be resident within the server **PS (18)** and/or the client **C_n (16)**, and/or information within the current request group **QA_{nc} (50)**.

2025 RELEASE UNDER E.O. 14176

00000 00000000

Now again, for the client C_n (16), each of the addressable query pointer/address groups $QG_{n1}...QG_{nz}$ (62) has pointers/addresses $PP_{n11}...PP_{nmr}$ (64) directed to address/point services and/or information therein the addressable response information groups $RG_{n1}...RG_{nm}$ (57) based upon the grouping and/or sorting criteria, which may be incorporated thereinto the optional instructions $VJ_{n1}...VJ_{nk}$ (52), and/or which may additionally and/or alternatively optionally be resident within the server PS (18) and/or the client C_n (16), and/or the corresponding queries $QQ_{n1}...QQ_{nm}$ (53), and/or the corresponding server addresses $AQ_{n1}...AQ_{nm}$ (54) within the current request group QA_{nc} (50).

10

Yet again, for the client C_n (16), the information and/or services therein each of the addressable response information groups $RG_{n1}...RG_{nm}$ (57) is addressed therewith the pointers/addresses $PP_{n11}...PP_{nmr}$ (64) therefrom the query pointer/address groups $QG_{n1}...QG_{nz}$ (62), and information and/or services therefrom the addressable response information groups $RG_{n1}...RG_{nm}$ (57) is incorporated thereinto the addressable query information groups $GI_{n1}...GI_{nz}$ (63) corresponding to the pointers/addresses $PP_{n11}...PP_{nmr}$ (64), which are formulated by the addressable query pointer/address groups $QG_{n1}...QG_{nz}$ (62), in accordance with the grouping and/or sorting criteria.

20 Yet again, for the client C_n (16), the corresponding other queries $QQ_{na}...QQ_{nz}$ (55) and the corresponding other server addresses $AQ_{na}...AQ_{nz}$ (56) therein the corresponding request groups $QA_{n1}...QA_{nz}$ (51) may be used for other ones of the

requests $Q_{n1} \dots Q_{nm}$ (29), and may be incorporated into the user service and/or information response ir_n (36), as part of other information OI_n (65), for future use.

Now again, for the client C_n (16), each of the addressable query information groups
5 $GI_{n1} \dots GI_{nz}$ (63) is incorporated therein to the service and/or information group G_n (35). The service and/or information group G_n (35) and the other information OI_n (65) are incorporated therein to the service and/or information response IR_n (34).

The optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) may be used by the client C_n (16), in
10 making the requests $Q_{n1} \dots Q_{nm}$ (29) and/or the additional optional requests $QP_{n1} \dots QP_{nm}$ (58) of the optional database 42, and/or in processing, formatting, grouping, and organizing the responses $R_{n1} \dots R_{nm}$ (32) from the ones of the servers $S_1 \dots S_z$ (20) corresponding to the server designations $S_{n1} \dots S_{nm}$ (30), and/or the additional optional responses $RA_{n1} \dots RA_{nm}$ (40), into user service and/or information
15 response ir_n (36), for grouping and/or sorting criteria instructions, and/or may be used for other purposes.

FIG. 64 is a schematic representation of the particular user service and/or information request iq_n (27) parsed, processed, and/or formatted into the current request group
20 QA_{nc} (50), the request groups $QA_{n1} \dots QA_{nz}$ (51), and the corresponding optional instructions $VJ_{n1} \dots VJ_{nk}$ (52), and utilization of information therefrom to make the requests $Q_{n1} \dots Q_{nm}$ (29), obtain the responses $R_{n1} \dots R_{nm}$ (32), and incorporate information therefrom into the particular user service and/or information response ir_n

(36), having simpler grouping/sorting that may be used additionally and/or alternatively to that of FIG. 63.

The user U_n (12) is typically given the option therethrough the optional instructions
5 $VJ_{n1}...VJ_{nk}$ (52) as to the grouping and/or sorting criteria to be entered thereinto the user interface I_n (14) therethrough the user input UI_n (25) by the user U_n (12). The user U_n (12) is typically given the choice as to the grouping and/or sorting criteria of FIG. 63, and/or the grouping and/or sorting criteria of FIG. 64.

10 Now again, the client C_n (16) may parse, process, and/or format the user service and/or information requests Iq_n (27) and/or organize and/or group information and/or services therefrom the addressable response information groups $RG_{n1}...RG_{nm}$ (57) thereinto the addressable query information groups $GI_{n1}...GI_{nz}$ (63) substantially the same as the server PS (18) parses, processes, and/or formats the service and/or information
15 requests IQ_n (28) therefrom the addressable response information groups $RG_{n1}...RG_{nm}$ (57) thereinto the addressable query information groups $GI_{n1}...GI_{nz}$ (63), except that the client C_n (16) may organize the addressable query information groups $GI_{n1}...GI_{nz}$ (63) thereinto the user service and/or information response Ir_n (36), as in FIG. 64, and the server PS (18) organizes the addressable query information
20 groups $GI_{n1}...GI_{nz}$ (63) thereinto the corresponding service and/or information response IR_n (34), as in FIG. 60.

www.china.com

00000-000000

Now again, for the client C_n (16), information from the current request group QA_{nc} (50) having the corresponding queries $QQ_{n1}...QQ_{nm}$ (53) and the corresponding server addresses $AQ_{n1}...AQ_{nm}$ (54) is formulated into the corresponding request pointer/address group QY_n (68) having the pointers/addresses $PF_{n11}...PF_{nmr}$ (69) associated therewith, as shown in FIG. 64.

Now again, for the client C_n (16), each of the pointers/addresses $PF_{n11}...PF_{nmr}$ (69) are directed to point/address the corresponding addressable response information groups $RG_{n1}...RG_{nm}$ (57), and aid in obtaining information and/or services therefrom the corresponding addressable response information groups $RG_{n1}...RG_{nm}$ (57) to be incorporated therein to the addressable query information groups $GI_{n1}...GI_{nz}$ (63), as shown in FIG. 64.

Again, the grouping and/or sorting criteria allow the user U_n (12) to direct the server PS (18) and/or the client C_n (16) to sort information and/or services therefrom the responses the responses $R_{n1}...R_{nm}$ (32) and/or the additional optional responses $RA_{n1}...RA_{nm}$ (40) therefrom the optional database 41, such as, for example, by category, query, group, page, order of importance, ascending and/or descending order, alphabetically and/or numerically, value, price, and/or other characteristics, and/or to combine and/or interleave the information and/or services therefrom the responses the responses $R_{n1}...R_{nm}$ (32) and/or the additional optional responses $RA_{n1}...RA_{nm}$ (40) one with the other, such as, for example, by order of relevance and/or other parameters.

00000-040150

FIG. 65 shows the particular user service and/or information response ir_n (36) having the service and/or information group G_n (35), the additional request links $SL_{n1}\dots SL_{nw}$ (71), the optional order form 72, the optional additional advertisements and/or links 73, the optional hidden information 74, and the optional service and/or information
5 entry request form IE_n (38).

Now again, the service and/or information group G_n (35) has the query information groups $GI_{n1}\dots GI_{nz}$ (63), the optional database response groups 75, and the optional additional advertisements and/or links 76.

10 Yet again, the additional request links $SL_{n1}\dots SL_{nw}$ (71) allow the user U_n (12) to make additional optional selections, based upon information and/or services previously requested by the user U_n (12). The additional request links $SL_{n1}\dots SL_{nw}$ (71), which are optional, may typically have Current Group/Next Group/Previous Group/Group
15 Number Links, Server Names in Each Group, Queries in Each Group, Current Page/Next Page/Previous Page/Page Number Links, Search Display/Link and/or Description Placement/Interleave/Separate, and Link Description Options/Summary/Minimize. Other additional ones of the additional request links $SL_{n1}\dots SL_{nw}$ (71) and/or combinations thereof may also be incorporated thereto the
20 user service and/or information response ir_n (36).

Now again, for the client C_n (16), the optional order form 72 allows direct placement and/or confirmation of orders and/or purchases therewith the servers $S_1\dots S_z$ (20)

065401-001-0000

and/or the optional servers **SO₁...SO_p (22)**, which reside on the network **24**. The user **U_n (12)** may enter the order placement therein to the user interface **I_n (14)** therethrough the user input **UI_n (25)**, and receive order confirmation therethrough the user interface **I_n (14)**. The client **C_n (16)** may communicate the order placement therefrom the user interface **I_n (14)** thereto the servers **S₁...S_z (20)** and/or the optional servers **SO₁...SO_p (22)**, and/or receive the order confirmation therefrom, and communicate the order confirmation therefrom the servers **S₁...S_z (20)** and/or the optional servers **SO₁...SO_p (22)** thereto the user interface **I_n (14)** for presentation to the user **U_n (12)**. The order placement and/or the order confirmation may be stored within the server **PS (18)** and/or the client **C_n (16)**. The order placement and/or the order confirmation is typically secure, and may be encrypted, and is typically communicated using secure communications means.

D. FORMULATING QUERY INFORMATION GROUPS

Each of the particular addressable response information groups **RG_{n1}...RG_{nm} (57)**, designated as the addressable response information group **RG_{nm} (57)**, has optional addressable individual information groups **LG_{nm1}...LG_{nmr} (80)**, which may be addressed therewith the pointers/addresses **PP_{nm1}...PP_{nmr} (64)**, as shown in FIGS. 59, 63, 66A, 66B, and 66C.

Each of the addressable response information groups **RG_{n1}...RG_{nm} (57)** and each of the optional addressable individual information groups **LG_{n11}...LG_{nmr} (80)** therein

each of the addressable response information groups $RG_{n1} \dots RG_{nm}$ (57) may be addressed therewith the pointers/addresses $PP_{n11} \dots PP_{nmr}$ (64).

Now again, the addressable response information group RG_{nm} (57) has the optional
5 addressable individual information groups $LG_{nm1} \dots LG_{nmr}$ (80), which may be addressed therewith the pointers/addresses $PP_{nm1} \dots PP_{nmr}$ (64). Each of the addressable individual information groups $LG_{nm1} \dots LG_{nmr}$ (80) therein the addressable response information group RG_{nm} (57) may be pointed/addressed by the server PS (18) and/or the client C_n (16) to retrieve all and/or a portion and/or combinations
10 thereof of specific ones of the addressable individual information groups $LG_{nm1} \dots LG_{nmr}$ (80), therefrom the addressable response information group RG_{nm} (57), and incorporate information and/or services therefrom the addressable individual information groups $LG_{nm1} \dots LG_{nmr}$ (80) thereinto certain ones of the addressable query information groups $GI_{n1} \dots GI_{nz}$ (63), in accordance with the grouping and/or sorting
15 criteria addressing scheme.

The addressable response information group RG_{nm} (57) having the optional addressable individual information groups $LG_{nm1} \dots LG_{nmr}$ (80) may have optional addressable pointer/address indices $IN_{nm1} \dots IN_{nmr}$ (81) correspondingly associated
20 therewith the optional addressable individual information groups $LG_{nm1} \dots LG_{nmr}$ (80), which may be addressed/pointed therewith the pointers/addresses $PP_{nm1} \dots PP_{nmr}$ (64), and which may be pointed/addressed by the server PS (18) and/or the client C_n (16) to retrieve all and/or a portion and/or combinations thereof of specific ones of the

00000"0120250

addressable individual information groups **LG_{nm1}...LG_{nmr} (80)**, and incorporate information and/or services therefrom the addressable individual information groups **LG_{nm1}...LG_{nmr} (80)** thereinto the certain ones of the addressable query information groups **GI_{n1}...GI_{nz} (63)**, in accordance with the grouping and/or sorting criteria

5 addressing scheme.

FIGS. 66A, 66B, and 66C show the addressable response information group **RG_{nm} (57)** having the addressable individual information groups **LG_{nm1}...LG_{nmr} (80)** showing the optional addressable pointer/address indices **IN_{nm1}...IN_{nmr} (81)** correspondingly

10 associated therewith the optional addressable individual information groups **LG_{nm1}...LG_{nmr} (80)**, which may be addressed/pointed therewith the pointer/addresses **PP_{nm1} (64), PP_{nm2} (64), and PP_{nmr} (64)**, respectively.

The optional addressable pointer/address index **IN_{nm1} (81)** is correspondingly

15 associated therewith the optional addressable individual information group **LG_{nm1} (80)**.

The optional addressable pointer/address index **IN_{nm2} (81)** is correspondingly associated therewith the optional addressable individual information group **LG_{nm2} (80)**, and so on. The optional addressable pointer/address index **IN_{nmr} (81)** is, thus, correspondingly associated therewith the optional addressable individual information

20 group **LG_{nm1} (80)**.

The pointers/addresses **PG_{n1}...PG_{nz} (61)** may be formulated as arrays and/or lists.

The pointers/addresses **PP_{nm1}...PP_{nmr} (64)** and/or the pointers/addresses

$PF_{nm1} \dots PF_{nmr}$ (69) may be formulated as arrays and/or lists. The arrays may be multidimensional arrays, and the lists may be lists within lists.

The optional addressable individual information group LG_{nmr} (80) is associated
5 therewith and corresponds to a particular one of the addressable individual information
groups $LG_{nm1} \dots LG_{nmr}$ (80) therein a particular one of the addressable response
information groups $RG_{n1} \dots RG_{nm}$ (57), designated as the addressable response
information group RG_{nm} (57). The first subscript of the optional addressable
individual information groups LG_{nmr} (80) is associated therewith and corresponds to
10 the particular service and/or information request IQ_n (28) and/or the user service and/or
information request iq_n (27). The second subscript of the optional addressable
individual information groups LG_{nmr} (80) is associated therewith and corresponds to a
particular one of "1" through "m" i.e., 1.....m, of the addressable response
information group $RG_{n1} \dots RG_{nm}$ (57). The third subscript of the optional addressable
15 individual information groups LG_{nmr} (80) is associated therewith and corresponds to a
particular one of "1" through "r" i.e., 1.....r, of the optional addressable individual
information group $LG_{nm1} \dots LG_{nmr}$ (80) within the addressable response information
group RG_{nm} (57).

20 The subscripts of the optional addressable pointer/address indices $IN_{nm1} \dots IN_{nmr}$ (81)
are correspondingly associated therewith the subscripts of the corresponding
addressable individual information groups $LG_{nm1} \dots LG_{nmr}$ (80).

A number and variety of pointing/addressing schemes are possible, which may be used for a variety of grouping and sorting criteria schemes and addressing/pointing schemes.

For example, the pointers/addresses $PG_{n1} \dots PG_{nz}$ (61) of the request pointer/address group QZ_n (60) may be pointed/addressed thereto certain ones of the addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62), in accordance with certain grouping and/or sorting criteria schemes and/or pointing/addressing schemes. The pointers/addresses $PP_{n11} \dots PP_{nmr}$ (64) of each of the pointed/addressed addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62) may be pointed thereto the pointer/address indices $IN_{n11} \dots IN_{nmr}$ (81) of the optional addressable individual information groups $LG_{nm1} \dots LG_{nmr}$, i.e., 1.....r, and the pointers/addresses $PP_{n11} \dots PP_{nmr}$ (64), i.e., 1.....m, corresponding to the addressable response information groups $RG_{n1} \dots RG_{nm}$ (57) formulated by the addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62) may be pointed thereto certain ones of the addressable response information groups $RG_{n1} \dots RG_{nm}$ (57), in accordance with certain grouping and/or sorting criteria schemes and/or addressing schemes. This subprocess may be repeated until the information and/or services from the optional addressable individual information groups $LG_{nm1} \dots LG_{nmr}$ from the addressable response information groups $RG_{n1} \dots RG_{nm}$ (57) is incorporated thereto the certain ones of the addressable query information groups $GI_{n1} \dots GI_{nz}$ (63), in accordance with the grouping and/or sorting criteria addressing scheme, as formulated by the addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62) and the request pointer/address group QZ_n (60).

000000000000000000000000

Alternatively and/or additionally, the pointers/addresses **PG_{n1...nz} (61)** of the request pointer/address group **QZ_n (60)** may be incremented therethrough each of the addressable query pointer/address groups **QG_{n1...nz} (62)**. The pointers/addresses **PP_{n11...PP_{nmr}} (64)** of each of the pointed/addressed addressable query pointer/address

5 groups **QG_{n1...nz} (62)** may be pointed to the pointer/address indices **IN_{n11...IN_{nmr}} (81)** of the optional addressable individual information groups **LG_{nm1...LG_{nmr}} (81)**, i.e., 1.....r, and incremented once, and then the pointers/addresses **PP_{n11...PP_{nmr}} (64)**, i.e., 1.....m, corresponding to the addressable response information groups

RG_{n1...RG_{nm}} (57) formulated by the addressable query pointer/address groups

10 **QG_{n1...nz} (62)** may be incremented therethrough each of the addressable response information groups **RG_{n1...RG_{nm}} (57)**. This subprocess may be repeated until the information and/or services from the optional addressable individual information groups **LG_{nm1...LG_{nmr}} (81)** from the addressable response information groups

RG_{n1...RG_{nm}} (57) is incorporated therein to the certain ones of the addressable query

15 information groups **GI_{n1...GI_{nz}} (63)**, in accordance with the grouping and/or sorting criteria addressing scheme, and as formulated by the addressable query pointer/address groups **QG_{n1...nz} (62)**.

Alternatively and/or additionally, the pointers/addresses **PP_{n11...PP_{nmr}} (64)**, i.e.,

20 1.....m, may be incremented, corresponding to the addressable response information groups **RG_{n1...RG_{nm}} (57)** formulated by the addressable query pointer/address groups **QG_{n1...nz} (62)**, and then the pointers/addresses **PP_{n11...PP_{nmr}} (64)**, i.e., 1.....r, pointing to the pointer/address indices **IN_{n11...IN_{nmr}} (81)** of the optional addressable

individual information groups **LG_{nm1...}LG_{nmr}** may then be incremented. This subprocess may be repeated until the information and/or services from the optional addressable individual information groups **LG_{nm1...}LG_{nmr}** from the addressable response information group s **RG_{n1...}RG_{nm} (57)** is incorporated thereinto the certain ones of the addressable query information groups **GI_{n1...}GI_{nz} (63)**, in accordance with the grouping and/or sorting criteria addressing scheme, and as formulated by the addressable query pointer/address groups **QG_{n1...}QG_{nz} (62)**.

Alternatively and/or additionally, the pointers/addresses **PF_{nm1...}PF_{nmr} (69)**, i.e., 1,.....m, may be incremented, corresponding to the addressable response information group s **RG_{n1...}RG_{nm} (57)** formulated by the addressable query pointer/address groups **QG_{n1...}QG_{nz} (62)**, and then the pointers/addresses **PF_{nm1...}PF_{nmr} (69)**, i.e., 1,.....r, pointing to the pointer/address indices **IN_{n11...}IN_{nmr} (81)** of the optional addressable individual information groups **LG_{nm1...}LG_{nmr}** may then be incremented. This subprocess may be repeated until the information and/or services from the optional addressable individual information groups **LG_{nm1...}LG_{nmr}** from the addressable response information group s **RG_{n1...}RG_{nm} (57)** is incorporated thereinto the certain ones of the addressable query information groups **GI_{n1...}GI_{nz} (63)**, in accordance with the grouping and/or sorting criteria addressing scheme, and as formulated by the addressable query pointer/address groups **QG_{n1...}QG_{nz} (62)**.

The typical sorting and/or grouping criteria and the addressing/pointing schemes mentioned immediately above, for example, may group certain ones of the queries

$QQ_{n1} \dots QQ_{nm}$ (53) having the same and/or substantially the same values grouped therein a particular one of the query information groups $G_{I_{nz}} \dots G_{I_{nz}}$ (63), designated as the query information group $G_{I_{nz}}$ (63), as shown in certain ones of FIGS. 27-52.

- 5 The grouping and/or sorting criteria and schemes and the addressing/pointing schemes mentioned herein are but only a small portion of a much larger variety of grouping and/or sorting criteria and schemes and addressing/pointing schemes and/or combinations thereof that the client-server multitasking system **10** of the present invention may use and is capable of. The above mentioned examples are included
10 herein to illustrate but a few examples of the capabilities of the client-server multitasking system **10** of the present invention.

The addressable individual information groups $LG_{nm1} \dots LG_{nmr}$ (80) are typically parsed, and/or processed, and/or formatted for consistency of presentation and/or
15 appearance one with the other, as the addressable individual information groups $LG_{nm1} \dots LG_{nmr}$ (80) are incorporated therewith the addressable response information group s $RG_{n1} \dots RG_{nm}$ (57) therefrom the responses $R_{n1} \dots R_{nm}$ (32).

- 20 Alternatively and/or additionally the addressable individual information groups $LG_{nm1} \dots LG_{nmr}$ (80) may be incorporated therewith the addressable response information group s $RG_{n1} \dots RG_{nm}$ (57) therefrom the responses $R_{n1} \dots R_{nm}$ (32) in an as-is condition and/or in raw form.

000000000000000000000000

The optional addressable individual information groups $\mathbf{LG}_{nm1} \dots \mathbf{LG}_{nmr}$ (80) therein the addressable response information group \mathbf{RG}_{nm} (57), having information and/or services parsed and/or processed, and/or formatted, and/or grouped therefrom the response \mathbf{R}_{nm} (32), may be correspondingly associated therewith the locations of the
5 information and/or services therein the response \mathbf{R}_{nm} (32).

Each of the addressable individual information groups $\mathbf{LG}_{nm1} \dots \mathbf{LG}_{nmr}$ (80) may have and/or be parsed, and/or processed, and/or formatted, and/or organized, and/or grouped into corresponding optional links $\mathbf{LD}_{nm1} \dots \mathbf{LD}_{nmr}$ (82), and/or corresponding optional
10 descriptions $\mathbf{DD}_{nm1} \dots \mathbf{DD}_{nmr}$ (83), and/or corresponding optional prices/values $\mathbf{PD}_{nm1} \dots \mathbf{PD}_{nmr}$ (84), and/or corresponding optional images $\mathbf{ID}_{nm1} \dots \mathbf{ID}_{nmr}$ (85), as shown in FIG. 67.

The optional links $\mathbf{LD}_{nm1} \dots \mathbf{LD}_{nmr}$ (82), the corresponding optional descriptions
15 $\mathbf{DD}_{nm1} \dots \mathbf{DD}_{nmr}$ (83), the corresponding optional prices/values $\mathbf{PD}_{nm1} \dots \mathbf{PD}_{nmr}$ (84), and the corresponding optional images $\mathbf{ID}_{nm1} \dots \mathbf{ID}_{nmr}$ (85), corresponding to the addressable individual information groups $\mathbf{LG}_{nm1} \dots \mathbf{LG}_{nmr}$ (80) are typically associated correspondingly one with the other.

20 The optional link \mathbf{LD}_{nm1} (82), the corresponding optional description \mathbf{DD}_{nm1} (83), the corresponding optional price/value \mathbf{PD}_{nm1} (84), and the corresponding optional image \mathbf{ID}_{nm1} (85), corresponding to the optional individual information group \mathbf{LG}_{nm1} (80) are typically associated correspondingly one with the other. The optional link \mathbf{LD}_{nm2} (82),

00220 04207500

- the corresponding optional description **DD_{nm2} (83)**, the corresponding optional price/value **PD_{nm2} (84)**, and the corresponding optional image **ID_{nm2} (85)**, corresponding to the addressable individual information group **LG_{nm2} (80)** are typically associated correspondingly one with the other, and so on. The optional link **LD_{nmr} (82)**, the corresponding optional description **DD_{nmr} (83)**, the corresponding optional price/value **PD_{nmr} (84)**, and the corresponding optional image **ID_{nmr} (85)**, corresponding to the addressable individual information group **LG_{nmr} (80)** are, thus, typically associated correspondingly one with the other.
- 10 The addressable individual information groups **LG_{nm1}...LG_{nmr} (80)**, which may have the corresponding optional links **LD_{nm1}...LD_{nmr} (82)**, and/or the corresponding optional descriptions **DD_{nm1}...DD_{nmr} (83)**, and/or the corresponding optional prices/values **PD_{nm1}...PD_{nmr} (84)**, and/or the corresponding optional images **ID_{nm1}...ID_{nmr} (85)** are appended therewith labels/identifiers, as shown in FIG. 68, and
- 15 incorporated therein certain ones of the addressable query information groups **GI_{n1}...GI_{nz} (63)**, depending upon the grouping and/or sorting criteria. FIG. 69 shows a particular one of the addressable query information groups **GI_{n1}...GI_{nz} (63)**, designated as the query information group **GI_{nz} (63)**.
- 20 Now again, the optional addressable individual information group **LG_{nmr} (80)** is associated therewith and corresponds to a particular one of the addressable individual information groups **LG_{nm1}...LG_{nmr} (80)** therein a particular one of the addressable response information groups **RG_{n1}...RG_{nm} (57)**, designated as the addressable

response information group **RG_{nm}** (57). The first subscript of the optional addressable individual information groups **LG_{nmr}** (80) is associated therewith and corresponds to the particular service and/or information request **IQ_n** (28) and/or the user service and/or information request **iq_n** (27). The second subscript of the optional addressable individual information groups **LG_{nmr}** (80) is associated therewith and corresponds to a particular one of "1" through "m" i.e., 1.....m, of the addressable response information group **RG_{n1...RG_{nm}}** (57). The third subscript of the optional addressable individual information groups **LG_{nmr}** (80) is associated therewith and corresponds to a particular one of "1" through "r", i.e., 1.....r, of the optional addressable individual information group **LG_{n1...LG_{nmr}}** (80) within the addressable response information group **RG_{nm}** (57).

FIG. 68 shows a labelled individual information group **LL_{nzu}** (86) associated therewith a particular one of the addressable query information groups **GI_{n1...GI_{nz}}** (63), designated as the addressable query information group **GI_{nz}** (63), having optional group identifier **GL_{nc}** (87), optional query link identifier **LN_{ncu}** (88), optional resource location identifier **SU_{nw}** (89), optional server and/or query identifier **SI_{nm}** (90), and/or optional server link identifier **LX_{nmr}** (91) appended thereto the addressable individual information group **LG_{nmr}** (80).

The first alphanumeric subscript of the labelled individual information group **LL_{nzu}** (86) is associated therewith and corresponds to the service and/or information response **IR_n** (34) and/or the user service and/or information response **ir_n** (36). The second

LN_{ncu} (88) labels and/or identifies the labelled individual information group LL_{nzu} (86). The first alphanumeric subscript of the optional query link identifier LN_{ncu} (88) is associated therewith and corresponds to the service and/or information response IR_n (34) and/or the user service and/or information response ir_n (36). The second subscript of the optional query link identifier LN_{ncu} (88) is also associated therewith and corresponds to the particular one of the request groups $QA_{n1} \dots QA_{nz}$ (51) selected by the user U_n (12) as the current request group QA_{nc} (50). The third alphanumeric subscript of the optional query link identifier LN_{ncu} (88) is associated therewith and corresponds to a particular one of "1" through "u", i.e., 1.....u, of the labelled individual information groups $LL_{nz1} \dots LL_{nzu}$ (86) therein the addressable query information group GI_{nz} (63).

The optional resource location identifier SU_{nw} (89) labels and/or identifies resource locations of information and/or services associated therewith and corresponding to the optional addressable individual information group LG_{nmr} (80) therein the labelled individual information group LL_{nzu} (86). The optional resource location identifier SU_{nw} (89) indicates and is associated therewith and corresponds to resource locations of information and/or services associated therewith certain ones of the optional servers $SO_1 \dots SO_p$ (22) and/or certain ones of the servers $S_1 \dots S_z$ (20). The optional resource location identifier SU_{nw} (89) may be obtained from certain information therein the optional addressable individual information group LG_{nmr} (80). The first alphanumeric subscript of the optional resource location identifier SU_{nw} (89) is associated therewith and corresponds to the service and/or information response IR_n (34) and/or the user

5 service and/or information response **ir_n (36)**. The second alphanumeric subscript of the optional resource location identifier **SU_{nw} (89)** is associated therewith and corresponds to a particular one of "1" through "w", i.e., 1.....w, of the optional resource location identifiers **SU_{n1}...SU_{nw} (89)** therein the labelled individual information group **LL_{nzu} (86)**.

10 The optional server and/or query identifier **SI_{nm} (90)** labels and/or identifies the query **QQ_{nm} (53)** and/or the corresponding server address **AQ_{nm} (54)** associated therewith and corresponding to the optional addressable individual information group **LG_{nmr} (80)** therein the corresponding labelled individual information group **LL_{nzu} (86)** of the current request group **QA_{nc} (50)**. The first alphanumeric subscript of the optional server and/or query identifier **SI_{nm} (90)** is associated therewith and corresponds to the service and/or information response **IR_n (34)** and/or the user service and/or information response **ir_n (36)**. The second alphanumeric subscript of the optional server and/or query identifier **SI_{nm} (90)** is associated therewith and corresponds to a particular one of "1" through "m", i.e., 1.....m, of the optional server and/or query identifiers **SI_{n1}...SI_{nm} (90)**, which may be correspondingly associated therewith the corresponding ones of the queries **QQ_{n1}...QQ_{nm} (53)** and/or the corresponding ones of the server addresses **AQ_{n1}...AQ_{nm} (54)**.

20 The optional server link identifier **LX_{nmr} (91)** labels and/or identifies the location of the optional addressable individual information group **LG_{nmr} (80)** therein the corresponding addressable response information groups **RG_{nm} (57)**. The first

alphanumeric subscript of the optional server link identifier LX_{nmr} (91) is associated therewith and corresponds to the service and/or information response IR_n (34) and/or the user service and/or information response ir_n (36). The second alphanumeric subscript of the optional server link identifier LX_{nmr} (91) is associated therewith and corresponds to the addressable response information group RG_{nm} (57). The third alphanumeric subscript of the optional server link identifier LX_{nmr} (91) is associated therewith and corresponds to a particular one of "1" through "r", i.e., 1.....r, of the optional server link identifiers $LX_{nm1}...LX_{nmr}$ (91), which may be correspondingly associated therewith the locations of certain ones of the optional addressable individual information group $LG_{nm1}...LG_{nmr}$ (80) therein the addressable response information groups RG_{nm} (57). The certain ones of the optional addressable individual information groups $LG_{nm1}...LG_{nmr}$ (80) therein the addressable response information group RG_{nm} (57), having information and/or services parsed and/or processed, and/or formatted, and/or grouped therefrom the response R_{nm} (32), which are labelled and/or identified therewith the optional server link identifiers $LX_{nm1}...LX_{nmr}$ (91), are correspondingly associated therewith the locations of the information and/or services therein the response R_{nm} (32). The optional server link identifiers $LX_{nm1}...LX_{nmr}$ (91), thus, identify and/or label the location of services and/or information therein the response R_{nm} (32).

20

FIG. 69 shows the addressable query information group GI_{nz} (63) having the labelled individual information groups $LL_{nz1}...LL_{nzu}$ (86), optional database labelled individual information groups $RL_{nz1}...RL_{nzx}$ (92), optional query description QT_{nz} (93), optional

OFFICE OF THE ATTORNEY GENERAL

FIG. 46 shows the typical one of the user response **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**, with reference to FIG. 22 having: "Search Engine Results" as "Interleave"; "URL's per Search Engine" as "15"; "URL Details" as "Summary"; "Timeout (seconds) per Search Engine" as "3"; "Page" as "1"; "Searches per Group" as "5"; and "Group" as "1". Next Group: II may be selected therefrom the typical one of the user response **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)** of FIG. 46.

FIGS. 47 and 48 show a typical ones of the user response **UR_n (37)**, as the typical service and/or information response forms **IS_n (39)** at the user interface **I_n (14)**, with reference to FIG. 23, having information and/or services therefrom the responses **R_{n1}...R_{nm} (32)** incorporated therein, and incorporated therein Group I. FIGS. 47 and 48 also shows the results of a full text search of the optional database **41** and/or the optional database **42**, which may be associated therewith the typical queries **QQ_{n1}...QQ_{nm} (53)**, and which additionally and/or alternatively may function as an internal search engine. The full text search results are incorporated therefrom the additional optional responses **RA_{n1}...RA_{nm} (40)**. The results of the full text search of the optional database **41** and/or the optional database **42** may be additionally and/or alternatively automatically inserted thereinto the typical one of the user response **UR_n (37)**, as the typical service and/or information response form **IS_n (39)** at the user interface **I_n (14)**, in addition to the typical queries **QQ_{n1}...QQ_{nm} (53)** at the typical ones of the server addresses **AQ_{n1}...AQ_{nm} (54)**. In the typical case shown in FIGS. 47

server descriptions and/or links $ST_{nz1} \dots ST_{nzf}$ (94), and optional advertisements and/or links $LT_{nz1} \dots LT_{nzt}$ (95). The first and second subscripts of the optional database labelled individual information groups $RL_{nz1} \dots RL_{nzx}$ (92), the optional query description QT_{nz} (93), the optional server descriptions and/or links $ST_{nz1} \dots ST_{nzf}$ (94), and the optional advertisements and/or links $LT_{nz1} \dots LT_{nzt}$ (95) are associated therewith and correspond to the addressable query information group GI_{nz} (63). The third subscripts of the optional database labelled individual information groups $RL_{nz1} \dots RL_{nzx}$ (92), the optional server descriptions and/or links $ST_{nz1} \dots ST_{nzf}$ (94), and the optional advertisements and/or links $LT_{nz1} \dots LT_{nzt}$ (95) are associated therewith and correspond to ones of the optional database labelled individual information groups $RL_{nz1} \dots RL_{nzx}$ (92), the optional server descriptions and/or links $ST_{nz1} \dots ST_{nzf}$ (94), and the optional advertisements and/or links $LT_{nz1} \dots LT_{nzt}$ (95), respectively.

15 **IV PROCESS**

FIG. 70 shows steps of a client-server multitasking process 99 of the present invention. The client-server multitasking process 99 is shown for the client-server multitasking system 10 for a particular one of the users $U \dots U_n$ (12), designated as the user U_n (12), the corresponding particular one of the user interfaces $I \dots I_n$ (14), designated as the user interface I_n (14), the corresponding particular one of the clients $C \dots C_n$ (16), designated as the client C_n (16), the server PS (18), the servers $S_1 \dots S_z$ (20), and the optional servers $SO_1 \dots SO_p$ (22), which reside on the network 24.

The client-server multitasking process **99** starts at step **101**. The user **U_n (12)** enters the user input **UI_n (25)** thereinto the user interface **I_n (14)** (step **102**). The user input **UI_n (25)** is formulated thereinto the user service and/or information request **iq_n (27)** at the user interface **I_n (14)** and communicated thereto the client **C_n (16)** (step **103**). The user service and/or information request **iq_n (27)** may be formulated thereinto the service and/or information request **IQ_n (28)** at the client **C_n (16)** and communicated thereto the server **PS (18)** (also step **103**).

The service and/or information response **IR_n (34)** and/or the user service and/or information response **ir_n (36)** are derived at the server **PS (18)** and/or the client **C_n (16)**, respectively, at step **104**, which in itself is a process, and may hereinafter be referred to as the multitasking process **104**. The multitasking process **104** will be discussed in more detail later with reference to FIGS. 70-1A and 70-1B.

Now, continuing with FIG. 70, the user service and/or information response **ir_n (36)** may be derived at the client **C_n (16)** (step **104**) therefrom the service and/or information response **IR_n (34)**, which may be communicated thereto the client **C_n (16)** therefrom the server **PS (18)** (also step **104**), and/or alternatively and/or additionally therefrom the responses **R_{n1...R_{nm} (32)}**, which may be communicated thereto the client **C_n (16)** (step **104**).

Now, the client **C_n (16)** may communicate the service and/or information request **IQ_n (28)** thereto the server **PS (18)** (step **103**). The service and/or information response

IR_n (34) is then derived at the server **PS (18)** (step **104**) and communicated thereto the client **C_n (16)** (also step **104**). The user service and/or information response **ir_n (36)** may be derived therefrom the service and/or information response **IR_n (34)** (also step **104**).

5

Now, in more detail, if the service and/or information request **IQ_n (28)** is communicated thereto the server **PS (18)** (step **103**), then the server **PS (18)** makes the requests **Q_{n1}...Q_{nm} (29)** and/or certain ones of the requests **Q_{n1}...Q_{nm} (29)** thereof the servers **S₁...S_z (20)**, in accordance with the designation scheme which designates the certain ones of the servers **S₁...S_z (20)** to be communicated with corresponding to the requests **Q_{n1}...Q_{nm} (29)** as the corresponding server designations **S_{n1}...S_{nm} (30)**, utilizing information therefrom the service and/or information request **IQ_n (28)**. The service and/or information response **IR_n (34)** is then derived at the server **PS (18)** (step **104**) therefrom the responses **R_{n1}...R_{nm} (32)** received from the servers **S₁...S_z (20)** corresponding to the server designations **S_{n1}...S_{nm} (30)**, and communicated thereto the client **C_n (16)**. Now, again, the user service and/or information response **ir_n (36)** may be derived therefrom the service and/or information response **IR_n (34)** (also step **104**).

Now, also in more detail, alternatively and/or additionally, the client **C_n (16)** may make the requests **Q_{n1}...Q_{nm} (29)** and/or certain other ones of the requests **Q_{n1}...Q_{nm} (29)** thereof the servers **S₁...S_z (20)**, in accordance with the designation scheme which designates the certain ones of the servers **S₁...S_z (20)** to be communicated with corresponding to the requests **Q_{n1}...Q_{nm} (29)** as the corresponding server designations

00000 01101100

$S_{n1} \dots S_{nm}$ (30), utilizing information therefrom the user service and/or information request iq_n (27). Now, again, the user service and/or information response ir_n (36) may also be derived at the client C_n (16) (step 104) therefrom the responses $R_{n1} \dots R_{nm}$ (32) communicated thereto the client C_n (16) (step 104) and/or alternatively and/or additionally therefrom the service and/or information response IR_n (34) communicated thereto the client C_n (16) therefrom the server PS (18) (also step 104).

The user service and/or information response ir_n (36), thus, may be derived therefrom the service and/or information response IR_n (34) communicated therefrom the server PS (18) thereto the client C_n (16) and/or alternatively and/or additionally therefrom the responses $R_{n1} \dots R_{nm}$ (32) communicated thereto the client C_n (16) (step 104).

The user service and/or information response ir_n (36) is communicated thereto the user interface I_n (14) (step 105) and incorporated thereinto the user response UR_n (37).

The user U_n (12) reviews the user response UR_n (37) and/or selects additional services and/or information (step 106). Step 106 will be discussed in more detail later with reference to FIG. 70-2. The process 99 ends at step 107. The process 99 will be described in more detail with reference to ^{FIGS. 1-141} ~~FIGS. 1-104~~ of the drawings.

The service and/or information response IR_n (34) and/or the user service and/or information response ir_n (36) are derived at the server PS (18) and/or the client C_n

(16), respectively, at step 104 in FIG. 70, and shown in more detail in FIGS. 70-1A and 70-1B.

FIG. 70-1A shows the multitasking process 104 of deriving the service and/or
5 information response IR_n (34) and/or the user service and/or information response ir_n
(36), with reference to FIGS. 59 and 63. FIG. 70-1B shows the multitasking process
104 of deriving the service and/or information response IR_n (34) and/or the user
service and/or information response ir_n (36) having other grouping/sorting that may be
used additionally and/or alternatively to that of FIGS. 59 and 63, as shown with
10 reference to FIGS. 60 and 64. The multitasking process 104 will also be described in
more detail with reference to FIGS. 1-104 of the drawings.

The server PS (18) and/or the client C_n (16) parse, process, and/or format the service
and/or information request IQ_n (28) and/or the user service and/or information request
15 iq_n (27) into the current request group QA_{nc} (50), the request groups $QA_{n1} \dots QA_{nz}$
(51), and the optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) (step 104-1), as shown in FIGS.
70-1A and 70-1B.

Information therefrom the current request group QA_{nc} (50) and the optional
20 instructions $VJ_{n1} \dots VJ_{nk}$ (52) may be used to make the requests $Q_{n1} \dots Q_{nm}$ (29),
obtain the responses $R_{n1} \dots R_{nm}$ (32), and incorporate information therefrom into the
service and/or information response IR_n (34) and/or the user service and/or information
response ir_n (36), as shown in FIGS. 70-1A and 70-1B with reference to FIGS. 59, 60,

63, and 64. The current request group QA_{nc} (50) may be any particular one the request groups $QA_{n1} \dots QA_{nz}$ (51), which may be selected by the user U_n (12).

The current request group QA_{nc} (50) has the corresponding queries $QQ_{n1} \dots QQ_{nm}$ (53) and the corresponding server addresses $AQ_{n1} \dots AQ_{nm}$ (54) to open connections with and make the requests $Q_{n1} \dots Q_{nm}$ (29) thereof the servers $S_1 \dots S_z$ (20), in accordance with the designation scheme which designates the certain ones of the servers $S_1 \dots S_z$ (20) to be communicated with corresponding to the requests $Q_{n1} \dots Q_{nm}$ (29) as the corresponding server designations $S_{n1} \dots S_{nm}$ (30), shown for the particular service and/or information request IQ_n (28) and/or the particular user service and/or information request iq_n (27).

The server PS (18) and/or the client C_n (16) open connections with and make the requests $Q_{n1} \dots Q_{nm}$ (29) having the corresponding queries $QQ_{n1} \dots QQ_{nm}$ (53) and the corresponding server addresses $AQ_{n1} \dots AQ_{nm}$ (54) therein the current request group QA_{nc} (50) thereof the servers $S_1 \dots S_z$ (20) (step 104-2) as shown in FIGS. 70-1A and 70-1B, in accordance with the designation scheme which designates the certain ones of the servers $S_1 \dots S_z$ (20) to be communicated with corresponding to the requests $Q_{n1} \dots Q_{nm}$ (29) as the corresponding server designations $S_{n1} \dots S_{nm}$ (30).

The servers $S_1 \dots S_z$ (20) corresponding to the server designations $S_{n1} \dots S_{nm}$ (30), designated in accordance with the designation scheme which designates the certain ones of the servers $S_1 \dots S_z$ (20) to be communicated with corresponding to the requests

$Q_{n1}...Q_{nm}$ (29) as the corresponding server designations $S_{11}...S_{nm}$ (30), respond to the requests $Q_{n1}...Q_{nm}$ (29) with the corresponding responses $R_{n1}...R_{nm}$ (32).

The server **PS (18)** and/or the client **C_n (16)** parse, and/or process, and/or format, and/or group, and/or organize each of the responses $R_{n1}...R_{nm}$ (32) received from the servers $S_1...S_z$ (20) (step 104-3), as shown in FIGS. 70-1A and 70-1B with reference to FIGS. 99-101, corresponding to the server designations $S_{n1}...S_{nm}$ (30) thereinto the corresponding addressable response information groups $RG_{n1}...RG_{nm}$ (57).

The server **PS (18)** and/or the client **C_n (16)** may also make additional optional requests $QP_{n1}...QP_{nm}$ (58) of the optional databases 41 and/or 42 (also step 104-2 of FIGS. 70-1A and 70-1B), which may be optionally resident within the server **PS (18)** and/or the client **C_n (16)**, and which may reply with the corresponding additional optional responses $RA_{n1}...RA_{nm}$ (40). The server **PS (18)** and/or the client **C_n (16)** parse, and/or process, and/or format, and/or group, and/or organize each of the additional optional responses $RA_{n1}...RA_{nm}$ (40) into the corresponding response information groups $RC_{n1}...RC_{nm}$ (59) (also step 104-3 of FIGS. 70-1A and 70-1B).

Now, step 104-3 of FIGS. 70-1A and 70-1B is shown in more detail in FIG. 70-1-1.

As discussed later, and shown in FIGS. 99-101, entity body **RH_{nm} (353)** of the response R_{nm} (32) has optional response individual information groups $LS_{nm1}...LS_{nmr}$ (360).

00000 01201500

Each of the optional response individual information groups **LS_{n11}...LS_{nmr} (360)** and/or portions thereof therefrom the entity bodies **RH_{n1}...RH_{nm} (353)** of the responses **R_{n1}...R_{nm} (32)** may be optionally compared one with the other, and
5 duplicate ones of the optional response individual information groups **LS_{n11}...LS_{nmr} (360)** may be optionally discarded (step **104-3-1**), as shown in FIG. 70-1-1.

The remaining optional response individual information groups **LS_{n11}...LS_{nmr} (360)** are parsed, and/or processed, and/or formatted, and/or organized, and/or grouped
10 thereinto corresponding ones of the addressable individual information groups **LG_{n11}...LG_{nmr} (80)** as the addressable individual information groups **LG_{n11}...LG_{nmr} (80)** are incorporated thereinto the addressable response information group s **RG_{n1}...RG_{nm} (57)** therefrom the responses **R_{n1}...R_{nm} (32)** (step **104-3-2**), as shown in FIG. 70-1-1.

15 The addressable individual information groups **LG_{n11}...LG_{nmr} (80)** are typically parsed, and/or processed, and/or formatted for consistency of presentation and/or appearance one with the other, as the addressable individual information groups **LG_{n11}...LG_{nmr} (80)** are incorporated thereinto the addressable response information
20 group s **RG_{n1}...RG_{nm} (57)** therefrom the responses **R_{n1}...R_{nm} (32)**.

The server **PS (18)** and/or the client **C_n (16)** may formulate information from the current request group **QA_{nc} (50)** having the corresponding queries **QQ_{n1}...QQ_{nm} (53)**

and the corresponding server addresses $AQ_{n1} \dots AQ_{nm}$ (54) into the corresponding request pointer/address group QZ_n (60) having the pointers/addresses $PG_{n1} \dots PG_{nz}$ (61) associated therewith (step 104-4 of FIG. 70-1A with reference to FIGS. 59, 63, and 91). Alternatively and/or additionally, the server PS (18) and/or the client C_n (16) may formulate information from the current request group QA_{nc} (50) having the corresponding queries $QQ_{n1} \dots QQ_{nm}$ (53) and the corresponding server addresses $AQ_{n1} \dots AQ_{nm}$ (54) into a corresponding request pointer/address group QY_n (68) having the pointers/addresses $PF_{n11} \dots PF_{nmr}$ (69) associated therewith (step 104-4 of FIG. 70-1B with reference to FIGS. 60 and 64).

104-4

The server PS (18) and/or the client C_n (16) may formulate the addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62) (step 104-5 of FIG. 70-1A with reference to FIGS. 59, 63, 91, 96, and typical ones of the addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62) in FIGS. 92 and 93), depending upon the grouping and/or sorting criteria used. Each of the pointers/addresses $PG_{n1} \dots PG_{nz}$ (61) may be directed to point/address the corresponding addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62) associated therewith, which aid in obtaining information and/or services therefrom certain ones of addressable response information groups $RG_{n1} \dots RG_{nm}$ (57) to be incorporated therein addressable query information groups $GI_{n1} \dots GI_{nz}$ (63).

Each of the addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62) has the pointers/addresses $PP_{n11} \dots PP_{nmr}$ (64) directed to address/point information therein the

addressable response information groups $\mathbf{RG}_{n1}\dots\mathbf{RG}_{nm}$ (57) based upon the grouping and/or sorting criteria.

The grouping and/or sorting criteria may be incorporated thereinto the optional instructions $\mathbf{VJ}_{n1}\dots\mathbf{VJ}_{nk}$ (52), which may be entered thereinto the user interface \mathbf{I}_n (14) 5 therethrough the user input \mathbf{UI}_n (25) by the user \mathbf{U}_n (12). Grouping and/or sorting criteria may additionally and/or alternatively optionally resident within the server \mathbf{PS} (18) and/or the client \mathbf{C}_n (16).

10 The grouping and/or sorting criteria gives the user \mathbf{U}_n (12) the ability to formulate the query information groups $\mathbf{GI}_{n1}\dots\mathbf{GI}_{nz}$ (63) and the way in which information and/or services from the addressable response information groups $\mathbf{RG}_{n1}\dots\mathbf{RG}_{nm}$ (57) is presented to the user \mathbf{U}_n (12) therethrough the user interface \mathbf{I}_n (14).

15 Information and/or services within each of the addressable response information groups $\mathbf{RG}_{n1}\dots\mathbf{RG}_{nm}$ (57) is addressed therewith the pointers/addresses $\mathbf{PP}_{n11}\dots\mathbf{PP}_{nmr}$ (64) therefrom the query pointer/address groups $\mathbf{QG}_{n1}\dots\mathbf{QG}_{nz}$ (62), and information and/or services therefrom the addressable response information groups $\mathbf{RG}_{n1}\dots\mathbf{RG}_{nm}$ (57) is 20 incorporated thereinto the addressable query information groups $\mathbf{GI}_{n1}\dots\mathbf{GI}_{nz}$ (63) corresponding to the pointers/addresses $\mathbf{PP}_{n11}\dots\mathbf{PP}_{nmr}$ (64) (step 104-6 of FIG. 70-1A), which are formulated by the addressable query pointer/address groups $\mathbf{QG}_{n1}\dots\mathbf{QG}_{nz}$ (62), in accordance with the grouping and/or sorting criteria, as shown in FIG. 70-1A with reference to FIGS. 59, 63, 66A, 66B, 66C, 67 – 69, 91, 96, typical

104-6 of FIG. 70-1A

ones of the addressable query pointer/address groups **QG_{n1}...QG_{nz} (62)** in FIGS. 92 and 93, and a typical one of the addressable query information groups **GI_{n1}...GI_{nz} (63)**, designated as the addressable query information group **GI_{nz} (63)**, in FIG. 103.

5 Alternatively and/or additionally, each of the pointers/addresses **PF_{n11}...PF_{nmr} (69)** may directed to point/address the corresponding addressable response information groups **RG_{n1}...RG_{nm} (57)**, and aid in obtaining information and/or services therefrom the corresponding addressable response information groups **RG_{n1}...RG_{nm} (57)** to be incorporated thereinto the addressable query information groups **GI_{n1}...GI_{nz} (63)** (step
 10 **104-6**) as shown FIG. 70-1B with reference to FIGS. 60, 64, 66A, 66B, 66C, 67 – 69, and another typical one of the addressable query information groups **GI_{n1}...GI_{nz} (63)**, designated as the addressable query information group **GI_{nz} (63)**, in FIG. 104.

Now, step **104-6** of FIG. 70-1A is shown in more detail in FIG. 70-1-2A with reference
 15 to FIGS. 59, 63, 66A, 66B, 66C, 67 – 69, 91, 96, typical ones of the addressable query pointer/address groups **QG_{n1}...QG_{nz} (62)** in FIGS. 92 and 93, and a typical one of the addressable query information groups **GI_{n1}...GI_{nz} (63)**, designated as the addressable query information group **GI_{nz} (63)**, in FIG. 103. Step **104-6** of FIG. 70-1B is shown in more detail in FIG. 70-1-2B with reference to FIGS. 60, 64, 66A, 66B, 66C, 67 – 69,
 20 and another typical one of the addressable query information groups **GI_{n1}...GI_{nz} (63)**, designated as the addressable query information group **GI_{nz} (63)**, in FIG. 104.

03020 00000000

The optional addressable individual information groups **LG_{n11}...LG_{nmr} (80)** therein each of the addressable response information groups **RG_{n1}...RG_{nm} (57)** may be addressed therewith the pointers/addresses **PP_{n11}...PP_{nmr} (64)** (step **104-6-1**) as shown FIG. 70-1-2A with reference to FIGS. 59 and 63 and FIG. 70-1A.

5

The optional addressable individual information groups **LG_{n11}...LG_{nmr} (80)** therein each of the addressable response information groups **RG_{n1}...RG_{nm} (57)** may alternatively and/or additionally be addressed therewith the pointers/addresses **PF_{n11}...PF_{nmr} (69)** (step **104-6-1**) as shown FIG. 70-1-2B with reference to FIGS. 60 and 64 and FIG. 70-1B.

10

The addressed optional addressable individual information groups **LG_{n11}...LG_{nmr} (80)** an/or portions thereof may be optionally labelled with labels and/or identifiers and incorporated therinto the labelled individual information groups **LL_{nz1}...LL_{nzu} (86)** (step **104-6-2**), as shown in FIGS. 70-1-2A and 70-1-2B.

15

The labelled individual information groups **LL_{nz1}...LL_{nzu} (86)** may be incorporated therinto certain ones of the addressable query information groups **GI_{n1}...GI_{nz} (63)**, depending upon the grouping and/or sorting criteria (step **104-6-3**), as shown in FIGS. 70-1-2A and 70-1-2B.

20

The addressed optional addressable individual information groups **LG_{n11}...LG_{nmr} (80)** an/or portions thereof are typically appended with the labels and/or identifiers, thus

creating the labelled individual information groups $LL_{nz1} \dots LL_{nzu}$ (86), as each of the labelled individual information groups $LL_{nz1} \dots LL_{nzu}$ (86) are incorporated thereinto the certain ones of the addressable query information groups $GI_{n1} \dots GI_{nz}$ (63). The steps 104-6-2 and 104-6-3 are thus typically consolidated into a single step.

5

The addressable query information groups $GI_{n1} \dots GI_{nz}$ (63) may then be incorporated thereinto the service and/or information response IR_n (34) (step 104-7), as shown in FIGS. 70-1A and 70-1B with reference to FIG. 61, and/or the user service and/or information response ir_n (36) (also step 104-7), as also shown in FIGS. 70-1A and 70-1B but with reference to FIG. 65.

10

The user U_n (12) reviews the user response UR_n (37) the user interface I_n (14) and/or selects additional services and/or information at step 106 in FIG. 70, and shown in more detail in FIG. 70-2. The step 106 will also be described in more detail with

reference to ^{FIGS. 1-141} ~~FIGS. 1-104~~ of the drawings.

15

The user U_n (12) selects additional services and/or information therethrough the user interface I_n (14) (step 106-1) or exits to the end of the process 99 at step 107. If the user U_n (12) selects additional services and/or information therethrough the user interface I_n (14) (step 106-1), the user U_n (12) may optionally enter one or more orders thereinto an order form and/or order forms thereat and therethrough the user interface I_n (14) (step 106-2). The order and/or orders may be, for example, for purchases, and/or instructions, and/or payment, and/or other information and/or services to be directed to

20

and/or requested thereof third parties, and/or combinations thereof, of the optional servers **SO₁...SO_p (22)**, and/or the servers **S₁...S_z (20)**, and/or other ones of the clients **C₁...C_n (16)** therethrough the server **PS (18)** and/or the client **C_n (16)**. The order and/or orders may, thus, be placed therethrough and thereby the server **PS (18)** and/or the client **C_n (16)**, eliminating the need for the user **U_n (12)** to place separate ones of the orders with the third parties, the optional servers **SO₁...SO_p (22)**, and/or the servers **S₁...S_z (20)** separately and/or individually.

The server **PS (18)** and/or the client **C_n (16)** process the orders and/or communicate the orders to the third parties, the optional servers **SO₁...SO_p (22)**, and/or the servers **S₁...S_z (20)**, and/or other ones of the clients **C₁...C_n (16)** (step **106-3**). The server **PS (18)** and/or the client **C_n (16)** confirm the order (step **106-4**). The user **U_n (12)** may select additional services and/or information therethrough the user interface **I_n (14)** (step **106-1**) or exit to the end of the process **99** at step **107**.

If the user **U_n (12)** selects additional services and/or information therethrough the user interface **I_n (14)** (step **106-1**), the user **U_n (12)** may alternatively and/or additionally optionally enter information and/or service requests of the optional servers **SO₁...SO_p (22)**, and/or the servers **S₁...S_z (20)** therethrough the user interface **I_n (14)** (step **106-5**) and/or exit to the end of the process **99** at step **107**.

If the user **U_n (12)** selects additional services and/or information therethrough the user interface **I_n (14)** (step **106-1**), the user **U_n (12)** may alternatively and/or additionally

optionally enter additional requests as the user input UI_n (25) thereat and therethrough the user interface I_n (14) (step 106-6) and enter the process 99 at step 102.

V. ADDITIONAL DETAILS

5 A. USER INPUT

The user input UI_n (25), which the user U_n (12) makes therethrough the user interface I_n (14), may have one or a plurality of the same and/or different ones of the queries $QQ_{n1}...QQ_{nm}$ (53) to be made by the server PS (18) and/or the client C_n (16) of the same and/or different ones of the servers $S_1...S_z$ (20), in accordance with the
10 designation scheme which designates the servers $S_1...S_z$ (20) to be communicated with corresponding to the requests $Q_{n1}...Q_{nm}$ (29) as the corresponding server designations $S_{n1}...S_{nm}$ (30) at the corresponding server addresses $AQ_{n1}...AQ_{nm}$ (54).

The server PS (18) and/or the client C_n (16) parse, process, format, sort, group, and/or
15 organize each of the responses $R_{n1}...R_{nm}$ (32) to the corresponding requests $Q_{n1}...Q_{nm}$ (29), received therefrom the servers $S_1...S_z$ (20) designated by the server designations $S_{n1}...S_{nm}$ (30), and/or each of the additional optional responses $RA_{n1}...RA_{nm}$ (40) therefrom the server PS (18) and/or the client C_n (16). The parsed, processed, formatted, sorted, grouped, and/or organized results therefrom the server PS
20 (18) and/or the client C_n (16) are communicated thereto the user U_n (12) therethrough the user interface I_n (14) as the user response UR_n (37), which the user U_n (12) may

review, interact therewith, and/or select additional services and/or information therefrom.

The user U_n (12) enters the user input UI_n (25) having one or more of the same and/or
5 different user requests $qu_{n1}...qu_{nu}$ (26) thereinto user interface I_n (14), as shown in
FIG. 3. The user requests $qu_{n1}...qu_{nu}$ (26) are communicated from the user interface
 I_n (14) to the client C_n (16) within the user service and/or information request iq_n (27),
having the user requests $qu_{n1}...qu_{nu}$ (26) and other optional information.

10 The user U_n (12) may enter the user input UI_n (25) having one or more of the same
and/or different user requests $qu_{n1}...qu_{nu}$ (26) thereinto the service and/or information
entry request form IE_n (38) at the user interface I_n (14), or thereinto the user interface
 I_n (14) therethrough other suitable means.

15 The user interfaces $I_1...I_n$ (14) have suitable input means and/or suitable presentation
and/or display means, which allow the corresponding users $U_1...U_n$ (12) to
communicate therewith the corresponding clients $C_1...C_n$ (16). FIGS. 5A, 5B, and 6-
10 show typical ones of the service and/or information entry request forms $IE_1...IE_n$
(38) at the user interfaces $I_1...I_n$ (14), as graphical user interfaces (GUI's), which the
20 users $U_1...U_n$ (12) may enter the corresponding user inputs $UI_1...UI_n$ (25) thereinto.
FIGS. 71 and 72 are schematic representations of the service and/or information entry
request form IE_n (38) showing fields, links, and elements of the service and/or
information entry request form IE_n (38).

The user **U_n (12)** may enter the user input **UI_n (25)** thereinto the service and/or information entry request form **IE_n (38)** at the user interface **I_n (14)**, as shown schematically in FIG. 71. The user input **UI_n (25)** may be entered as user input values
 5 thereinto fields or alternate request links of the service and/or information entry request form **IE_n (38)**.

The user **U_n (12)** may enter the user input **UI_n (25)** as one or more of the same and/or different user requests **qu_{n1}...qu_{nu} (26)**, which may have the query values
 10 **QV_{n1}...QV_{nu} (200)**, server name values **AV_{n1}...AV_{nu} (201)**, optional instruction values **VV_{n1}...VV_{nv} (202)**, and/or alternate request links **QL_{n1}...QL_{na} (203)**, and/or server request links **UL_{n1}...UL_{ns} (204)**, and/or the additional request links **SL_{n1}...SL_{nw} (71)** thereinto the service and/or information entry request form **IE_n (38)**.

15 The user input **UI_n (25)**, thus, has one or more of the same and/or different user requests **qu_{n1}...qu_{nu} (26)**, which may be entered as the query values **QV_{n1}...QV_{nu} (200)** of the same and/or different servers **S₁...S_z (20)**, designated in accordance with the designation scheme corresponding to the corresponding certain ones of the server designations **S₁₁...S_{nm} (30)** having the corresponding server name values **AV_{n1}...AV_{nu} (201)**, the optional instruction values **VV_{n1}...VV_{nv} (202)**, and/or the alternate request
 20 links **QL_{n1}...QL_{na} (203)**, and/or the server request links **UL_{n1}...UL_{ns} (204)**, and/or the additional request links **SL_{n1}...SL_{nw} (71)** thereinto the service and/or information entry request form **IE_n (38)**.

Each of the different user requests $qu_{n1}\dots qu_{nu}$ (26) may be the same and/or different one from the other. Each of the query values $QV_{n1}\dots QV_{nu}$ (200) may be the same and/or different one from the other. The query values $QV_{n1}\dots QV_{nu}$ (200) may be entered for the same and/or different ones of the servers $S_1\dots S_z$ (20). The optional instruction values $VV_{n1}\dots VV_{nv}$ (202) may be the same and/or different one from the other.

The user U_n (12) may also enter the user input UI_n (25) and request services and/or information therethrough one of the alternate request links $QL_{n1}\dots QL_{na}$ (203), or one of the server request links $UL_{n1}\dots UL_{ns}$ (204), or one of the additional request links $SL_{n1}\dots SL_{nw}$ (71) thereat the user interface I_n (14).

B. USER INTERFACE DETAILS

The client-server multitasking system 10 of the present invention may have any suitable user interface I_n (14) acceptable to and/or preferred by the user U_n (12), and acceptable to the client C_n (16). The user interface I_n (14) may be, for example, a graphical user interface, visual, aural, and/or tactile user interface, and/or combination thereof, or other suitable interface. The user interface I_n (14) may be integral with the client C_n (16) or separate therefrom.

00000 000000

The user interface I_n (14) may be hardware based, and/or computer based, and/or process based, and/or a combination thereof, and may be a graphical user interface, such as, for example, a browser and/or combinations thereof, varieties of which are commonly used on the internet.

5

The service and/or information entry request form IE_n (38) may be optionally available to the user U_n (12) at the user interface I_n (14), or the user U_n (12) may optionally request the service and/or information entry request form IE_n (38) therethrough the user interface I_n (14).

10

Now, as shown in FIGS. 5A, 5B, and 6-10 and schematically in FIGS. 71 and 72, the service and/or information entry request form IE_n (38) at the user interface I_n (14) has user client request fields $QD_{n1}...QD_{nu}$ (206) accessible to the user U_n (12) and hidden client request elements $HU_{n1}...HU_{nh}$ (207) hidden from the user U_n (12). The user client request fields $QD_{n1}...QD_{nu}$ (206) accessible to the user U_n (12) has server requests portion 208, optional instructions portion 209, an optional execute request element 210, and alternate requests portion 212. The hidden client request elements $HU_{n1}...HU_{nh}$ (207) hidden from the user U_n (12) have optional server requests portion 214, optional instructions portion 216, and optional information element HE_n (218).

20

The server requests portion 208 of the user client request fields $QD_{n1}...QD_{nu}$ (206) accessible to the user U_n (12) has server query fields $QF_{n1}...QF_{nu}$ (220), which the

user **U_n** (12) may enter corresponding server query values **QV_{n1...n_u}** (200) thereinto, as a portion of the user input **UI_n** (25).

The user **U_n** (12) may also optionally enter the server name values **AV_{n1...n_u}** (201) thereinto server name fields **AF_{n1...n_u}** (224). The user **U_n** (12) may enter the server name values **AV_{n1...n_u}** (201) as another portion of the user input **UI_n** (25).

The user **U_n** (12) may also optionally enter the optional instruction values **VV_{n1...n_v}** (202) thereinto optional instruction fields **VF_{n1...n_v}** (228) of the optional instructions portion 209 of the user client request fields **QD_{n1...n_u}** (206) accessible to the user **U_n** (12). The user **U_n** (12) may enter the optional instruction values **VV_{n1...n_v}** (202) as yet another portion of the user input **UI_n** (25).

Upon the user **U_n** (12) entering the user input **UI_n** (25) of the server query values **QV_{n1...n_u}** (200) and/or the server name values **AV_{n1...n_u}** (201) and/or the optional instruction values **VV_{n1...n_v}** (202) thereinto the service and/or information entry request form **IE_n** (38) at the user interface **I_n** (14), the completed service and/or information request form **IF_n** (230) results, shown schematically in FIGS. 73 and 74.

The user **U_n** (12) may instruct the user interface **I_n** (14) to communicate the user service and/or information requests **iq_n** (27), shown in FIG. 74, having the server query values **QV_{n1...n_u}** (200) and/or the server name values **AV_{n1...n_u}** (201) and/or the optional instruction values **VV_{n1...n_v}** (202), from the already completed service

and/or information request form **IF_n (230)** at the user interface **I_n (14)** thereto the client
C_n (16) by entering the optional execute request element **210**, using a point and click
device, such as a mouse, light pen, tactile monitor, by entering a carriage return,
therethrough other user interface controls, or therethrough other suitable means. FIG.
5 75 shows a schematic representation of the user service and/or information request **iq_n**
(27).

The user **U_n (12)** may alternatively enter the alternate request links **QL_{n1}...QL_{na} (203)**
or the server request links **UL_{n1}...UL_{ns} (204)** or the additional request links
10 **SL_{n1}...SL_{nw} (71)** thereinto the service and/or information entry request form **IE_n (38)**
therewith a point and click device, such as a mouse, a light pen, tactile monitor, or
therewith alternative and/or other user interface controls or other suitable means, and
instruct the user interface **I_n (14)** to communicate the user service and/or information
request **iq_n (27)**, having information associated with the alternate request links
15 **QL_{n1}...QL_{na} (203)** or the server request links **UL_{n1}...UL_{ns} (204)** or the additional
request links **SL_{n1}...SL_{nw} (71)**, thereto the client **C_n (16)**.

The server name fields **AF_{n1}...AF_{nu} (224)** and the optional instruction fields
VF_{n1}...VF_{nv} (228) of the service and/or information entry request form **IE_n (38)** may
20 optionally have the server name values **AV_{n1}...AV_{nu} (201)** and/or the optional
instruction values **VV_{n1}...VV_{nv} (202)** entered thereinto, respectively, as changeable
and/or fixed pre-set or preselected values, drop down menu selections, and/or as blank
fields, or a combination thereof. The preselected values may be replaced with values of

the user's U_n (12) choice or may remain fixed, depending upon choices offered therein
 the service and/or information entry request form IE_n (38). The drop down menu
 selections may be changed to ones of a number of preselected choices offered in the
 drop down menu selections, which the user U_n (12) may optionally scroll through to
 5 determine which choice to make. Blank ones of the server name fields $AF_{n1}...AF_{nu}$
 (224) and/or blank ones of the optional instruction fields $VF_{n1}...VF_{nv}$ (228) allow the
 user U_n (12) to optionally enter the server name values $AV_{n1}...AV_{nu}$ (201) and/or the
 optional instruction values $VV_{n1}...VV_{nv}$ (202), respectively, therein, accordingly.

10 The server query fields $QF_{n1}...QF_{nu}$ (220), which the user U_n (12) enters the
 corresponding server query values $QV_{n1}...QV_{nu}$ (200) thereinto, therethrough the user
 input UI_n (25), may also have changeable and/or fixed preselected values, drop down
 menu selections, and/or blank fields, or a combination thereof. However, the server
 query fields $QF_{n1}...QF_{nu}$ (220) may generally be presented to the user U_n (12) as
 15 blank fields, at least for the first user input UI_n (25).

The alternate requests portion 212 of the user client request fields $QD_{n1}...QD_{nu}$ (206)
 accessible to the user U_n (12) has the alternate request links $QL_{n1}...QL_{na}$ (203), the
 server request links $UL_{n1}...UL_{ns}$ (204), and the additional request links $SL_{n1}...SL_{nw}$
 20 (71). The user U_n (12) may alternatively request services and/or information
 therethrough one of the alternate request links $QL_{n1}...QL_{na}$ (203), or one of the server
 request links $UL_{n1}...UL_{ns}$ (204), or one of the additional request links $SL_{n1}...SL_{nw}$
 (71).

The alternate request links **QL_{n1}...QL_{na} (203)** allow the user **U_n (12)** to make the service and/or information request **IQ₁...IQ_n (28)** with preconfigured optional default selections already placed therein the service and/or information request **IQ₁...IQ_n (28)**

5 for the user **U_n (12)**. The server request links **UL_{n1}...UL_{nw} (204)** may be advertisements, advertising links, and/or links to ones of the optional servers **SO₁...SO_p (22)**. The user **U_n (12)** may, for example, make requests for additional services and/or information therefrom ones of the optional servers **SO₁...SO_p (22)**, using the server request links **UL_{n1}...UL_{nw} (204)**. The additional request links

10 **SL_{n1}...SL_{nw} (71)** allow the user **U_n (12)** to make additional optional selections, based upon information and/or services previously requested by the user **U_n (12)**.

The optional server requests portion **214** of the hidden client request elements **HU_{n1}...HU_{nh} (207)** hidden from the user **U_n (12)** has hidden query elements

15 **Qh_{n1}...Qh_{nh} (236)** and corresponding associated hidden server name elements **Ah_{n1}...Ah_{nh} (238)**. The optional instructions portion **216** of the hidden client request elements **HU_{n1}...HU_{nh} (207)** hidden from the user **U_n (12)** may have optional hidden instruction elements **Vh_{n1}...Vh_{ni} (240)**. The hidden client request elements **HU_{n1}...HU_{nh} (207)** hidden from the user **U_n (12)** may also have the hidden optional

20 information element **HE_n (218)**, which may have optional information and/or statistics.

The user **U_n (12)** may, thus, request the services and/or information by completing entry of the server requests portion **208** and the optional instructions portion **209**

therewith the optional execute request element **210**, after entering the server query values **QV_{n1}...QV_{nu} (200)** and/or the server name values **AV_{n1}...AV_{nu} (201)** and/or the optional instruction values **VV_{n1}...VV_{nv} (202)**, or by alternatively requesting the services and/or information therethrough one of the alternate request links **QL_{n1}...QL_{na} (203)**, or one of the server request links **UL_{n1}...UL_{ns} (204)**, or one of the additional request links **SL_{n1}...SL_{nw} (71)**.

Upon completion of the user input **U_n (25)**, the completed service and/or information request form **IF_n (230)**, as shown in FIGS. 73 and 74, has user client request elements **QM_{n1}...QM_{nu} (246)** accessible to the user **U_n (12)** having server request elements **242** and optional instruction elements **VE_{n1}...VE_{nv} (244)**; and/or alternate request elements **248** of the user client request elements **QM_{n1}...QM_{nu} (246)** accessible to the user **U_n (12)**; and/or optional server request elements **250**, optional instruction elements **252**, and/or hidden client request elements **HP_{n1}...HP_{nh} (256)** hidden from the user **U_n (12)**.

The user **U_n (12)** may instruct the user interface **I_n (14)** to communicate the user service and/or information request **iq_n (27)** derived from the service and/or information request form **IF_n (230)** to the client **C_n (16)**, as shown in FIG. 75, therewith the optional execute request element **210** or therewith the other suitable means; or the user **U_n (12)** may alternatively communicate the user service and/or information request **iq_n (27)** by entering the alternate request links **QL_{n1}...QL_{na} (203)** or the server request links **UL_{n1}...UL_{ns} (204)** or the additional request links **SL_{n1}...SL_{nw} (71)** thereinto the

service and/or information entry request form **IE_n (38)** or thereinto the completed
 service and/or information request form **IF_n (230)** therewith a point and click device,
 such as a mouse, a light pen, tactile monitor, or therewith alternative and/or other user
 interface controls or other suitable means, and instruct the user interface **I_n (14)** to
 5 communicate the user service and/or information request **iq_n (27)**, having information
 associated with the alternate request links **QL_{n1}...QL_{na} (203)** or the server request
 links **UL_{n1}...UL_{ns} (204)** or the additional request links **SL_{n1}...SL_{nw} (71)**, thereto the
 client **C_n (16)**.

10 FIGS. 73 and 74 are schematic representations of the completed service and/or
 information entry request form **IF_n (230)** showing typical elements, values, field
 names, name-value pairs, optional instructions, and alternate requests, resulting from
 the user **U_n (12)** entering the user input **UI_n (25)** of the server query values
QV_{n1}...QV_{nu} (200) and/or the server name values **AV_{n1}...AV_{nu} (201)** and/or the
 15 optional instruction values **VV_{n1}...VV_{nv} (202)** thereinto the service and/or information
 entry request form **IE_n (38)** at the user interface **I_n (14)**.

Now, the completed service and/or information entry request form **IF_n (230)** has the
 user client request elements **QM_{n1}...QM_{nu} (246)** accessible to the user **U_n (12)** having
 20 the server request elements **242**, which has query elements **QE_{n1}...QE_{nu} (258)** and
 corresponding associated server name elements **AE_{n1}...AE_{nu} (260)**.

Each of the query elements $QE_{n1} \dots QE_{nu}$ (258) have query field names $QN_{n1} \dots QN_{nu}$ (262) of the associated corresponding server query fields $QF_{n1} \dots QF_{nu}$ (220) and the corresponding server query values $QV_{n1} \dots QV_{nu}$ (200) associated therewith, which the requests $Q_{11} \dots Q_{nm}$ (29) may be derived therefrom.

5

Each of the server name elements $AE_{n1} \dots AE_{nu}$ (260) have server field names $AN_{n1} \dots AN_{nm}$ (264) of the associated corresponding server name fields $AF_{n1} \dots AF_{nu}$ (224) and the corresponding server name values $AV_{n1} \dots AV_{nu}$ (201) associated therewith, which server addresses $A_{n1} \dots A_{nu}$ (265) may be derived therefrom.

10

The user client request elements $QM_{n1} \dots QM_{nu}$ (246) accessible to the user U_n (12) also have the optional instruction elements $VE_{n1} \dots VE_{nv}$ (244) having optional instruction field names $VN_{n1} \dots VN_{nv}$ (266) of the associated corresponding optional instruction fields $VF_{n1} \dots VF_{nv}$ (228) and the corresponding optional instruction values $VV_{n1} \dots VV_{nv}$ (202) associated therewith.

15

The user client request elements $QM_{n1} \dots QM_{nu}$ (246) accessible to the user U_n (12) also have the alternate request elements 246 having the alternate request links $QL_{n1} \dots QL_{na}$ (203), or the server request links $UL_{n1} \dots UL_{ns}$ (204), or the additional request links $SL_{n1} \dots SL_{nw}$ (71).

20

The hidden client request elements $HP_{n1} \dots HP_{nh}$ (256) hidden from the user U_n (12) have the hidden query elements $Qh_{n1} \dots Qh_{nh}$ (236), which may have hidden query

field names **Qn_{n1}...Qn_{nh}** (268) and corresponding hidden query values **Qv_{n1}...Qv_{nh}** (270) associated therewith. The hidden server name elements **Ah_{n1}...Ah_{nh}** (238) may have hidden server field names **An_{n1}...An_{nh}** (272) and corresponding server hidden request name values **Av_{n1}...Av_{nh}** (274) associated therewith.

5

The hidden client request elements **HP_{n1}...HP_{nh}** (256) hidden from the user **U_n** (12) may also have the optional hidden instruction elements **Vh_{n1}...Vh_{ni}** (240), which may have optional hidden instruction field names **Vn_{n1}...Vn_{ni}** (275) and corresponding optional hidden instruction values **Vv_{n1}...Vv_{ni}** (276) associated therewith. The hidden client request elements **HP_{n1}...HP_{nh}** (256) hidden from the user **U_n** (12) may also have the hidden optional information element **HE_n** (218), which may have optional hidden information element field name **Jn_n** (277) and optional hidden information element value **Jv_n** (278) associated therewith.

10

15 Now again, the user interfaces **I₁...I_n** (14) may each be different, one from the other, or the same, and may change characteristics over time. Each of the user interfaces **I₁...I_n** (14) may change characteristics as a function of time, information, and/or instructions, and/or other means, which may be derived by the users **U₁...U_n** (12) and/or the clients **C₁...C_n** (16) and/or the servers **S₁...S_z** (20), and/or the server **PS** (18), and/or the optional servers **SO₁...SO_p** (22), and/or derived within the user interfaces **I₁...I_n** (14).
 20 The user interface **I₁...I_n** (14) may change state.

US 6,408,831 B2

The user interface **I**_{1...n} (14) may also change as a function of optional timers and/or timed instructions associated therewith the user interfaces **I**_{1...n} (14), and/or associated therewith the clients **C**_{1...n} (16) and/or associated therewith the servers **S**_{1...S_z} (20), and/or associated therewith the server **PS** (18), and/or associated therewith the optional servers **SO**_{1...SO_p} (22), and/or instructions from the user **U**_{1...U_n} (12). Changes in the user interface **I**_n (14) may appear continuous to the user **U**_n (12), spaced in time, staccato, or static depending upon the optional timers and/or the timed instructions.

Other conditions may change the user interface **I**_{1...n} (14), as well.

10 The user interfaces **I**_{1...n} (14) may be updated continuously, intermittently, manually, randomly, semi-automatically, automatically, repetitively, non-repetitively, singly, plurally, multiplexed, and/or a combination thereof or other suitable manner.

The user interfaces **I**_{1...n} (14) may be visual, such as graphical user interfaces, aural, and/or tactile, a combination thereof, and/or other suitable means. The user interfaces 15 **I**_{1...n} (14) may be integral with the clients **C**_{1...n} (16) or separate therefrom.

The user interfaces **I**_{1...n} (14) may change in response to the user inputs **UI**_{1...UI_n} (25), the service and/or information entry request forms **IE**_{1...IE_n} (38) at the user 20 interfaces **I**_{1...n} (14), the completed service and/or information request forms **IF**_n (230), the user service and/or information requests **iq**_{1...iq_n} (27), the optional execute request elements **210**, accessing the alternate request links **QL**_{11...QL_{1a}} (203), accessing the server request links **UL**_{11...UL_{1s}} (204), accessing the additional request

links $SL_{11}...SL_{1w}$ (71), the service and/or information responses $IR_1...IR_n$ (34), the service and/or information response forms $IS_1...IS_n$ (39). Other conditions may change the user interface $I_1...I_n$ (14), as well.

- 5 Portions of the user responses $UR_1...UR_n$ (37) may be mapped into and/or onto different portions of the user interfaces $I_1...I_n$ (14) to facilitate interaction with and the needs of each of the users $U_1...U_n$ (12). Such mappings may be optionally customized by the users $U_1...U_n$ (12).

10 **C. SERVICE AND/OR INFORMATION REQUEST DETAILS**

Each of the users $U_1...U_n$ (12) communicate the corresponding user service and/or information requests $iq_1...iq_n$ (27) therethrough the corresponding user interfaces $I_1...I_n$ (14) to the corresponding clients $C_1...C_n$ (16), which optionally format the corresponding user service and/or information requests $iq_1...iq_n$ (27) into the
15 corresponding service and/or information requests $IQ_1...IQ_n$ (28), as required.

Now, again, the user U_n (12) may instruct the user interface I_n (14) to communicate the user service and/or information requests iq_n (27), having the server query values $QV_{n1}...QV_{nu}$ (200) and/or the server name values $AV_{n1}...AV_{nu}$ (201) and/or the
20 optional instruction values $VV_{n1}...VV_{nv}$ (202), from the already completed service and/or information request form IF_n (230) at the user interface I_n (14) thereto the client C_n (16) by entering the optional execute request element 210, using a point and click

00000 00000000

device, such as a mouse, light pen, tactile monitor, by entering a carriage return, therethrough other user interface controls, or therethrough other suitable means. FIG. 75 shows a schematic representation of the user service and/or information request iq_n (27).

5

The user U_n (12) may alternatively enter the alternate request links $QL_{n1}...QL_{na}$ (203) or the server request links $UL_{n1}...UL_{ns}$ (204) or the additional request links $SL_{n1}...SL_{nw}$ (71) thereinto the service and/or information entry request form IE_n (38) therewith a point and click device, such as a mouse, a light pen, tactile monitor, or 10 therewith alternative and/or other user interface controls or other suitable means, and instruct the user interface I_n (14) to communicate the user service and/or information request iq_n (27), having information associated with the alternate request links $QL_{n1}...QL_{na}$ (203) or the server request links $UL_{n1}...UL_{ns}$ (204) or the additional request links $SL_{n1}...SL_{nw}$ (71), thereto the client C_n (16).

15

The user service and/or information request iq_n (27) is communicated from the user interface I_n (14) to the client C_n (16), which acts upon the user service and/or information request iq_n (27) to derive the service and/or information request IQ_n (28) therefrom. FIGS. 75-80 are schematic representations of the service and/or information 20 request IQ_n (28) and/or the user service and/or information request iq_n (27).

The service and/or information request IQ_n (28) has information and/or elements, which may be used by the server PS (18) to make the requests $Q_{n1}...Q_{nm}$ (29) of the

servers $S_1 \dots S_z$ (20), in accordance with the designation scheme which designates the
 ones of the servers $S_1 \dots S_z$ (20) to be communicated with corresponding to the requests
 $Q_{11} \dots Q_{nm}$ (29) as the corresponding server designations $S_{11} \dots S_{nm}$ (30). The client
 C_n (16) may additionally and/or alternatively make the requests $Q_{n1} \dots Q_{nm}$ (29) of the
 5 servers $S_1 \dots S_z$ (20), using information and/or elements within the user service and/or
 information request iq_n (27).

The service and/or information request IQ_n (28) has user client requests $QC_{n1} \dots QC_{nu}$
 (280) accessible to the user U_n (12) and hidden client requests $HC_{n1} \dots HC_{nh}$ (281)
 10 hidden from the user U_n (12).

The user client requests $QC_{n1} \dots QC_{nu}$ (280) accessible to the user U_n (12) and/or the
 hidden client requests $HC_{n1} \dots HC_{nh}$ (281) hidden from the user U_n (12) have address
 and/or location information and/or instructions, and/or other information corresponding
 15 to information and/or services to be requested of the servers $S_1 \dots S_z$ (20), and/or
 information and/or instructions to be utilized by the server PS (18) and/or ones of the
 clients $C_1 \dots C_n$ (16).

The user client requests $QC_{n1} \dots QC_{nu}$ (280) accessible to the user U_n (12) have server
 20 requests portion SQ_n (282), optional instructions portion V_n (283), and alternate
 request portion AL_n (284).

The hidden client requests $HC_{n1} \dots HC_{nh}$ (281) hidden from the user U_n (12) has optional hidden server requests portion HQ_n (285), optional hidden instructions portion HO_n (286), and optional hidden information portion J_n (287).

- 5 The server requests portion SQ_n (282) of the service and/or information request IQ_n (28) has queries $QS_{n1} \dots QS_{nu}$ (288), which may be derived from the query field names $QN_{n1} \dots QN_{nu}$ (262) and the corresponding server query values $QV_{n1} \dots QV_{nu}$ (200) of the query elements $QE_{n1} \dots QE_{nu}$ (258).
- 10 The server requests portion SQ_n (282) of the service and/or information request IQ_n (28) may also have the server addresses $A_{n1} \dots A_{nu}$ (265), which may be derived from the server field names $AN_{n1} \dots AN_{nm}$ (264) and the corresponding server name values $AV_{n1} \dots AV_{nu}$ (201) of the server name elements $AE_{n1} \dots AE_{nu}$ (260).
- 15 The optional instructions portion VO_n (283) of the user client requests $QC_{n1} \dots QC_{nu}$ (280) accessible to the user U_n (12) of the service and/or information request IQ_n (28) may have optional instructions $V_{n1} \dots V_{nv}$ (289), which may be derived from the optional instruction field names $VN_{n1} \dots VN_{nv}$ (266) and the corresponding optional instruction values $VV_{n1} \dots VV_{nv}$ (202). The optional instructions $V_{n1} \dots V_{nv}$ (289) may
- 20 optionally be used by the client C_n (16) and/or the server PS (18), and/or incorporated into the requests $Q_{n1} \dots Q_{nm}$ (29) to be made of the servers $S_1 \dots S_z$ (20) designated by the server designations $S_{n1} \dots S_{nm}$ (30), corresponding to the requests $Q_{n1} \dots Q_{nm}$ (29) associated with the user U_n (12).

606226 6/20/2000

The alternate request portion **AL_n (284)** of the user client requests **QC_{n1}...QC_{nu} (280)** accessible to the user **U_n (12)** of the service and/or information request **IQ_n (28)** may be derived from one of the alternate request links **QL_{n1}...QL_{na} (203)**, or one of the server request links **UL_{n1}...UL_{ns} (204)**, or one of the additional request links **SL_{n1}...SL_{nw} (71)**.

The optional hidden server requests portion **HQ_{n1}...HQ_{nh} (281)** of the hidden client requests **HC_{n1}...HC_{nh} (281)** hidden from the user **U_n (12)** may have hidden queries **QH_{n1}...QH_{nh} (290)** and corresponding hidden server addresses **AH_{n1}...AH_{nh} (291)**.

The hidden queries **QH_{n1}...QH_{nh} (290)** of the optional hidden server requests portion **HQ_{n1}...HQ_{nh} (281)** of the service and/or information request **IQ_n (28)** may be derived from the hidden query field names **Qn_{n1}...Qn_{nh} (268)** and the corresponding hidden query values **Qv_{n1}...Qv_{nh} (270)**.

The hidden server addresses **AH_{n1}...AH_{nh} (291)** of the optional hidden server requests portion **HQ_{n1}...HQ_{nh} (281)** of the service and/or information request **IQ_n (28)** may be derived from the hidden server field names **An_{n1}...An_{nh} (272)** and the corresponding server hidden server name values **Av_{n1}...Av_{nh} (274)**.

The hidden queries **QH_{n1}...QH_{nh} (290)** may optionally be appended to the queries **QS_{n1}...QS_{nu} (288)** to be made of the servers **S₁...S_z (20)**. The hidden server

addresses **AH_{n1}...AH_{nh} (291)** may optionally be appended to the server addresses **A_{n1}...A_{nu} (265)**. The appended queries **QS_{n1}...QS_{nu} (288)** may then be made of the servers **S₁...S_z (20)** designated by the server designations **S_{n1}...S_{nm} (30)**, corresponding to the resulting appended requests **Q_{n1}...Q_{nm} (29)** associated with the user **U_n (12)**, in accordance with the appended server addresses **A_{n1}...A_{nu} (265)**.

The appended requests **Q_{n1}...Q_{nm} (29)** will hereinafter be used synonymously with the requests **Q_{n1}...Q_{nm} (29)**, the appended queries **QS_{n1}...QS_{nu} (288)** will hereinafter be used synonymously with the queries **QS_{n1}...QS_{nu} (288)**, and the appended server addresses **A_{n1}...A_{nu} (265)** will hereinafter be used synonymously with the server addresses **A_{n1}...A_{nu} (265)**.

The optional hidden instructions portion **HO_n (286)** of the hidden client requests **HC_{n1}...HC_{nh} (281)** hidden from the user **U_n (12)** of the service and/or information request **IQ_n (28)** have optional hidden instructions **H_{n1}...H_{ni} (292)**, which may be derived from the hidden instruction field names **Vn_{n1}...Vn_{ni} (275)** and the corresponding optional hidden instruction values **Vv_{n1}...Vv_{ni} (276)**. The optional hidden instructions **H_{n1}...H_{ni} (292)** may optionally be appended to the optional instructions **Vn₁...Vn_v (289)** and/or may optionally be used by the client **C_n (16)** and/or the server **PS (18)**, and/or incorporated into the requests **Q_{n1}...Q_{nm} (29)** to be made of the servers **S₁...S_z (20)** designated by the server designations **S_{n1}...S_{nm} (30)**, corresponding to the requests **Q_{n1}...Q_{nm} (29)** associated with the user **U_n (12)**. The

appended instructions $V_{n1} \dots V_{nv}$ (289) will hereinafter be used synonymously with the instructions $V_{n1} \dots V_{nv}$ (289).

The optional hidden information portion J_n (287) of the hidden client requests
5 $HC_{n1} \dots HC_{nh}$ (281) hidden from the user U_n (12) of the service and/or information request IQ_n (28) may be derived from the optional hidden information element field name Jn_n (277) and the optional hidden information element value Jv_n (278), and may optionally be used by the client C_n (16) and/or the server PS (18), and/or incorporated into the requests $Q_{n1} \dots Q_{nm}$ (29) to be made of the servers $S_1 \dots S_z$ (20)
10 designated by the server designations $S_{n1} \dots S_{nm}$ (30), corresponding to the requests $Q_{n1} \dots Q_{nm}$ (29) associated with the user U_n (12).

Now, again, each of the users $U_1 \dots U_n$ (12) communicate the corresponding user service and/or information requests $iq_1 \dots iq_n$ (27) therethrough the corresponding user
15 interfaces $I_1 \dots I_n$ (14) to the corresponding clients $C_1 \dots C_n$ (16), which optionally format the corresponding user service and/or information requests $iq_1 \dots iq_n$ (27) into the corresponding service and/or information requests $IQ_1 \dots IQ_n$ (28), as required.

The user service and/or information requests $iq_1 \dots iq_n$ (27) may be communicated
20 therefrom the completed service and/or information entry request forms $IF_1 \dots IF_n$ (230) at the user interfaces $I_1 \dots I_n$ (14) thereto the clients $C_1 \dots C_n$ (16) or alternatively therefrom the service and/or information entry request forms $IE_1 \dots IE_n$ (38) at the corresponding the user interfaces $I_1 \dots I_n$ (14) therethrough the alternate request links

QL₁₁...QL_{na} (203) or the server request links **UL₁₁...UL_{ns} (204)** or the additional request links **SL₁₁...SL_{nw} (71)**.

The user service and/or information requests **iq₁...iq_n (27)** may be communicated as the elements, values, field names, optional instructions, and/or alternate requests entered thereinto the completed service and/or information entry request form **IF_n (230)** therefrom the corresponding user interfaces **I₁...I_n (14)** to the corresponding clients **C₁...C_n (16)**.

10 The users **U₁...U_n (12)** may, thus, communicate the corresponding user service and/or information requests **iq₁...iq_n (27)** to the clients **C₁...C_n (16)** therethrough the user interfaces **I₁...I_n (14)**, upon entering the corresponding user inputs **UI₁...UI_n (25)** thereinto the corresponding service and/or information entry request forms **IE₁...IE_n (38)** at the corresponding the user interfaces **I₁...I_n (14)**. The completed service and/or information entry request forms **IF₁...IF_n (230)** are derived therefrom the user inputs **UI₁...UI_n (25)** having the corresponding user service and/or information requests **iq₁...iq_n (27)**, which may be entered as values or alternate requests thereinto the corresponding service and/or information entry request forms **IE₁...IE_n (38)**.

20 The user **U₁...U_n (12)** may alternatively communicate the user service and/or information requests **iq₁...iq_n (27)** by entering the alternate request links **QL₁₁...QL_{na} (203)** or the server request links **UL₁₁...UL_{ns} (204)** or the additional request links **SL₁₁...SL_{nw} (71)** thereinto the service and/or information entry request form **IE₁...IE_n**

SECRET SHOT 500

(38) or thereinto the completed service and/or information request form $IF_1...IF_n$ (230).

The server **PS (18)** and/or the C_n (16) may alternatively and/or additionally use
5 information resident within the server **PS (18)** and/or the client C_n (16), such as
default information, and/or information communicated therefrom the user U_n (12)
therethrough the user interface I_n (14) to the client C_n (16) to make the requests
 $Q_{n1}...Q_{nm}$ (29) of the servers $S_1...S_z$ (20), in accordance with the designation scheme
which designates the ones of the servers $S_1...S_z$ (20) to be communicated with
10 corresponding to the requests $Q_{11}...Q_{nm}$ (29) as the corresponding server designations
 $S_{11}...S_{nm}$ (30).

FIG. 81 is a schematic representation showing queries $QQ_{n1}...QQ_{nm}$ (53) and
corresponding server addresses $AQ_{n1}...AQ_{nm}$ (54). FIGS. 82-85 shows the schematic
15 representation of FIG. 81 having typical values.

D. OPTIONAL INSTRUCTIONS

Typically, information within the optional instructions $V_{11}...V_{nv}$ (289), and/or the
optional hidden instructions $H_{11}...H_{ni}$ (292), and/or the optional hidden information
20 portion J_n (287) are used by the server **PS (18)** and/or specific ones of the clients
 $C_1...C_n$ (16), but may also be used by the servers $S_1...S_z$ (20).

00000 000000

Now, in yet more detail, the user inputs **UI₁...UI_n (25)** may have one or more of the same and/or different optional instruction values **VV₁₁...VV_{nv} (202)**. The optional instruction values **VV₁₁...VV_{nv} (202)** may typically have instructions, which may be used by the server **PS (18)** and/or the clients **C₁...C_n (16)**, such as, for example, as
5 instructions on how to request, organize, present and/or display, and/or retrieve services and/or information from the servers **S₁...S_z (20)** and/or other suitable instructions.

Typical information that may be incorporated into the optional instruction values **VV_{n1}...VV_{nv} (202)** may include, for example, Searches per Group **311** and Group **312**,
10 shown in FIGS. 5A, 5B, and 6-10 for a particular one of the service and/or information entry request forms **IE_n (38)** at the user interface **I_n (14)** shown in FIGS. 75-80.

The Searches per Group **311** is considered to be the number of the server query values **QV_{n1}...QV_{nu} (200)**, associated therewith corresponding ones of the server name values
15 **AV_{n1}...AV_{nu} (201)**, corresponding to the requests **Q_{n1}...Q_{nm} (29)** to make of the servers **S₁...S_z (20)**. The Group **312** is considered to be the group of the server query values **QV_{n1}...QV_{nu} (200)** to communicate thereto ones of the servers **S₁...S_z (20)** associated therewith the corresponding ones of the server name values **AV_{n1}...AV_{nu} (201)**, in accordance with the designation scheme corresponding to the corresponding
20 ones of the server designations **S_{n1}...S_{nm} (30)**, corresponding to the requests **Q_{n1}...Q_{nm} (29)**.

032206442000

Page **313**, which includes certain service and/or information location information,
 which may be incorporated into the requests **Q_{n1...Q_{nm}}** (**29**) to be made of the
 associated corresponding ones of the servers **S_{1...S_z}** (**20**), in accordance with the
 designation scheme corresponding to the corresponding ones of the server designations
 5 **S_{n1...S_{nm}}** (**30**), may also be typically incorporated into the optional instruction values
VV_{n1...VV_{nv}} (**202**).

Timeout per Search Engine **314**, which is substantially the maximum time for the
 server **PS** (**18**) and/or the particular client **C_n** (**16**) making the requests **Q_{n1...Q_{nm}}** (**29**)
 10 to wait for each of the responses **R_{n1...R_{nm}}** (**32**) therefrom certain ones of the servers
S_{1...S_z} (**20**), in accordance with the designation scheme which designates the certain
 ones of the servers **S_{1...S_z}** (**20**) to be communicated with corresponding to the requests
Q_{n1...Q_{nm}} (**29**) as the corresponding server designations **S_{n1...S_{nm}}** (**30**), may also be
 typically incorporated into the optional instruction values **VV_{n1...VV_{nv}}** (**202**).

15 URL's per Search Engine **315**, which is the number of links and/or descriptions to be
 returned to the user interface **I_n** (**14**) from each of the responses **R_{n1...R_{nm}}** (**32**), may
 also be typically incorporated into the optional instruction values **VV_{n1...VV_{nv}}** (**202**).

Search Engine Results **316** and URL Details **317**, each of which designate different
 20 presentation and/or display schemes to be presented at the user interface **I_n** (**14**), may
 also be typically incorporated into the optional instruction values **VV_{n1...VV_{nv}}** (**202**).

In those instance in which, for example, the service and/or information entry request form IE_n (38) at the user interface I_n (14) has only one entry field for one of the requests Q_{n1} (29), as in FIGS. 6, 8, and 10, and the optional instruction values $VV_{11}...VV_{nv}$ (202) are not visible, the server **PS (18)** and/or the particular client C_n (16) may then have default values resident therein for the Searches per Group **311**, and/or the Group **312**, and/or the Page **313**, and/or the Timeout per Search Engine **314**, and/or the URL's per Search Engine **315**, and/or the Search Engine Results **316**, and/or the URL Details **317**, and/or other suitable ones of the optional instruction values $VV_{11}...VV_{nv}$ (202), and/or the server **PS (18)** and/or the particular client C_n (16) may establish the default values, and/or the default values may be incorporated into the optional hidden instruction values $Vv_{n1}...Vv_{ni}$ (276).

The server **PS (18)** and/or the particular client C_n (16) may make the requests $Q_{n1}...Q_{nm}$ (29) of the servers $S_1...S_z$ (20), according to the designation scheme corresponding to the corresponding ones of the server designations $S_{n1}...S_{nm}$ (30), and the optional instruction values $VV_{n1}...VV_{nv}$ (202), typically having the Searches per Group **311**, and/or the Group **312**, and/or the Page **313**, and/or the Timeout per Search Engine **314**, and/or the URL's per Search Engine **315**, and/or the Search Engine Results **316**, and/or the URL Details **317**, and/or the default values which may be established or be resident within the server **PS (18)** and/or the particular client C_n (16), and/or the optional hidden instruction values $Vv_{n1}...Vv_{ni}$ (276), and/or other information incorporated into the hidden client request elements $HP_{n1}...HP_{nh}$ (256) hidden from the user U_n (12).

00000-00000000

E. COMMUNICATING THE SERVICE AND/OR INFORMATION REQUESTS

Now, each of the users $U_1 \dots U_n$ (12) communicate the corresponding user service and/or information requests $iq_1 \dots iq_n$ (27) therethrough the corresponding user
5 interfaces $I_1 \dots I_n$ (14) to the corresponding clients $C_1 \dots C_n$ (16), which optionally format the corresponding user service and/or information requests $iq_1 \dots iq_n$ (27) into the corresponding service and/or information requests $IQ_1 \dots IQ_n$ (28). The clients $C_1 \dots C_n$ (16) communicate the corresponding service and/or information requests $IQ_1 \dots IQ_n$ (28) thereto the server PS (18) and/or use the corresponding user service
10 and/or information requests $iq_1 \dots iq_n$ (27) internally to formulate the requests $Q_{11} \dots Q_{nm}$ (29).

F. PARSING, PROCESSING, AND/OR FORMATTING THE SERVICE AND/OR INFORMATION REQUESTS

15 The server PS (18) and/or the clients $C_1 \dots C_n$ (16) parse, process, and/or format the service and/or information requests $IQ_1 \dots IQ_n$ (28) into the requests $Q_{11} \dots Q_{nm}$ (29), the optional instructions $VJ_{11} \dots VJ_{nk}$ (52), and information to open connections $OC_{11} \dots OC_{nm}$ (323). FIG. 86 shows a particular one of the requests Q_{nm} (29), the optional instructions $VJ_{n1} \dots VJ_{nk}$ (52), and the information to open connections
20 $OC_{11} \dots OC_{nm}$ (323), which may be parsed, processed, and/or formatted from a particular one of the service and/or information requests IQ_n (28). The clients $C_1 \dots C_n$ (16) may alternatively and/or additionally parse, process, and/or format the user service

FIG. 86

and/or information requests $iq_1...iq_n$ (27) directly into the requests $Q_{11}...Q_{nm}$ (29), and/or the optional instructions $VJ_{11}...VJ_{nk}$ (52) and the information required to open the connections $OC_{11}...OC_{nm}$ (323), as required.

5 Upon receipt of the service and/or information requests $IQ_1...IQ_n$ (28) at the server **PS** (18), communicated therefrom the clients $C_1...C_n$ (16), the server **PS** (18) parses, processes, and/or formats each of the corresponding service and/or information requests $IQ_1...IQ_n$ (28) into the corresponding queries $QQ_{11}...QQ_{nm}$ (53), the corresponding server addresses $AQ_{11}...AQ_{nm}$ (54) to open connections $OC_{11}...OC_{nm}$ (323) with and
10 make the requests $Q_{11}...Q_{nm}$ (29) thereof the servers $S_1...S_z$ (20), in accordance with the designation scheme which designates the certain ones of the servers $S_1...S_z$ (20) to be communicated with corresponding to the requests $Q_{11}...Q_{nm}$ (29), and/or the optional instructions $VJ_{11}...VJ_{nk}$ (52) to be used by the server **PS** (18) in making the requests $Q_{11}...Q_{nm}$ (29) and/or in processing, formatting, grouping, and organizing the
15 responses $R_{11}...R_{nm}$ (32) from the ones of the servers $S_1...S_z$ (20) corresponding to the server designations $S_{11}...S_{nm}$ (30), and/or the additional optional responses $RA_{11}...RA_{nm}$ (40), into the corresponding service and/or information responses $IR_1...IR_n$ (34), as shown in FIG. 86.

20 Alternatively and/or additionally, upon receipt of the user service and/or information requests $iq_1...iq_n$ (27) at the corresponding clients $C_1...C_n$ (16), the corresponding clients $C_1...C_n$ (16) may parse, process, and/or format each of the user service and/or information requests $iq_1...iq_n$ (27) into corresponding queries $QQ_{11}...QQ_{nm}$ (53),

SECRET 01/20/2000

corresponding server addresses $AQ_{11}...AQ_{nm}$ (54) to open connections $OC_{11}...OC_{nm}$ (323) with and make the requests $Q_{11}...Q_{nm}$ (29) thereof the servers $S_1...S_z$ (20), in accordance with the designation scheme which designates the certain ones of the servers $S_1...S_z$ (20) to be communicated with corresponding to the requests $Q_{11}...Q_{nm}$ (29), and/or the optional instructions $VJ_{11}...VJ_{nk}$ (52) to be used by the corresponding clients $C_1...C_n$ (16) in making the requests $Q_{11}...Q_{nm}$ (29) and/or in processing, formatting, grouping, and organizing the responses $R_{11}...R_{nm}$ (32) from the ones of the servers $S_1...S_z$ (20) corresponding to the server designations $S_{11}...S_{nm}$ (30), and/or the additional optional responses $RA_{11}...RA_{nm}$ (40), into the corresponding user service and/or information responses $Ir_1...Ir_n$ (36).

The server PS (18) parses, processes, and/or formats each of the service and/or information requests $IQ_1...IQ_n$ (28) into queries, server addresses to make the queries of, query groups and/or server groups, and instructions to be used by the server PS (18), typically when the server PS (18) makes the requests $Q_{11}...Q_{nm}$ (29) of the servers $S_1...S_z$ (20) corresponding to the server designations $S_{11}...S_{nm}$ (30) and/or the server PS (18) processes, formats, groups, and organizes the responses $R_{11}...R_{nm}$ (32) from the ones of the servers $S_1...S_z$ (20) corresponding to the server designations $S_{11}...S_{nm}$ (30) at the server PS (18). Otherwise, the clients $C_1...C_n$ (16) may parse, process, and/or format each of the user service and/or information requests $iq_1...iq_n$ (27) into queries, server addresses to make the queries of, query groups and/or server groups, and instructions, typically when the clients $C_1...C_n$ (16) make the requests $Q_{11}...Q_{nm}$ (29) of the servers $S_1...S_z$ (20) corresponding to the server designations

00000 000000

$S_{11} \dots S_{nm}$ (30) and/or the clients $C_1 \dots C_n$ (16) process, format, group, and organize the responses $R_{11} \dots R_{nm}$ (32) from the ones of the servers $S_1 \dots S_z$ (20) corresponding to the server designations $S_{11} \dots S_{nm}$ (30) at the corresponding clients $C_1 \dots C_n$ (16).

Choice as to whether the server **PS** (18) and/or the clients $C_1 \dots C_n$ (16) makes the requests $Q_{11} \dots Q_{nm}$ (29) of the servers $S_1 \dots S_z$ (20) corresponding to the server designations $S_{11} \dots S_{nm}$ (30) and/or process, format, group, and organize the responses $R_{11} \dots R_{nm}$ (32) are dependent on processing capabilities of the server **PS** (18) and/or the clients $C_1 \dots C_n$ (16) and other factors.

10 Ones of the requests $Q_{11} \dots Q_{nm}$ (29) may require further formatting and/or processing by the server **PS** (18) and/or the corresponding clients $C_1 \dots C_n$ (16), and/or other ones of the requests $Q_{11} \dots Q_{nm}$ (29) may already be formatted in accordance with requirements with respect to communications protocols, the service and/or information requests $IQ_1 \dots IQ_n$ (28), the servers $S_1 \dots S_z$ (20), and/or the optional servers
15 $SO_1 \dots SO_p$ (22), and/or the server **PS** (18), and/or other requirements of the network 24 of the client-server multitasking system 10. The server **PS** (18) and/or the clients $C_1 \dots C_n$ (16) parse, process, and/or format the requests $Q_{11} \dots Q_{nm}$ (29), as required.

G. FORMULATING THE REQUESTS

20 Each of the optional instructions $VJ_{11} \dots VJ_{nk}$ (52) is typically parsed, and/or processed, and/or formatted, and/or grouped, and/or organized into particular ones of the optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) for use by the server **PS** (18) and/or particular ones of

000000000000000000

the clients **C₁...C_n (16)**, a particular one of the clients **C₁...C_n (16)** being designated as the client **C_n (16)**.

Each of the alternate request links **QL_{n1}...QL_{na} (203)** and the additional request links
5 **SL₁₁...SL_{nw} (71)** are also typically parsed, and/or processed, and/or formatted, and/or grouped, and/or organized for use by the server **PS (18)** and/or particular ones of the clients **C₁...C_n (16)**, a particular one of the clients **C₁...C_n (16)** being designated as the client **C_n (16)**.

10 The alternate request links **QL_{n1}...QL_{na} (203)** allow the user **U_n (12)** to make the service and/or information request **IQ₁...IQ_n (28)** with preconfigured optional default selections already placed therein the service and/or information request **IQ₁...IQ_n (28)** for the user **U_n (12)**. The additional request links **SL_{n1}...SL_{nw} (71)** allow the user **U_n (12)** to make additional optional selections, based upon information and/or services
15 previously requested by the user **U_n (12)**.

Typical ones of the optional instructions **VJ_{n1}...VJ_{nk} (52)** and the additional request links **SL_{n1}...SL_{nw} (71)** that may be parsed, processed, and/or formatted from the service and/or information request **IQ_n (28)** and/or the user service and/or information
20 request **iq_n (27)** are shown in FIG. 90.

The requests **Q₁₁...Q_{nm} (29)** may be made by the server **PS (18)** and/or the corresponding clients **C₁...C_n (16)** of the associated corresponding ones of the servers

0000000000000000000000

$S_1 \dots S_z$ (20), according to the designation scheme corresponding to the corresponding ones of the server designations $S_{11} \dots S_{nm}$ (30), in accordance with the optional instructions $VJ_{11} \dots VJ_{nk}$ (52) and/or default values for the optional instructions $VJ_{11} \dots VJ_{nk}$ (52) resident within the server PS (18) and/or the corresponding clients $C_1 \dots C_n$ (16).

The service and/or information responses $IR_1 \dots IR_n$ (34) and/or the corresponding user service and/or information responses $ir_1 \dots ir_n$ (36) may be formulated by the server PS (18) and/or the corresponding clients $C_1 \dots C_n$ (16), in accordance with the optional instructions $VJ_{11} \dots VJ_{nk}$ (52) and/or default values for the optional instructions $VJ_{11} \dots VJ_{nk}$ (52) resident within the server PS (18) and/or the corresponding clients $C_1 \dots C_n$ (16).

The optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) and the additional request links $SL_{11} \dots SL_{nw}$ (71) for a particular one of the service and/or information requests IQ_n (28) may typically have Searches per Group 326, and/or Group 327, and/or Page 328A and/or Page 328B, and/or Timeout per Search Engine 329, and/or URL's per Search Engine 330, and/or Search Engine Results 331A and/or Search Display 331B, and/or URL Details 332A and/or Description and/or List 332B, as shown in FIG. 90. Default values may additionally and/or alternatively be established or be resident for any and/or all of the optional instructions $VJ_{11} \dots VJ_{nk}$ (52) within the server PS (18) and/or the clients $C_1 \dots C_n$ (16).

The Searches per Group **326** are typically considered to be the number of the queries **QQ_{n1}...QQ_{nm} (53)** to make of the servers **S₁...S_z (20)** thereof at the corresponding server addresses **AQ_{n1}...AQ_{nm} (54)**, in accordance with the designation scheme which designates the certain ones of the servers **S₁...S_z (20)** to make the requests **Q_{n1}...Q_{nm} (29)** thereof as the corresponding ones of the server designations **S_{n1}...S_{nm} (30)**.

The Group **327** is considered to be the group of the queries **QQ_{n1}...QQ_{nm} (53)** to make of the servers **S₁...S_z (20)** thereof at the corresponding server addresses **AQ_{n1}...AQ_{nm} (54)**, in accordance with the designation scheme which designates the certain ones of the servers **S₁...S_z (20)** to make the requests **Q_{n1}...Q_{nm} (29)** thereof as the corresponding ones of the server designations **S_{n1}...S_{nm} (30)**.

The Page **328A** and the Page **328B** have certain service and/or information location information, which may be incorporated into the requests **Q_{n1}...Q_{nm} (29)** to be made of the associated corresponding ones of the servers **S₁...S_z (20)** thereof, at the corresponding server addresses **AQ_{n1}...AQ_{nm} (54)**, in accordance with the designation scheme corresponding to the corresponding ones of the server designations **S_{n1}...S_{nm} (30)**.

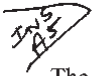

The Timeout per Search Engine **329** is considered to be substantially the maximum time for the server **PS (18)** and/or the particular client **C_n (16)** making the requests **Q_{n1}...Q_{nm} (29)** to wait for each of the responses **R_{n1}...R_{nm} (32)** therefrom certain ones of the servers **S₁...S_z (20)**, in accordance with the designation scheme which

002200 64204000

designates the certain ones of the servers $S_1 \dots S_z$ (20) to be communicated with corresponding to the requests $Q_{n1} \dots Q_{nm}$ (29) as the corresponding server designations $S_{n1} \dots S_{nm}$ (30).

- 5 The URL's per Search Engine 330, is considered to be the number of links, and/or descriptions, and/or prices/values, and/or images to be returned to the user interface I_n (14) from each of the responses $R_{n1} \dots R_{nm}$ (32).

- The Search Engine Results 331A and the Search Display 331B each designate
10 presentation and/or display schemes to be presented at the user interface I_n (14). The URL Details 332A and the Description and/or List 332B each also designate presentation and/or display schemes to be presented at the user interface I_n (14).

-  The optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) may also typically have Next Group 333
15 and Previous Group 334, which are considered to be the next group and the previous group, respectively, to make the queries $QQ_{n1} \dots QQ_{nm}$ (53) thereof at the next and previous ones of the corresponding groups of the queries $QQ_{n1} \dots QQ_{nm}$ (53) to make of the servers $S_1 \dots S_z$ (20) thereof at the corresponding server addresses $AQ_{n1} \dots AQ_{nm}$ (54), in accordance with the designation scheme which designates the certain ones of
20 the servers $S_1 \dots S_z$ (20) to make the requests $Q_{n1} \dots Q_{nm}$ (29) thereof as the corresponding ones of the server designations $S_{n1} \dots S_{nm}$ (30). Information about Current Group 337 having the queries $QQ_{n1} \dots QQ_{nm}$ (53) and the server addresses $AQ_{n1} \dots AQ_{nm}$ (54) is also shown. Current Page Number 338 is also indicated.

2025 RELEASE UNDER E.O. 14176

The optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) for a particular one of the service and/or information requests IQ_n (28) may also typically have Next Page 335 and Previous Page 336, each of which has certain different service and/or information location

5 information, which may be incorporated into the requests $Q_{n1} \dots Q_{nm}$ (29) to be made of the associated corresponding ones of the servers $S_1 \dots S_z$ (20), in accordance with the designation scheme corresponding to the corresponding ones of the server designations $S_{n1} \dots S_{nm}$ (30).

10 H. DETERMINING QUERIES AND SERVERS TO MAKE THE REQUESTS THEREOF

The server PS (18) and/or the clients $C_1 \dots C_n$ (16) evaluate the optional instructions $VJ_{11} \dots VJ_{nk}$ (52), determine the queries $QQ_{11} \dots QQ_{nm}$ (53) and the servers $S_1 \dots S_z$ (20) to make the requests $Q_{11} \dots Q_{nm}$ (29) thereof at the corresponding server addresses $AQ_{11} \dots AQ_{nm}$ (54), in accordance with the designation scheme which designates the

15 certain ones of the servers $S_1 \dots S_z$ (20) to be communicated with as the server designations $S_{11} \dots S_{nm}$ (30), corresponding to the requests $Q_{11} \dots Q_{nm}$ (29), and group the queries $QQ_{11} \dots QQ_{nm}$ (53) and the corresponding server addresses $AQ_{11} \dots AQ_{nm}$ (54) associated therewith.

20 FIG. 90 shows typical ones of the queries $QQ_{n1} \dots QQ_{nm}$ (53), the corresponding server addresses $AQ_{n1} \dots AQ_{nm}$ (54), and the optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) that may

00000: 01.04.2000

be parsed, processed, and/or formatted from the service and/or information request IQ_n (28) and/or the user service and/or information request iq_n (27).

The queries $QQ_{11}...QQ_{nm}$ (53) and the servers $S_1...S_z$ (20) to make the requests
5 $Q_{11}...Q_{nm}$ (29) thereof are typically based upon the values designated therein and
parsed from the queries $QQ_{11}...QQ_{nm}$ (53) and the values designated therein and
parsed from the corresponding server addresses $AQ_{11}...AQ_{nm}$ (54), in accordance with
the designation scheme which designates the certain ones of the servers $S_1...S_z$ (20) to
be communicated with as the server designations $S_{11}...S_{nm}$ (30), corresponding to the
10 requests $Q_{11}...Q_{nm}$ (29), and the Searches per Group 326, the Group 327, the Page
328A and/or the Page 328B within the optional instructions $VJ_{11}...VJ_{nk}$ (52).

The server PS (18) and/or the clients $C_1...C_n$ (16) evaluate the values therein the
Group 327, the Searches per Group 326, the queries $QQ_{11}...QQ_{nm}$ (53), the
15 corresponding server addresses $AQ_{11}...AQ_{nm}$ (54), and determine the servers $S_1...S_z$
(20) corresponding to the corresponding server addresses $AQ_{11}...AQ_{nm}$ (54) within the
Group 327, in accordance with the designation scheme which designates the certain
ones of the servers $S_1...S_z$ (20) to be communicated with as the server designations
 $S_{11}...S_{nm}$ (30) to make the requests $Q_{11}...Q_{nm}$ (29) thereof, and the Page 328A
20 and/or the Page 328B.

The Group 327 and the Searches per Group 326 are used to determine which of the
servers $S_1...S_z$ (20) to make the requests $Q_{11}...Q_{nm}$ (29) thereof.

The server **PS (18)** and/or the clients **C₁...C_n (16)** determine the size of the Group **327** from the Searches per Group **326** and the Group **327**, and the servers **S₁...S_z (20)** associated with the corresponding server addresses **AQ₁₁...AQ_{nm} (54)** within the

5 Group **327**, in accordance with the designation scheme which designates the certain ones of the servers **S₁...S_z (20)** to be communicated with as the server designations **S₁₁...S_{nm} (30)**.

The Searches per Group **326** and the Group **327** are used to formulate the current

10 request groups **QA_{1c}...QA_{nc} (50)** having the corresponding queries **QQ₁₁...QQ_{nm} (53)** and the corresponding server addresses **AQ₁₁...AQ_{nm} (54)** to open connections with and make the requests **Q₁₁...Q_{nm} (29)** thereof the servers **S₁...S_z (20)**, in accordance with the designation scheme which designates the certain ones of the servers **S₁...S_z (20)** to be communicated with corresponding to the requests **Q₁₁...Q_{nm} (29)** thereof as the server designations **S₁₁...S_{nm} (30)**, corresponding to the requests

15 **Q₁₁...Q_{nm} (29)**, for corresponding ones of the service and/or information requests **IQ₁...IQ_n (28)** and/or the user service and/or information requests **iq₁...iq_n (27)**.

The queries **QQ₁₁...QQ_{nm} (53)**, the server addresses **AQ₁₁...AQ_{nm} (54)**, and the Page

20 **328A** and/or the Page **328B** provide the location of information and/or services to the server **PS (18)** and/or the clients **C₁...C_n (16)** within the Group **327**, in accordance with the Searches per Group **326**, to make the requests **Q₁₁...Q_{nm} (29)** thereof, in accordance with the designation scheme which designates the ones of the servers

00000 00000

S₁...S_z (20) to make the requests Q₁₁...Q_{nm} (29) thereof as the server designations S₁₁...S_{nm} (30), corresponding to the requests Q₁₁...Q_{nm} (29).

The URL's per Search Engine 330 determine whether the server PS (18) and/or the clients C₁...C_n (16) communicate additional ones of the requests Q₁₁...Q_{nm} (29) of the servers S₁...S_z (20), depending upon the number of the links, and/or descriptions, and/or prices/values, and/or images requested by ones of the user U₁...U_n (12) to be returned to the user interfaces I₁...I_n (14), and the number of links, and/or descriptions, and/or prices/values, and/or images available within each of the corresponding ones of the responses R₁₁...R_{nm} (32). If insufficient ones of the links, and/or descriptions, and/or prices/values, and/or images are not available within the responses R₁₁...R_{nm} (32) to satisfy delivery of the number of the URL's per Search Engine 330 requested by certain ones the users U₁...U_n (12), the server PS (18) and/or the clients C₁...C_n (16) may yet make additional ones of the requests Q₁₁...Q_{nm} (29) of the servers S₁...S_z (20), in order deliver the number of the links, and/or descriptions, and/or prices/values, and/or images requested in the number of the URL's per Search Engine 330 to the user interfaces I₁...I_n (14) requested by certain ones of the user U₁...U_n (12).

If the optional instructions do not indicate which ones of the servers S₁...S_z (20) to make the requests Q₁₁...Q_{nm} (29) thereof, in accordance with the designation scheme which designates the certain ones of the servers S₁...S_z (20) to be communicated with as the server designations S₁₁...S_{nm} (30), corresponding to the requests Q₁₁...Q_{nm}

(29), default values may be used. The default values may be resident within the server PS (18) and/or the clients $C_1...C_n$ (16).

If all and/or a portion of the optional instructions $VJ_{11}...VJ_{nk}$ (52) are absent and/or are not communicated thereto the server PS (18) and/or the clients $C_1...C_n$ (16), default values may be used. The default values may be resident within the server PS (18) and/or the clients $C_1...C_n$ (16).

I. GROUPING THE QUERIES AND SORTING/GROUPING CRITERIA

10 Upon receipt of the service and/or information requests $IQ_1...IQ_n$ (28) at the server PS (18), communicated therefrom the corresponding clients $C_1...C_n$ (16), the server PS (18) parses, processes, and/or formats each of the service and/or information requests $IQ_1...IQ_n$ (28) into the corresponding current request groups $QA_{1c}...QA_{nc}$ (50) having the corresponding queries $QQ_{11}...QQ_{nm}$ (53) and the corresponding server addresses $AQ_{11}...AQ_{nm}$ (54) to open connections with and make the requests $Q_{11}...Q_{nm}$ (29) thereof the servers $S_1...S_z$ (20), in accordance with the designation scheme which designates the certain ones of the servers $S_1...S_z$ (20) to be communicated with corresponding to the requests $Q_{11}...Q_{nm}$ (29) as the corresponding server designations $S_{11}...S_{nm}$ (30), shown for a particular one of the service and/or information requests IQ_n (28) in FIG. 59. The process 104 of deriving the service and/or information response IR_n (34) for the grouping and/or sorting criteria of FIG. 59 is shown in FIG. 70-1A.

The server **PS (18)** also parses, processes, and/or formats each of the service and/or information requests **IQ₁...IQ_n (28)** into the corresponding request groups **QA₁₁...QA_{nz} (51)** having the corresponding other queries **QQ_{1a}...QQ_{nz} (55)** and the corresponding other server addresses **AQ_{1a}...AQ_{nz} (56)**, and the corresponding optional instructions **VJ₁₁...VJ_{nk} (52)**, also shown for a particular one of the service and/or information requests **IQ_n (28)** in FIG. 59.

Certain ones of the clients **C₁...C_n (16)** may alternatively and/or additionally make the requests **Q₁₁...Q_{nm} (29)** thereof the servers **S₁...S_z (20)**, in accordance with the designation scheme which designates the certain ones of the servers **S₁...S_z (20)** to be communicated with corresponding to the requests **Q₁₁...Q_{nm} (29)** as the corresponding server designations **S₁₁...S_{nm} (30)**, and formulate the corresponding user service and/or information response **ir₁...ir_n (36)**, as previously described, as shown in FIG. 63. The process **104** of deriving the user service and/or information response **ir_n (36)** for the grouping and/or sorting criteria of FIG. 59 is shown in FIG. 70-1A.

Upon receipt of the user service and/or information requests **iq₁...iq_n (27)** at the corresponding clients **C₁...C_n (16)**, certain ones of the corresponding clients **C₁...C_n (16)** may parse, process, and/or format the corresponding user service and/or information requests **iq₁...iq_n (27)** into the corresponding current request groups **QA_{1c}...QA_{nc} (50)** having the corresponding queries **QQ₁₁...QQ_{nm} (53)** and the corresponding server addresses **AQ₁₁...AQ_{nm} (54)** to open connections with and make

the requests $Q_{11}\dots Q_{nm}$ (29) thereof the servers $S_1\dots S_z$ (20), in accordance with the designation scheme which designates the certain ones of the servers $S_1\dots S_z$ (20) to be communicated with corresponding to the requests $Q_{11}\dots Q_{nm}$ (29), shown for a particular one of the user service and/or information requests iq_n (27) in FIG. 63. The corresponding clients $C_1\dots C_n$ (16) may also parse, process, and/or format the corresponding user service and/or information response $ir_1\dots ir_n$ (36) into the corresponding request groups $QA_{11}\dots QA_{nz}$ (51) having the corresponding other queries $QQ_{1a}\dots QQ_{nz}$ (55) and the corresponding other server addresses $AQ_{1a}\dots AQ_{nz}$ (56), and the corresponding optional instructions $VJ_{11}\dots VJ_{nk}$ (52), also shown for a particular one of the user service and/or information requests iq_n (27) in FIG. 63.

The server PS (18) makes the requests $Q_{11}\dots Q_{nm}$ (29) thereof the servers $S_1\dots S_z$ (20), in accordance with the designation scheme which designates the certain ones of the servers $S_1\dots S_z$ (20) to be communicated with corresponding to the requests $Q_{11}\dots Q_{nm}$ (29) as the corresponding server designations $S_{11}\dots S_{nm}$ (30), as shown in FIG. 59, and certain ones of the clients $C_1\dots C_n$ (16) may additionally and/or alternatively make the requests $Q_{11}\dots Q_{nm}$ (29) thereof the servers $S_1\dots S_z$ (20), in accordance with the designation scheme which designates the certain ones of the servers $S_1\dots S_z$ (20) to be communicated with corresponding to the requests $Q_{11}\dots Q_{nm}$ (29) as the corresponding server designations $S_{11}\dots S_{nm}$ (30), as shown in FIG. 63.

The Searches per Group 326 and the Group 327 are used to formulate the current request group QA_{nc} (50) having the corresponding queries $QQ_{n1}\dots QQ_{nm}$ (53) and the

Each of the addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62) associated with the service and/or information request IQ_n has the pointers/addresses $PP_{n11} \dots PP_{nmr}$ (64) directed to address/point services and/or information therein the addressable response information groups $RG_{n1} \dots RG_{nm}$ (57), based upon the grouping and/or sorting criteria.

Information and/or services therein the addressable response information groups $RG_{n1} \dots RG_{nm}$ (57) is addressed therewith the pointers/addresses $PP_{n11} \dots PP_{nmr}$ (64) therefrom the query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62), and information and/or services therefrom the addressable response information groups $RG_{n1} \dots RG_{nm}$ (57) is incorporated thereinto the addressable query information groups $GI_{n1} \dots GI_{nz}$ (63) corresponding to the pointers/addresses $PP_{n11} \dots PP_{nmr}$ (64), which are formulated by the addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62), in accordance with the grouping and/or sorting criteria.

FIGS. 59 and 63 show the request pointer/address group QZ_n (60), the addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62), the pointers/addresses $PP_{n11} \dots PP_{nmr}$ (64), associated ones of the addressable response information groups $RG_{n1} \dots RG_{nm}$ (57), and the query information group GI_{nz} (63) associated therewith the query pointer/address group QG_{nz} (62). FIGS. 59 and 63 show the rth pointers/addresses $PP_{n1r} \dots PP_{nmr}$ (64), which point to the rth optional addressable pointer/address indices

$IN_{nmr} \dots IN_{nmr}$ (81) of the corresponding r th individual information groups
 $LG_{n1} \dots LG_{nmr}$ (80) of the addressable response information groups $RG_{n1} \dots RG_{nm}$
 (57) associated therewith the query pointer/address group QG_{nz} (62) and the associated
 query information group GI_{nz} (63).

5

FIG. 91 shows the request pointer/address group QZ_n (60), a particular one of the
 addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62), designated as the query
 pointer/address group QG_{nz} (62), the pointers/addresses $PP_{n11} \dots PP_{nmr}$ (64),
 associated ones of the addressable response information groups $RG_{n1} \dots RG_{nm}$ (57),
 10 and the query information group GI_{nz} (63) associated therewith the query
 pointer/address group QG_{nz} (62).

The addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62) each have
 corresponding ones of query information groups $GI_{n1} \dots GI_{nz}$ (63) associated therewith.

15 Each of the query information groups $GI_{n1} \dots GI_{nz}$ (63) have information and/or
 services therein, which are derived therefrom information and/or services obtained from
 the certain ones of the addressable response information groups $RG_{n1} \dots RG_{nm}$ (57),
 which are addressed to provide such information therewith the aid of the corresponding
 pointers/addresses $PP_{n11} \dots PP_{nmr}$ (64). Each of the pointers/addresses $PP_{n11} \dots PP_{nmr}$
 20 (64) are directed to point/address information and/or services therein the corresponding
 response information groups $RG_{n1} \dots RG_{nm}$ (57) associated therewith, which the
 information and/or services incorporated into the ones of the query information groups

$GI_{n1} \dots GI_{nz}$ (63) associated therewith the corresponding addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62) is obtained therefrom.

The addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62) may be used to aid in
5 formulating the query information groups $GI_{n1} \dots GI_{nz}$ (63), having information obtained the addressable response information groups RG_{nm} (57), resulting from certain ones of the queries $QQ_{n1} \dots QQ_{nm}$ (53) grouped one with the other and/or the associated ones of the corresponding server addresses $AQ_{n1} \dots AQ_{nm}$ (54). The query information groups $GI_{n1} \dots GI_{nz}$ (63) may be presented thereto the user U_n (12)
10 therethrough the user interface I_n (14). The addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62) may be derived therefrom query criteria in the optional instructions $VJ_{11} \dots VJ_{nk}$ (52) and/or using default criteria resident within the server PS (18) and/or the client C_n (16).

15 Query grouping criteria giving the user U_n (12) the ability to formulate the addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62) may be incorporated thereinto the optional instructions $VJ_{11} \dots VJ_{nk}$ (52), which may be entered thereinto the user interface I_n (14) therethrough the user input UI_n (25) by the user U_n (12). Typically, however, the queries $QQ_{n1} \dots QQ_{nm}$ (53) having the same and/or substantially the same
20 values are grouped one with the other therein individual ones of the addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62). Default criteria may be resident within the server PS (18) and/or the client C_n (16).

The size of the request pointer/address group **QZ_n** (60) and which particular ones of the queries **QQ_{n1}...QQ_{nm}** (53) and the corresponding ones of the server addresses **AQ_{n1}...AQ_{nm}** (54) to use therein the requests **Q_{n1}...Q_{nm}** (29), and thus construction and/or formulation of the addressable query pointer/address groups **QG_{n1}...QG_{nz}** (62)

5 to incorporate therein the particular request pointer/address group **QZ_n** (60), and, thus, delivery of information therein the query information groups **GI_{n1}...GI_{nz}** (63) is determined by the current request groups **QA_{1c}...QA_{nc}** (50), which may be determined from the Group 327 and the Searches per Group 326, the queries **QQ_{n1}...QQ_{nm}** (53) and the corresponding ones of the server addresses **AQ_{n1}...AQ_{nm}** (54) therein.

10

Certain ones of the queries **QQ_{n1}...QQ_{nm}** (53) may be grouped one with the other in the addressable query pointer/address groups **QG_{n1}...QG_{nz}** (62), which have the certain ones of the queries **QQ_{n1}...QQ_{nm}** (53) and the corresponding ones of the server addresses **AQ_{n1}...AQ_{nm}** (54) associated therewith, and the corresponding

15 pointers/addresses **PP_{n11}...PP_{nmr}** (64) associated therewith the certain ones of the queries **QQ_{n1}...QQ_{nm}** (53), the corresponding ones of the server addresses **AQ_{n1}...AQ_{nm}** (54), and certain ones of response information groups **RG_{n1}...RG_{nm}** (57).

20

Typical sorting and/or grouping criteria, for example, may group certain ones of the queries **QQ_{n1}...QQ_{nm}** (53) having the same and/or substantially the same values grouped therein a particular one of the query information groups **GI_{nz}...GI_{nz}** (63),

2025 RELEASE UNDER E.O. 14176

designated as the query information group \mathbf{GI}_{nz} (63), as shown in FIG. 92 and in certain ones of FIGS. 27-52.

Alternatively and/or additionally, other typical sorting and/or grouping criteria, for example, may group certain ones of the server addresses $\mathbf{AQ}_{n1} \dots \mathbf{AQ}_{nm}$ (54), having the same and/or substantially the same values grouped therein a particular one of the query information groups $\mathbf{GI}_{nz} \dots \mathbf{GI}_{nz}$ (63), designated as the query information group \mathbf{GI}_{nz} (63), as shown in FIG. 93.

10 FIGS. 91-93 show the r th pointers/addresses \mathbf{PP}_{ner} (64), \mathbf{PP}_{nrr} (64), and \mathbf{PP}_{nwr} (64), which point to the r th optional addressable pointer/address indices \mathbf{IN}_{ner} (81), \mathbf{IN}_{nrr} (81), and \mathbf{IN}_{nwr} (81) of the corresponding r th individual information groups \mathbf{LG}_{ner} (80), \mathbf{LG}_{nrr} (80), and \mathbf{LG}_{nwr} (80) of the addressable response information group s \mathbf{RG}_{ne} (57), \mathbf{RG}_{nr} (57), and \mathbf{RG}_{nw} (57) associated therewith the query pointer/address
15 group \mathbf{QG}_{nz} (62) and the associated query information group \mathbf{GI}_{nz} (63).

Alternatively and/or additionally, the user \mathbf{U}_n (12) may select query grouping criteria, which simply provides information to the user interface \mathbf{I}_n (14), separately with respect to the individual server addresses $\mathbf{AQ}_{n1} \dots \mathbf{AQ}_{nm}$ (54), as shown in FIGS. 60 and 64 and
20 in certain ones of FIGS. 27-52. For example, the query information groups $\mathbf{GI}_{n1} \dots \mathbf{GI}_{nz}$ (63), may alternatively and/or additionally be correspondingly associated with the server address $\mathbf{AQ}_{n1} \dots \mathbf{AQ}_{nm}$ (54), and, thus, may be correspondingly associated with the addressable response information group s $\mathbf{RG}_{n1} \dots \mathbf{RG}_{nm}$ (57). The query

information group **GI_{n1} (63)** may, thus, be associated therewith the server address **AQ_{n1} (54)**, the addressable response information group **RG_{n1} (57)**, and the query information group **GI_{n1} (63)**; the query information group **GI_{n2} (63)** may, thus, be associated therewith the server address **AQ_{n2} (54)**, the addressable response information group **RG_{n2} (57)**, and the query information group **GI_{n2} (63)**, and so on; and the query information group **GI_{nz} (63)** may, thus, be associated therewith the server address **AQ_{nz} (54)**, the addressable response information group **RG_{nz} (57)**, and the query information group **GI_{nz} (63)**, as shown in FIGS. 60 and 64. The process **104** of deriving the service and/or information response **IR_n (34)** and/or the user service and/or information response **ir_n (36)** for the grouping and/or sorting criteria of FIGS. 60 and 64 is shown in FIG. 70-1B.

The pointing/addressing scheme of FIGS. 60 and 64 is, of course, a much simpler pointing/addressing scheme than the pointing/addressing scheme of FIGS. 59 and 63, and does not require incorporating the addressable query pointer/address groups **QG_{n1}...QG_{nz} (62)** therein to the request pointer/address group **QZ_n (60)**. Each of the pointers/addresses **PF_{n11}...PF_{n1m} (69)**, of FIGS. 60 and 64, may then be directed to point/address the corresponding response information groups **RG_{n1}...RG_{nm} (57)** directly therefrom the request pointer/address group **QY_{ns} (68)**, to obtain information therefrom the corresponding response information groups **RG_{n1}...RG_{nm} (57)** and incorporation therein to corresponding ones of the corresponding query information groups **GI_{n1}...GI_{nz} (63)**, as shown in FIGS. 60 and 64. In this case, the addressable query pointer/address groups **QG_{n1}...QG_{nz} (62)** may be bypassed and/or eliminated

SECRET SHORTS

completely, thus simplifying the process. Of course, then, in this case, the resulting sorting and grouping is not as sophisticated, and allows for such simplification.

The above sorting criteria addressing schemes are meant only as typical examples of
5 sorting criteria addressing schemes that may be used. Yet other sorting criteria addressing schemes and/or combinations thereof may be used.

FIG. 94 shows typical ones of the addressable query pointer/address groups
QG_{n1}...QG_{nz} (62) having the typical ones of the queries **QQ_{n1}...QQ_{nm} (53)**, the
10 typical ones of the server addresses **AQ_{n1}...AQ_{nm} (54)**, and the corresponding ones of typical ones of the pointers/addresses **PP_{n11}...PP_{nmr} (64)** having the same ones of the queries **QQ_{n1}...QQ_{nm} (53)** grouped one with the other therein individual ones of the addressable query pointer/address groups **QG_{n1}...QG_{nz} (62)**.

15 More particularly, FIG. 94 shows the query pointer/address group **QG_{n1} (62)**, the query pointer/address group **QG_{n2} (62)**, and the query pointer/address group **QG_{n3} (62)**. The query pointer/address group **QG_{n1} (62)** of FIG. 94 has the same ones of the queries **QQ_{n1} (53)**, **QQ_{n2} (53)**, **QQ_{n3} (53)**, and **QQ_{n9} (53)**, the ones of the server addresses **AQ_{n1} (54)**, **AQ_{n2} (54)**, **AQ_{n3} (54)**, and **AQ_{n9} (54)**, and the ones of the
20 pointers/addresses **PP_{n1r} (64)**, **PP_{n2r} (64)**, **PP_{n3r} (64)**, and **PP_{n9r} (64)** associated therewith. The query pointer/address group **QG_{n2} (62)** of FIG. 94 has the same ones of the queries **QQ_{n4} (53)** and **QQ_{n7} (53)**, the ones of the server addresses **AQ_{n4} (54)** and **AQ_{n7} (54)** the ones of the pointer/addresses **PP_{n4r} (64)** and **PP_{n7r} (64)** associated

therewith. The query pointer/address group QG_{n3} (62) of FIG. 94 has the same ones of the query values QQ_{n5} (53), QQ_{n6} (53), and QQ_{n8} (53), the ones of the server addresses AQ_{n5} (54), AQ_{n6} (54), and AQ_{n8} (54) and the ones of the pointers/addresses PP_{n5r} (64), PP_{n6r} (64), and PP_{n8r} (64) associated therewith.

5

The addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62), however, may alternatively and/or additionally be grouped, for example, by the server addresses $AQ_{n1} \dots AQ_{nm}$ (54) and have the corresponding query values $QQ_{n1} \dots QQ_{nm}$ (53) associated therewith. Ones of the same and/or substantially the same ones of the server addresses $AQ_{n1} \dots AQ_{nm}$ (54), for example, having the corresponding queries $QQ_{n1} \dots QQ_{nm}$ (53) associated therewith may be used as the grouping criteria.

10

FIG. 95 shows another schematic representation of the typical ones of the addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62) having the typical ones of the queries $QQ_{n1} \dots QQ_{nm}$ (53), the typical ones of the server addresses $AQ_{n1} \dots AQ_{nm}$ (54), and the typical the ones of the pointer/addresses $PP_{n11} \dots PP_{nmr}$ (64) of FIG. 94 associated therewith.

15

FIG. 96 is a generic schematic representation of the addressable query pointer/address groups $QG_{n1} \dots QG_{nz}$ (62) having the queries $QQ_{n1} \dots QQ_{nm}$ (53), the server addresses $AQ_{n1} \dots AQ_{nm}$ (54), and the pointers/addresses $PP_{n11} \dots PP_{nmr}$ (64) associated therewith.

20

00000000000000000000

5 Certain information therein the addressable response information groups **RG_{n1}...RG_{nm}**
(57) may be associated with the corresponding queries **QQ_{n1}...QQ_{nm}** **(53)** and/or the
corresponding server addresses **AQ_{n1}...AQ_{nm}** **(54)** within the current request group
QA_{nc} **(50)**, and may optionally be used by the server **PS** **(18)** and/or the client **C_n** **(16)**.

10 Certain information therein the addressable response information groups **RG_{n1}...RG_{nm}**
(57) may also be incorporated therein the optional instructions **VJ_{n1}...VJ_{nk}** **(52)**.
Such information may be incorporated therein the optional instructions **VJ_{n1}...VJ_{nk}**
(52) may also be additionally and/or alternatively optionally resident within the server
PS **(18)** and/or the client **C_n** **(16)**.

J. COMMUNICATING THE REQUESTS TO THE SERVERS

15 The server **PS** **(18)** and/or the clients **C₁...C_n** **(16)** contact and open the connections
OC₁₁...OC_{nm} **(323)** with ones of the servers **S₁...S_z** **(20)**, according to the server
designations **S₁₁...S_{nm}** **(30)** at the corresponding server addresses **A₁₁...A_{nu}** **(265)** at
corresponding ports **W₁₁...W_{nm}** **(343)**. The server **PS** **(18)** and/or the clients **C₁...C_n**
(16) communicate the requests **Q₁₁...Q_{nm}** **(29)** of one or more of the same and/or
different ones of the servers **S₁...S_z** **(20)**, designated within the Group **327** and the
Searches per Group **326** to make the requests **Q₁₁...Q_{nc}** **(29)** thereof, in accordance
20 with the designation scheme corresponding to the corresponding ones of the server
designations **S₁₁...S_{nm}** **(30)**, corresponding to the requests **Q₁₁...Q_{nm}** **(29)**. If the

Group **327** is not specified and/or the Searches per Group **326** are not specified by the users **U₁...U_n (12)**, default values may additionally and/or alternatively values be used.

A particular one of the requests **Q₁₁...Q_{nm} (29)**, hereinafter designated as the request **Q_{nm} (29)**, corresponding to one request within the requests **Q_{n1}...Q_{nm} (29)** corresponding to the user **U_n (12)**, is shown schematically in FIG. 97.

Information **344** that may be used for formulating a typical particular one of the requests **Q_{nm} (29)** from the service and/or information request **IQ_n (28)**, and parsing, processing, and/or formatting the optional instructions **VJ_{n1}...VJ_{nk} (52)**, and opening the connection **OC_{nm} (323)** is shown in FIGS. 86-89.

Now, in more detail, the request **Q_{nm} (29)** may have a corresponding request line **L_{nm} (345)**, corresponding optional request header fields **JH_{n1}...JH_{ns} (346)**, and a corresponding optional entity body **EH_{nm} (347)**. The request line **L_{nm} (345)** may have a corresponding method **M_{nm} (348)**, a corresponding target resource **P_{nm} (349)**, which may have information associated with the corresponding query **QQ_{nm} (53)**, and corresponding protocol **B_{nm} (350)**.

The user **U_n (12)**, the server **PS (18)** and/or the client **C_n (16)** may optionally specify the port **W_{nm} (343)** to communicate the request **Q_{nm} (29)** therethrough, and/or the method **M_{nm} (348)**, and/or the protocol **B_{nm} (350)**. The port **W_{nm} (343)**, and/or the method **M_{nm} (348)**, and/or the protocol **B_{nm} (350)** may optionally be resident within

the server **PS (18)** and/or the client **C_n (16)**. Default values may also be used for the port **W_{nm} (343)** and/or the protocol **B_{nm} (350)**.

Typically, information within or from any and/or all or a portion of the queries **QQ_{nm} (53)** may be incorporated into the corresponding ones of the target resources **P_{11...P_{nm}}** (349) and/or the corresponding ones of the optional entity bodies **EH_{11...EH_{nm}}** (347), and may in certain instances depend upon the method **M_{11...M_{nm}}** (348).

However, information that may be used for opening the connections **OC_{11...OC_{nm}}** (323) and formulating the requests **Q_{11...Q_{nm}}** (29) from the service and/or information requests **IQ_{1...IQ_n}** (28) may be derived from any and/or all or a portion of the user client requests **QC_{11...QC_{nu}}** (280) accessible to the users **U_{1...U_n}** (12) and/or the hidden client requests **HC_{n1...HC_{nh}}** (281) hidden from the users **U_{1...U_n}** (12), and/or a combination thereof, and/or may also have information and/or instructions to be utilized by the server **PS (18)** and/or ones of the clients **C_{1...C_n}** (16).

Alternatively information from the alternate request links **QL_{11...QL_{na}}** (203), and/or the server request links **UL_{11...UL_{ns}}** (204), and/or the additional request links **SL_{11...SL_{nw}}** (71), and/or a combination thereof, may be used by the server **PS (18)** and/or ones of the clients **C_{1...C_n}** (16) to formulate the requests **Q_{11...Q_{nm}}** (29).

There may be **m** different or same ones of the requests **Q_{n1...Q_{nm}}** (29) from the client **C_n (16)** at any time, and **n x m** different and/or same ones of the requests **Q_{11...Q_{nm}}**

(29) of the same and/or different ones of the servers $S_1 \dots S_z$ (20) present on the network 24 at any time.

The queries $QQ_{n1} \dots QQ_{nm}$ (53) may each be different, one from the other, or the same.

5 The queries $QS_{n1} \dots QS_{nu}$ (288) accessible to the user U_n (12) may each be different, one from the other, or the same. The hidden queries $QH_{n1} \dots QH_{nh}$ (290) may each be different, one from the other, or the same. The number of the queries $QQ_{n1} \dots QQ_{nm}$ (53) "m" may be substantially the sum of the queries $QS_{n1} \dots QS_{nu}$ (288) accessible to the user U_n (12) and the hidden queries $QH_{n1} \dots QH_{nh}$ (290), i.e., $m = u + h$.

10

There may be m different or same ones of the queries $QQ_{n1} \dots QQ_{nm}$ (53) corresponding to the requests $Q_{n1} \dots Q_{nm}$ (29) from the client C_n (16) at any time, and $n \times m$ different and/or same ones of the queries $QQ_{11} \dots QQ_{nm}$ (53) corresponding to the requests $Q_{11} \dots Q_{nm}$ (29) of the same and/or different ones of the servers $S_1 \dots S_z$ (20) present on the network 24 at any time.

15

The server addresses $AQ_{n1} \dots AQ_{nm}$ (54) may each be different, one from the other, or the same. The server addresses $A_{n1} \dots A_{nu}$ (265) accessible to the user U_n (12) may each be different, one from the other, or the same. The hidden server addresses

20 $AH_{n1} \dots AH_{nh}$ (291) may each be different, one from the other, or the same. The number of the server addresses $AQ_{n1} \dots AQ_{nm}$ (54) "m" may be substantially the sum of the server addresses $A_{n1} \dots A_{nu}$ (265) accessible to the user U_n (12) and the hidden server addresses $AH_{n1} \dots AH_{nh}$ (291), i.e., $m = u + h$.

DEEBO SHREED

There may be m different or same ones of the server addresses $AQ_{n1} \dots AQ_{nm}$ (54) corresponding to the requests $Q_{n1} \dots Q_{nm}$ (29) from the client C_n (16) at any time, and $n \times m$ different and/or same ones of the server addresses $AQ_{11} \dots AQ_{nm}$ (54) corresponding to the requests $Q_{11} \dots Q_{nm}$ (29) of the same and/or different ones of the servers $S_1 \dots S_z$ (20) present on the network 24 at any time.

The optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) may each be different, one from the other, or the same. The optional instructions $V_{n1} \dots V_{nv}$ (289) accessible to the user U_n (12) may each be different, one from the other, or the same. The optional hidden instructions $H_{n1} \dots H_{ni}$ (292) may each be different, one from the other, or the same. The number of the optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) “k” may be substantially the sum of the optional instructions $V_{n1} \dots V_{nv}$ (289) accessible to the user U_n (12) and The optional hidden instructions $H_{n1} \dots H_{ni}$ (292), i.e., $k = v + i$.

There may be $m \times k$ different or same ones of the optional instructions $VJ_{n1} \dots VJ_{nk}$ (52) corresponding to the requests $Q_{n1} \dots Q_{nm}$ (29) from the client C_n (16) at any time, and $n \times m \times k$ different and/or same ones of the optional instructions $VJ_{11} \dots VJ_{nk}$ (52) corresponding to the requests $Q_{11} \dots Q_{nm}$ (29) of the same and/or different ones of the servers $S_1 \dots S_z$ (20) present on the network 24 at any time.

The requests $Q_{11} \dots Q_{nm}$ (29) of the servers $S_1 \dots S_z$ (20) may be made at the same and/or different times. One or more of the requests $Q_{11} \dots Q_{nm}$ (29) may be made of

each of the servers $S_1 \dots S_z$ (20) by the same/and or different ones of the clients $C_1 \dots C_n$ (16) and/or the server PS (18) at the same and/or different times.

The server PS (18) and/or the client C_n (16) may make one or more of the requests
5 $Q_{n1} \dots Q_{nm}$ (29) of the same and/or different ones of the servers $S_1 \dots S_z$ (20), in accordance with the designation scheme corresponding to the corresponding ones of the server designations $S_{n1} \dots S_{nm}$ (30), in order to fulfill the services and/or information requirements of the user U_n (12).

10 K. REPLIES FROM THE SERVERS

Each of the servers $S_1 \dots S_z$ (20) communicated therewith replies to the server PS (18) and/or the clients $C_1 \dots C_n$ (16), in accordance with the designation scheme which designates the servers $S_1 \dots S_z$ (20) being communicated with corresponding to the requests $Q_{11} \dots Q_{nm}$ (29) as the corresponding server designations $S_{11} \dots S_{nm}$ (30), and
15 communicates the corresponding responses $R_{11} \dots R_{nm}$ (32), associated therewith the requests $Q_{11} \dots Q_{nm}$ (29), to the server PS (18) and/or the clients $C_1 \dots C_n$ (16) making the requests $Q_{11} \dots Q_{nm}$ (29).

Now, ones of the servers $S_1 \dots S_z$ (20) having been contacted by the server PS (18)
20 and/or the clients $C_1 \dots C_n$ (16) and the connections opened $OC_{11} \dots OC_{nm}$ (323) therewith, corresponding to the requests $Q_{11} \dots Q_{nm}$ (29), according to the server designations $S_{11} \dots S_{nm}$ (30) at the corresponding server addresses $A_{11} \dots A_{nu}$ (265) at

the corresponding ports $W_{11}...W_{nm}$ (343) reply to the server **PS (18)** and/or the contacting clients $C_1...C_n$ (16) with the corresponding responses $R_{11}...R_{nm}$ (32).

A particular one of the responses $R_{n1}...R_{nm}$ (32), hereinafter designated as the
5 response R_{nm} (32), corresponding to one response within the responses $R_{n1}...R_{nm}$
(32), the response R_{nm} (32) corresponding to the request Q_{nm} (29), and the responses
 $R_{n1}...R_{nm}$ (32) corresponding to the requests $Q_{n1}...Q_{nm}$ (29), is shown schematically
in FIG. 98.

10 Now, the response R_{nm} (32) may have a corresponding response header line LR_{nm}
(351), corresponding optional response header fields $JR_{n1}...JR_{nt}$ (352), and a
corresponding optional entity body RH_{nm} (353). The optional entity body RH_{nm} (353)
typically has links, and/or descriptions, and/or other information. The request header
line LR_{nm} (351) may have a corresponding protocol BR_{nm} (354), a corresponding
15 status SR_{nm} (355), and a corresponding status explanation SE_{nm} (356).

Ones of the connections may be closed after ones of the responses $R_{11}...R_{nm}$ (32) are
communicated to the **PS (18)** and/or to the requesting corresponding ones of the clients
 $C_1...C_n$ (16).

20

Again, the Timeout per Search Engine **329** is considered to be substantially the
maximum time for the server **PS (18)** and/or the particular client C_n (16) making the
requests $Q_{n1}...Q_{nm}$ (29) to wait for each of the responses $R_{n1}...R_{nm}$ (32) therefrom

certain ones of the servers $S_1 \dots S_z$ (20), in accordance with the designation scheme which designates the certain ones of the servers $S_1 \dots S_z$ (20) to be communicated with corresponding to the requests $Q_{11} \dots Q_{nm}$ (29) as the corresponding server designations $S_{11} \dots S_{nm}$ (30).

5

If certain ones of the servers $S_1 \dots S_z$ (20) do not open connections $OC_{11} \dots OC_{nm}$ (323) therewith and/or communicate the responses $R_{11} \dots R_{nm}$ (32) thereto the server PS (18) and/or the clients $C_1 \dots C_n$ (16), and/or if certain other ones of the servers $S_1 \dots S_z$ (20) do not communicate the responses $R_{11} \dots R_{nm}$ (32) thereto the server PS (18) and/or

10

the clients $C_1 \dots C_n$ (16) once connections therewith may have been opened $OC_{11} \dots OC_{nm}$ (323), corresponding to the requests $Q_{11} \dots Q_{nm}$ (29), according to the server designations $S_{11} \dots S_{nm}$ (30), within the timeout set by the Timeout per Search Engine 329, the certain ones of requests $Q_{n1} \dots Q_{nm}$ (29) of such nonresponding ones of the servers $S_1 \dots S_z$ (20) may then be cancelled by the server PS (18) and/or the clients

15

$C_1 \dots C_n$ (16). Information about such ones of the nonresponding ones of the servers $S_1 \dots S_z$ (20) may then be communicated therefrom the server PS (18) and/or the clients $C_1 \dots C_n$ (16) therethrough the corresponding ones of the user interfaces $I_1 \dots I_n$ (14) thereto the corresponding ones of the users $U_1 \dots U_n$ (12), according to the server designations $S_{11} \dots S_{nm}$ (30) corresponding to the certain ones of requests $Q_{n1} \dots Q_{nm}$

20

(29) of such nonresponding ones of the servers $S_1 \dots S_z$ (20).

In certain instances, the server PS (18) and/or certain ones of the clients $C_1 \dots C_n$ (16) may contact certain ones of the servers $S_1 \dots S_z$ (20) and open the connections

000004207300

$OC_{11}...OC_{nm}$ (323) therewith, corresponding to the requests $Q_{11}...Q_{nm}$ (29),
according to the server designations $S_{11}...S_{nm}$ (30), one or more additional times, in
order to satisfy the needs of the users $U_1...U_n$ (12), and/or certain requirements within
the optional instructions $VJ_{n1}...VJ_{nk}$ (52), such as, for example, the URL's per Search
5 Engine 330, and/or as a result of certain information communicated to the PS (18)
and/or certain ones of the clients $C_1...C_n$ (16) within the responses $R_{11}...R_{nm}$ (32).

If, for example, less links, and/or descriptions, and/or prices/values, and/or images are
returned within certain ones of the responses $R_{11}...R_{nm}$ (32), which may be considered
10 to be first ones of the responses $R_{11}...R_{nm}$ (32), than are requested by certain ones of
the users $U_1...U_n$ (12) within certain ones of the URL's per Search Engine 330, the
server PS (18) and/or certain ones of the clients $C_1...C_n$ (16) may contact certain ones
of the servers $S_1...S_z$ (20), open the connections $OC_{11}...OC_{nm}$ (323) therewith, and
make additional ones of the requests $Q_{11}...Q_{nm}$ (29), according to the server
15 designations $S_{11}...S_{nm}$ (30), one or more additional times, in order to satisfy the needs
of the users $U_1...U_n$ (12). The links, and/or the descriptions, and/or the images
returned within and/or parsed therefrom additional ones of the responses $R_{11}...R_{nm}$
(32) thereto the additional ones of the requests $Q_{11}...Q_{nm}$ (29) may then be appended
thereto the corresponding ones of the links, and/or the corresponding ones of the
20 descriptions, and/or the corresponding ones of the images returned within and parsed
therefrom the first ones of the responses $R_{11}...R_{nm}$ (32)

The servers **S₁...S_z (20)** communicate the responses **R₁₁...R_{nm} (32)** to the requests **Q₁₁...Q_{nm} (29)** thereto the server **PS (18)** and/or specific ones of the clients **C₁...C_n (16)**, in accordance with the designation scheme corresponding to the corresponding ones of the server designations **S₁₁...S_{nm} (30)**. Alternatively, and/or additionally, in certain instances, certain ones of the servers **S₁...S_z (20)**, corresponding to certain ones of the server designations **S₁₁...S_{nm} (30)**, may request additional information of the server **PS (18)** and/or specific ones of the clients **C₁...C_n (16)**, prior to communicating the responses **R₁₁...R_{nm} (32)** to the requests **Q₁₁...Q_{nm} (29)**. Upon receiving such additional information from the server **PS (18)** and/or the specific ones of the clients

10 **C₁...C_n (16)**, the certain ones of the servers **S₁...S_z (20)**, corresponding to the certain ones of the server designations **S₁₁...S_{nm} (30)**, may then communicate the responses **R₁₁...R_{nm} (32)** to the requests **Q₁₁...Q_{nm} (29)** thereto the server **PS (18)** and/or the specific ones of the clients **C₁...C_n (16)**.

15 In such certain instances, in more detail, the server **PS (18)** and/or certain ones of the clients **C₁...C_n (16)** may contact certain ones of the servers **S₁...S_z (20)** and open the connections **OC₁₁...OC_{nm} (323)** therewith, corresponding to the requests **Q₁₁...Q_{nm} (29)**, according to the server designations **S₁₁...S_{nm} (30)**, one or more additional times, as a result of certain information communicated to the **PS (18)** and/or certain ones of

20 the clients **C₁...C_n (16)** within the responses **R₁₁...R_{nm} (32)**, such as, for example, information obtained from and/or parsed from the responses **R₁₁...R_{nm} (32)**. This information is typically within certain ones of the response header fields **JR₁₁...JR_{nt}**

(352), but may also be within the corresponding optional entity bodies $RH_{11} \dots RH_{nm}$ (353) and/or the corresponding response header lines $LR_{11} \dots LR_{nm}$ (351).

Now, in such certain instances, the certain ones of the servers $S_1 \dots S_z$ (20) request the information from the server PS (18) and/or certain ones of the clients $C_1 \dots C_n$ (16), prior to communicating the responses $R_{11} \dots R_{nm}$ (32) thereto the server PS (18) and/or the certain ones of the clients $C_1 \dots C_n$ (16). The server PS (18) and/or the certain ones of the clients $C_1 \dots C_n$ (16) being requested such information may then respond to the requests for such information, by communicating the requested information to the ones of the requesting servers $S_1 \dots S_z$ (20). Upon receipt of the requested information at the ones of the requesting servers $S_1 \dots S_z$ (20), the requesting ones of the servers $S_1 \dots S_z$ (20) reply thereto the server PS (18) and/or the certain ones of the clients $C_1 \dots C_n$ (16) with the responses $R_{11} \dots R_{nm}$ (32). Such requests for information from the servers $S_1 \dots S_z$ (20) may occur not at all, and/or one or more times.

15

L. PARSING, PROCESSING, FORMATTING, SORTING, GROUPING, AND

ORGANIZING RESPONSES INTO SERVICE AND/OR INFORMATION RESPONSES

A particular one of the optional entity bodies $RH_{11} \dots RH_{nm}$ (353), designated as the entity body RH_{nm} (353), of a particular one of the responses $R_{11} \dots R_{nm}$ (32), designated as the response R_{nm} (32), may have optional response individual information groups $LS_{nm1} \dots LS_{nmr}$ (360) and optional information LI_{nm} (361), as shown in FIG. 99.

20080101

Each of the optional response individual information groups **LS_{nm1}...LS_{nmr} (360)** may have and/or be parsed into corresponding optional response links **LK_{nm1}...LK_{nmr} (362)**, and/or corresponding optional response descriptions **DK_{nm1}...DK_{nmr} (363)**,
 5 and/or corresponding optional response prices/values **PK_{nm1}...PK_{nmr} (364)**, and/or corresponding optional response images **IK_{nm1}...IK_{nmr} (365)**, as shown in FIG. 99.

The optional response links **LK_{nm1}...LK_{nmr} (362)**, the corresponding optional response descriptions **DK_{nm1}...DK_{nmr} (363)**, the corresponding optional response prices/values
 10 **PK_{nm1}...PK_{nmr} (364)**, and the corresponding optional response images **IK_{nm1}...IK_{nmr} (365)**, corresponding to the optional response individual information groups **LS_{nm1}...LS_{nmr} (360)** are typically associated correspondingly one with the other.

The optional response link **LK_{nm1} (362)**, the corresponding optional response
 15 description **DK_{nm1} (363)**, the corresponding optional response price/value **PK_{nm1} (364)**, and the corresponding optional response image **IK_{nm1} (365)**, corresponding to the optional response individual information group **LS_{nm1} (360)** are typically associated correspondingly one with the other. The optional response link **LK_{nm2} (362)**, the corresponding optional response description **DK_{nm2} (363)**, the
 20 corresponding optional response price/value **PK_{nm2} (364)**, and the corresponding optional response image **IK_{nm2} (365)**, corresponding to the optional response individual information group **LS_{nm2} (360)** are typically associated correspondingly one with the other, and so on. The optional response link **LK_{nmr} (362)**, the corresponding optional

00000 000000

response description DK_{nmr} (363), the corresponding optional response price/value PK_{nmr} (364), and the corresponding optional response image IK_{nmr} (365), corresponding to the optional response individual information group LS_{nmr} (360) are, thus, typically associated correspondingly one with the other.

5

The optional information LI_{nm} (361) may have additional links, and/or additional descriptions, and/or additional images, and/or prices/values, and/or other information, and/or services, and/or media, all and/or a portion of which may be used and/or discarded by the server PS (18) and/or the clients $C_1 \dots C_n$ (16). The optional information LI_{nm} (361) is typically filtered from the optional entity body RH_{nm} (353) and discarded, and/or other unwanted information and/or media is also typically filtered from the response R_{nm} (32), and/or the optional entity body RH_{nm} (353), and discarded.

10

15

The optional response individual information groups $LS_{nm1} \dots LS_{nmr}$ (360) are typically parsed and/or processed and/or formatted therefrom the entity body RH_{nm} (353) of the response R_{nm} (32), and/or parsed, and/or processed, and/or formatted, and/or organized, and/or grouped therein into the addressable individual information groups $LG_{nm1} \dots LG_{nmr}$ (80) of the addressable response information group RG_{nm} (57), correspondingly associated therewith the response R_{nm} (32), as shown in FIGS.

20

100 and 101.

FIG. 100 shows the addressable response information group **RG_{nm} (57)** having the
 addressable individual information groups **LG_{nm1}...LG_{nmr} (80)** parsed, and/or
 processed, and/or formatted, and/or organized, and/or grouped thereinto the addressable
 response information group **RG_{nm} (57)** therefrom the optional entity body **RH_{nm}**
 5 **(353)** of FIG. 99.

FIG. 101 shows a particular one of the optional response individual information groups
LS_{nm1}...LS_{nmr} (360), designated as the optional response individual information group
LS_{nmr} (360), parsed, and/or processed, and/or formatted, and/or organized, and/or
 10 grouped thereinto a particular one of the addressable individual information groups
LG_{nm1}...LG_{nmr} (80), designated as the addressable individual information group
LG_{nmr} (80).

The addressable individual information groups **LG_{nm1}...LG_{nmr} (80)** are typically
 15 parsed, and/or processed, and/or formatted for consistency of presentation and/or
 appearance one with the other, as the addressable individual information groups
LG_{nm1}...LG_{nmr} (80) are incorporated thereinto the addressable response information
 group s **RG_{n1}...RG_{nm} (57)** therefrom the responses **R_{n1}...R_{nm} (32)**.

20 Alternatively and/or additionally the addressable individual information groups
LG_{nm1}...LG_{nmr} (80) may be incorporated thereinto the addressable response
 information group s **RG_{n1}...RG_{nm} (57)** therefrom the responses **R_{n1}...R_{nm} (32)** in an
 as-is condition and/or in raw form.

00000 00000 00000

the other. Alternatively and/or additionally the optional prices/values $PD_{nm1} \dots PD_{nmr}$ (84) may be retained in an as-is condition and/or in raw form.

Each of the optional images $ID_{nm1} \dots ID_{nmr}$ (85) are also typically parsed, and/or
5 processed, and/or formatted for consistency of presentation and/or appearance one with the other. Alternatively and/or additionally the optional images $ID_{nm1} \dots ID_{nmr}$ (85) may be retained in an as-is condition and/or in raw form.

The optional links $LD_{nm1} \dots LD_{nmr}$ (82), and/or the optional descriptions
10 $DD_{nm1} \dots DD_{nmr}$ (83), and/or the optional prices/values $PD_{nm1} \dots PD_{nmr}$ (84), and/or the optional images $ID_{nm1} \dots ID_{nmr}$ (85), correspondingly associated therewith the response R_{nm} (32), may additionally and/or alternatively be parsed individually and/or separately, and incorporated therein to the addressable response information group RG_{nm} (57) therefrom the optional entity body RH_{nm} (353), as shown in FIG. 102.

15 The response header line LR_{nm} (351) and/or the optional response header fields $JR_{n1} \dots JR_{nt}$ (352) may also have information, which the server PS (18) and/or the clients $C_1 \dots C_n$ (16) may use.

20 The optional information LI_{nm} (361) and/or certain information and/or media within the response R_{nm} (32), particularly within the optional entity body RH_{nm} (353), may be optionally used by the server PS (18) and/or the clients $C_1 \dots C_n$ (16), and/or

optionally incorporated thereto the addressable response information group **RG_{nm}** (57).

Each of the optional response individual information groups **LS_{nm1}...LS_{nmr}** (360) therefrom each of the responses **R_{n1}...R_{nm}** (32) may be compared one with the other, and duplicate ones of the of the optional response individual information groups **LS_{nm1}...LS_{nmr}** (360) may be discarded.

Alternatively and/or additionally, each of the optional addressable individual information groups **LG_{n11}...LG_{nmr}** (80) therefrom each of the addressable response information groups **RG_{n1}...RG_{nm}** (57) may be compared one with the other, and duplicate ones of the optional addressable individual information groups **LG_{n11}...LG_{nmr}** (80) may be discarded.

Each of the optional response individual information groups **LS₁₁₁...LS_{nmr}** (360) and/or portions thereof therefrom the entity bodies **RH₁₁...RH_{nm}** (353) of the responses **R₁₁...R_{nm}** (32) may also be optionally compared one with the other, and duplicate ones of the of the optional response individual information groups **LS₁₁₁...LS_{nmr}** (360) may be optionally discarded.

Alternatively and/or additionally, each of the optional links **LK_{n11}...LK_{nmr}** (362), and/or the optional descriptions **DK_{n11}...DK_{nmr}** (363), and/or the optional prices/values **PD_{nm1}...PD_{nmr}** (365), and/or the optional images **IK_{n11}...IK_{nmr}** (365).

therefrom each of the responses $R_{n1}...R_{nm}$ (32) may be compared one with the other of like kind, and duplicate ones of the optional links $LK_{n11}...LK_{nmr}$ (362), and/or the optional descriptions $DK_{n11}...DK_{nmr}$ (363), and/or the optional prices/values $PK_{nm1}...PK_{nmr}$ (364), and/or the optional images $IK_{n11}...IK_{nmr}$ (364), and/or a combination thereof may be discarded.

Alternatively and/or additionally, each of the optional links $LD_{n11}...LD_{nmr}$ (82), and/or the optional descriptions $DD_{n11}...DD_{nmr}$ (83), and/or the optional prices/values $PD_{nm1}...PD_{nmr}$ (84), and/or the optional images $ID_{n11}...ID_{nmr}$ (85) therefrom each of the addressable response information groups $RG_{n1}...RG_{nm}$ (57) may be compared one with the other of like kind, and duplicate ones of the optional links $LD_{n11}...LD_{nmr}$ (82), and/or the optional descriptions $DD_{n11}...DD_{nmr}$ (83), and/or the optional prices/values $PD_{nm1}...PD_{nmr}$ (85), and/or the optional images $ID_{n11}...ID_{nmr}$ (85), and/or a combination thereof may be discarded.

The optional links $LK_{n11}...LK_{nmr}$ (362) are typically compared one with the other, and duplicate ones of the corresponding optional links $LK_{n11}...LK_{nmr}$ (362), and/or the corresponding optional descriptions $DK_{n11}...DK_{nmr}$ (363), and/or the corresponding optional images $IK_{n11}...IK_{nmr}$ (364), and/or the corresponding optional prices/values $PK_{nm1}...PK_{nmr}$ (365) are discarded, leaving only one of any ones of the duplicate optional links $LK_{n11}...LK_{nmr}$ (362) and/or the corresponding optional descriptions $DK_{n11}...DK_{nmr}$ (363), and/or the corresponding optional images $IK_{n11}...IK_{nmr}$ (364), and/or the optional prices/values $PK_{nm1}...PK_{nmr}$ (365) remaining.

000000000000000000

The optional prices/values $PD_{nm1}\dots PD_{nmr}$ (84) and/or the corresponding optional links $LD_{n11}\dots LD_{nmr}$ (82) and/or the corresponding optional descriptions $DD_{n11}\dots DD_{nmr}$ (83), and/or the corresponding optional images $ID_{n11}\dots ID_{nmr}$ (85) may be sorted with
5 respect to the optional prices/values $PD_{nm1}\dots PD_{nmr}$ (84), in accordance with sorting criteria in the optional instructions $VJ_{n1}\dots VJ_{nk}$ (52) and/or in accordance with default criteria resident within the server PS (18) and/or the client C_n (16).

The optional links $LD_{n11}\dots LD_{nmr}$ (82), and/or the corresponding optional descriptions $DD_{n11}\dots DD_{nmr}$ (83), and/or the corresponding optional prices/values $PD_{nm1}\dots PD_{nmr}$ (84), and/or the corresponding optional images $ID_{n11}\dots ID_{nmr}$ (85) may be sorted, for
10 example, in ascending order with respect to the optional prices/values $PD_{nm1}\dots PD_{nmr}$ (84) having the lowest price therein being presented to the user U_n (12) at the user interface I_n (14) first and the highest price therein last.

Alternatively and/or additionally, the optional links $LD_{n11}\dots LD_{nmr}$ (82), and/or the corresponding optional descriptions $DD_{n11}\dots DD_{nmr}$ (83), and/or the corresponding optional prices/values $PD_{nm1}\dots PD_{nmr}$ (84), and/or the corresponding optional images $ID_{n11}\dots ID_{nmr}$ (85) may be sorted, for example, in ascending or descending alphabetical
15 order with respect to the optional links $LD_{n11}\dots LD_{nmr}$ (82) and/or the corresponding optional descriptions $DD_{n11}\dots DD_{nmr}$ (83) being presented to the user U_n (12) at the user interface I_n (14).
20

00000 01200000

information groups **RL_{nz1}...RL_{nzx} (92)**, the optional query description **QT_{nz} (93)**, the optional server descriptions and/or links **ST_{nz1}...ST_{nzf} (94)**, and the optional advertisements and/or links **LT_{nz1}...LT_{nzf} (95)** incorporated therein certain typical ones of the typical service and/or information response forms **IS_n (39)** of FIGS. 27-52.

5

The client-server multitasking system **10** of the present invention, the client-server multitasking process **99**, and the multitasking process **104**, the server **PS (18)** and/or the clients **C₁...C_n (16)**, then, are capable of retrieving, parsing, processing, formatting, organizing, grouping, sorting, and consolidating services and/or information therefrom the same and/or different ones of the servers **S₁...S_z (20)**, and/or the optional servers **SO₁...SO_p (22)**, and/or the clients **C₁...C_n (16)**, having the same and/or different structures, formats, organizations, groupings, and/or data structures, and incorporating the parsed, processed, formatted, organized, grouped, sorted, and consolidated services and/or information therein to the user responses **UR₁...UR_n (37)** for delivery to the user interfaces **I₁...I_n (14)** and use by the users **U₁...U_n (12)**.

15

The client-server multitasking system **10** of the present invention, the client-server multitasking process **99**, and the multitasking process **104**, the server **PS (18)** and/or the clients **C₁...C_n (16)**, then, are capable of retrieving, parsing, processing, formatting, organizing, grouping, sorting, and consolidating services and/or information therefrom the same and/or different ones of each of the optional response individual information groups **LS₁₁₁...LS_{nmr} (360)**, and/or the optional response links **LK₁₁₁...LK_{nmr} (362)**, and/or the optional response descriptions **DK₁₁₁...DK_{nmr} (363)**, and/or the optional

20

US 2002/0142050

response prices/values $PK_{111}\dots PK_{nmr}$ (364), and/or the optional response images $IK_{nm1}\dots IK_{nmr}$ (365) therefrom the entity bodies $RH_{11}\dots RH_{nm}$ (353) of the responses $R_{11}\dots R_{nm}$ (32), having the same and/or different structures, formats, organizations, groupings, and/or data structures, and incorporating the parsed, processed, formatted, organized, grouped, sorted, and consolidated services and/or information thereinto the user responses $UR_1\dots UR_n$ (37) for delivery to the user interfaces $I_1\dots I_n$ (14) and use by the users $U_1\dots U_n$ (12).

10 **M. ADDITIONAL FEATURES AND/OR OTHER CONSIDERATIONS**

The present invention is directed to a client-server multitasking system and process capable of information and/or service retrieval from the same and/or different ones of servers substantially simultaneously and on-the-fly, using the same and/or different ones of queries of the same and/or different ones of the servers, and sorting, grouping, and/or organizing responses therefrom substantially on-the-fly, and communicating service and/or information responses to the requestors and/or users substantially simultaneously and on-the-fly. The client-server multitasking system and process is capable of use on a variety of networks, such as global area networks, and in particular the internet, metropolitan area networks, wide area networks, and local area networks, and be capable of searching search engines and/or other sites substantially simultaneously and on-the-fly.

15
20

The client-server multitasking system and process is capable of retrieving substantially multiple simultaneous services and/or information having the same and/or different criteria from the same and/or different servers, sorting, grouping, and/or organizing the responses from the servers and/or the clients into information and/or services responses, and communicating the service and/or information responses to the requestors and/or the users substantially simultaneously. The same and/or different ones of uniform resource locators, target resources, and/or paths may be used.

The requestors and/or users are capable of making multiple simultaneous searches. The searches may have at least one or a plurality of same or different queries of the same and/or different servers and/or clients. The responses from the servers and/or the clients may be of being organized into the service and/or information response in a variety of formats. The responses may be sorted within the service and/or information response, such as, for example, by category, query, group, page, order of importance, ascending and/or descending order, alphabetically and/or numerically, or other characteristics, as determined by the requestor, and/or the user, and/or the client-server multitasking system, and/or the responses may be combined within the service and/or information response, such as, for example, interleaving the responses one with the other, such as, for example, by order of relevance or other parameters. The responses may also be capable of being grouped by search criteria, server, order of importance, or by numerical factors such as value, price, or other numerical quantifier. For example, the responses may be presentable, for example, in ascending or descending order in interleaved format, such as top ones, twos, threes, and so on, or presentable separately

to the requestor and/or the user. The order may be order of importance or relevance related, or, for example, numerically valued, such as price or stock market value.

The client-server multitasking system and process is be capable of information and/or
5 service retrieval from the same and/or different ones of the servers substantially simultaneously and on-the-fly, using the same and/or different ones of the queries, and sorting, grouping, and/or organizing responses therefrom substantially on-the-fly.

The client-server multitasking system and process is capable of substantially multiple
10 simultaneous searching, using the same and/or different ones of queries of the same and/or different ones of the clients and/or servers, which may be search engines, and/or sites, and/or servers, and/or locations on the network, and additionally and/or alternatively building a client-server multitasking search engine and/or database. The client-server multitasking search engine and/or database is capable of storing the
15 information and/or services retrieved therefrom the search engines, and/or sites, and/or servers, and/or locations being queried on the network therein, and building the client-server search engine and/or database. The client-server multitasking search engine should is also capable of being queried either directly and/or in combination therewith the substantially simultaneous searching, using the same and/or different queries of the
20 same and/or different search engines, sites, servers, and/or databases. The client-server multitasking search engine and/or database should is also capable of updating information and/or services stored therein by querying sites, servers, search engines,

and/or databases containing information and/or services referenced in client-server multitasking search engine and/or database.

The client-server multitasking system and process is also capable of use on a variety of networks, such as global area networks, and in particular the internet, metropolitan area networks, wide area networks, and local area networks.

The client-server multitasking system and process are capable of substantially simultaneous searching of the same and/or different ones of search engines and/or sites on the network substantially on-the-fly, with the same and/or different ones of the queries, and sorting, grouping, and/or organizing responses therefrom substantially on-the-fly.

The client-server multitasking system and process are also capable of sorting, grouping, and/or organizing results therefrom the servers, search engines, and/or sites, in accordance with instructions from the requestors and/or the users, and/or instructions resident within the client-server multitasking system and/or process. The client-server multitasking system and process are also capable drilling down and/or up to different levels within the search engines, sites, and/or servers being queried.

The client-server multitasking system and process are capable of providing manual and/or timed updates. Such timed updates allow for motion related presentation to the requestor and/or the user.

same and/or different sites with updates every few seconds and/or minutes; obtaining prices and/or values in different stock markets substantially simultaneously; and searching for jobs on the same and/or different job sites, using the same and/or different job criteria, for example, on a daily basis, the job sites having changing job availability; 5 and/or a combination thereof, all substantially simultaneously. The client-server multitasking system is capable of presenting information and/or services for review and/or updating from the same and/or different ones of sites, servers, and/or applications substantially simultaneously, and trend analysis thereof, using a variety of sorting, grouping and/or organizing criteria, according to the needs of the requestor, 10 and/or the user, and/or resident within the client-server multitasking system.

The client server-multitasking system and process are capable of service and/or information retrieval from at least one server, organization, communication, and presentation of such services and/or information to at least one requestor and/or user, 15 and/or optional storage, and/or retrieval of such services and/or information from the optional storage. The client-server multitasking system and process are capable of building a client-server multitasking system search engine and/or database therefrom responses returned from the servers, search engines, and/or sites being queried and/or searched, and/or having requests made thereof. The client-server multitasking system 20 search engine and/or database having stored information and/or services therein are also searchable, are capable of full text searches thereof, and are searchable by the servers and/or the clients on the network, either separately and/or in combination therewith the substantially simultaneous multiple same and/or different searches and/or queries of the

same and/or different servers on the network. Information therein the client-server multitasking system search engine and/or database are also searchable and/or retrievable, and are capable of being incorporated therein the service and/or information responses delivered thereto the user interfaces, according to search criteria, selectively and/or automatically, by the requestor and/or the user. The client-server multitasking system search engine and/or database are capable of spidering, and/or roboting, and/or querying sites, services and/or information to be stored therein and/or stored therein the client-server multitasking system search engine and/or database, and updating the services and/or information to be stored and/or stored therein the client-server multitasking system search engine and/or database.

The client-server multitasking system and process, then, are capable of information and/or service retrieval from the same and/or different ones of servers substantially simultaneously and on-the-fly, using the same and/or different ones of queries of the same and/or different ones of the servers, and sorting, grouping, and/or organizing responses therefrom substantially on-the-fly, and communicating service and/or information responses to the requestors and/or users substantially simultaneously and on-the-fly. The client-server multitasking system and process are capable of use on a variety of networks, such as global area networks, and in particular the internet, metropolitan area networks, wide area networks, and local area networks, and are capable of searching search engines and/or other sites substantially simultaneously and on-the-fly. The client-server multitasking system and process are capable of sorting, grouping, and/or organizing results therefrom the servers, search engines, and/or sites,

in accordance with instructions from the requestors, and/or users, and/or instructions resident within the client-server multitasking system and/or process. The client-server multitasking system are capable of use in a variety of applications, and capable of information comparison and/or trend analysis of information from the same and/or
5 different sources substantially simultaneously. The client-server multitasking system and process are capable of building a client-server multitasking system search engine and/or database therefrom responses returned from the servers, search engines, and/or sites being queried and/or searched, and/or having requests made thereof, is capable of being searched and/or queried, querying sites referenced therein the client-server
10 multitasking system search engine and/or database, and updating information and/or services stored therein.

The client-server multitasking system and process are capable of retrieving, parsing, processing, formatting, organizing, grouping, sorting, and consolidating services and/or
15 information therefrom the same and/or different ones of the servers and/or clients having the same and/or different structures, formats, organizations, groupings, and/or data structures, and incorporating the parsed, processed, formatted, organized, grouped, sorted, and consolidated services and/or information thereinto user responses for delivery to and use by the requestors and/or users.

20

The client-server multitasking system **10** of the present invention, the client-server multitasking process **99**, and the multitasking process **104**, the server **PS (18)** and/or the clients **C₁...C_n (16)**, then, are capable of retrieving, parsing, processing, formatting,

organizing, grouping, sorting, and consolidating services and/or information therefrom the same and/or different ones of the servers **S₁...S_z (20)**, and/or the optional servers **SO₁...SO_p (22)**, and/or the clients **C₁...C_n (16)**, having the same and/or different structures, formats, organizations, groupings, and/or data structures, and incorporating
 5 the parsed, processed, formatted, organized, grouped, sorted, and consolidated services and/or information thereinto the user responses **UR₁...UR_n (37)** for delivery to the user interfaces **I₁...I_n (14)** and use by the users **U₁...U_n (12)**.

The client-server multitasking system **10** of the present invention, the client-server
 10 multitasking process **99**, and the multitasking process **104**, which in itself is a process, the user interfaces **I₁...I_n (14)**, and/or the clients **C₁...C_n (16)**, and/or the server **PS (18)**, and/or the servers **S₁...S_z (20)**, and/or the optional servers **SO₁...SO_p (22)** may be constructed of hardware, firmware, software, machines, and/or operating systems, and/or combinations thereof, and/or other suitable means, and/or other components
 15 and/or systems, and/or combinations thereof. Such hardware, firmware, software, machines, and/or operating systems, and/or combinations thereof, other components and/or systems, and/or other suitable means, and/or combinations thereof may have therein and/or be resident therein, but are not limited to computer components and/or systems, television and/or telecommunications components and/or systems, merger of
 20 television and computer systems, and/or merger of television and/or computer and/or telecommunications systems, networks, simulators, interactive technologies and/or systems, cybernetics and/or cybernetic systems, and/or combinations thereof.

00000 00000 00000

The clients **C₁...C_n (16)**, the server **PS (18)**, the servers **S₁...S_z (20)**, and/or the optional servers **SO₁...SO_p (22)** may be search engines, and/or sites, and/or servers, and/or clients, and/or URL's, and/or databases, and/or locations on the network, and/or other suitable components and/or systems, and/or other suitable means, and/or

5 combinations thereof, which may be capable of communicating on the network **24**. The scope of the client-server multitasking system **10** of the present invention, the client-server multitasking process **99**, and the multitasking process **104**, however, is not limited to search engines, and/or sites, and/or servers, and/or clients, and/or URL's, and/or databases, and/or locations on the network, and/or other suitable components

10 and/or systems, and/or other suitable means, and/or combinations thereof, which may be capable of communicating on the network **24**, as it is recognized that other components, systems, technologies, and/or operating systems exist and/or emerge that may make use of the benefits of the present invention, and are either on the horizon and/or are recognized to be forthcoming.

15 The client-server multitasking system **10** of the present invention, the client-server multitasking process **99**, and the multitasking process **104**, which in itself is a process, the user interfaces **I₁...I_n (14)**, and/or the clients **C₁...C_n (16)**, and/or the server **PS (18)**, and/or the servers **S₁...S_z (20)**, and/or the optional servers **SO₁...SO_p (22)**, may

20 then be hardware, firmware, software, and/or machines, and/or operating systems, and/or other suitable means, and/or combinations thereof, and may have and/or be resident within general purpose computers, special purpose computers, televisions, computer-television combinations, telecommunications systems, networks, mergers of

00000431380

computer and/or television technology and/or telecommunications technology and/or network technology, media, film, entertainment, interactive technologies and/or systems, cybernetics and/or cybernetic systems and/or technology, components, and/or systems, and/or other suitable means, and/or combinations thereof, and may be
5 integrated one with the other and/or with other components and/or systems of one another, and may each be substantially the same and/or different one from the other.

The client-server multitasking system **10** of the present invention, the client-server multitasking process **99**, and the multitasking process **104**, which in itself is a process,
10 the user interfaces $I_1 \dots I_n$ (**14**), and/or the clients $C_1 \dots C_n$ (**16**), and/or the server **PS** (**18**), and/or the servers $S_1 \dots S_z$ (**20**), and/or the optional servers $SO_1 \dots SO_p$ (**22**) may each have the same and/or different hardware, firmware, software, and/or ones of operating systems, and/or other suitable means, and/or combinations thereof. The optional databases **41** and/or **42** may also be hardware, firmware, software, and/or
15 machine based, and/or other suitable means, and/or a combinations thereof, have the same and/or different ones of operating systems and/or combinations thereof, and may have memory components associated therewith.

The client-server multitasking system and process is capable of use on a variety of
20 networks, such as global area networks, and in particular the internet, metropolitan area networks, wide area networks, and local area networks. Such networks may be Earth based, satellite based, and/or space based, and/or other suitable means, and/or combinations thereof.

The scope of the client-server multitasking system **10** of the present invention, the client-server multitasking process **99**, and the multitasking process **104**, however, is not limited to such components, systems, technologies, operating systems and/or
5 networks, as other components, systems, technologies, and/or operating systems exist and/or emerge that may make use of the benefits of the present invention, and are either on the horizon and/or are recognized to be forthcoming.

Determination as to whether the server **PS (18)** performs the multitasking process **104**,
10 and/or whether particular ones of the clients **C₁...C_n (16)** perform the multitasking process **104**, may optionally be made at the particular ones of the clients **C₁...C_n (16)** and/or the server **PS (18)**. Such determination may optionally be made by the users **U₁...U_n (12)**, and/or be based upon processing power, capabilities, and/or configurations of the particular ones of the clients **C₁...C_n (16)**, the server **PS (18)**,
15 and the network **24** considerations (traffic, load, and/or other considerations).

The client-server multitasking search engine and/or database is capable of updating information and/or services stored therein by querying sites, servers, search engines, and/or databases containing information and/or services referenced in client-server
20 multitasking search engine and/or database.

The client-server multitasking system and process is capable of use on a variety of networks, such as global area networks, and in particular the internet, metropolitan area

networks, wide area networks, and local area networks, and is capable of searching search engines and/or other sites substantially simultaneously and on-the-fly.

The client-server multitasking system and process is capable of substantially
5 simultaneous searching of the same and/or different ones of search engines and/or sites on the network substantially on-the-fly, with the same and/or different ones of the queries, and sorting, grouping, and/or organizing responses therefrom substantially on-the-fly.

10 The client-server multitasking system and process is also capable of sorting, grouping, and/or organizing results therefrom the servers, search engines, and/or sites, in accordance with instructions from the requestors, and/or instructions resident within the client-server multitasking system and/or process. The client-server multitasking system and process is also capable drilling down and/or up to different levels within the search
15 engines, sites, and/or servers being queried.

Now again, the typical ones of the service and/or information entry request forms **IE₁...IE_n (38)** at the user interfaces **I₁...I_n (14)** shown in FIGS. 5A, 5B, and 6-10 are typical examples of the service and/or information entry request forms **IE₁...IE_n (38)** at
20 the user interfaces **I₁...I_n (14)**, a much larger variety of which is possible. Names and/or links and/or other information are incorporated therein the typical ones of the service and/or information entry request forms **IE₁...IE_n (38)** shown in FIGS. 5A, 5B, and 6-10 for illustrative purposes, and are not intended to limit the large variety of the

00000 01601560

service and/or information entry request forms **IE₁...IE_n (38)** and the names and/or links and/or information that are possible, and that may be incorporated therein the service and/or information entry request forms **IE₁...IE_n (38)** at the user interfaces **I₁...I_n (14)**.

5

Now again, The typical ones of the completed service and/or information entry request forms **IF₁...IF_n (230)** at the user interfaces **I₁...I_n (14)** shown in FIG. 11-26 are typical examples of the completed service and/or information entry request forms **IF₁...IF_n (230)** at the user interfaces **I₁...I_n (14)**, a much larger variety of which is possible.

10 Typical queries **QQ_{n1}...QQ_{nm} (53)**, typical server addresses **AQ_{n1}...AQ_{nm} (54)**, and typical optional instructions **VJ_{n1}...VJ_{nk} (52)** therein the typical ones of the completed service and/or information entry request forms **IF₁...IF_n (230)** at the user interfaces **I₁...I_n (14)** shown in FIG. 11-26 are typical examples for illustrative purposes, and are not intended to limit the substantially infinite variety of the queries **QQ_{n1}...QQ_{nm} (53)**,
15 the server addresses **AQ_{n1}...AQ_{nm} (54)**, and the optional instructions **VJ_{n1}...VJ_{nk} (52)** that may be entered therein the service and/or information entry request forms **IE₁...IE_n (38)**, to derive the completed service and/or information entry request forms **IF₁...IF_n (230)** at the user interfaces **I₁...I_n (14)**. Likewise, names and/or links and/or other information are incorporated therein the typical ones of the completed service
20 and/or information entry request forms **IF₁...IF_n (230)** shown in FIGS. 11-26 for illustrative purposes, and are not intended to limit the large variety of the completed service and/or information entry request forms **IF₁...IF_n (230)** and the names and/or links and/or information that are possible, and that may be incorporated therein the

2025 RELEASE UNDER E.O. 14176

completed service and/or information entry request forms **IF₁...IF_n (230)** at the user interfaces **I₁...I_n (14)**.

Now again, the typical ones of the user responses **UR₁...UR_n (37)**, as typical service and/or information response forms **IS₁...IS_n (39)** at the user interfaces **I₁...I_n (14)** shown in FIG. 27-52 are typical examples of the user responses **UR₁...UR_n (37)**, as typical service and/or information response forms **IS₁...IS_n (39)** at the user interfaces **I₁...I_n (14)**, a much larger variety of which is possible. FIGS. 27-52 illustrate typical examples of typical ones of the user responses **UR₁...UR_n (37)**, as typical service and/or information response forms **IS₁...IS_n (39)** at the user interfaces **I₁...I_n (14)** to the typical queries typical queries **QQ_{n1}...QQ_{nm} (53)**, the typical ones of the server addresses **AQ_{n1}...AQ_{nm} (54)**, and the typical optional instructions **VJ_{n1}...VJ_{nk} (52)** having been entered therein the typical ones of the completed service and/or information entry request forms **IF₁...IF_n (230)** at the user interfaces **I₁...I_n (14)** shown in FIG. 11-26.

The typical examples of the typical ones of the user responses **UR₁...UR_n (37)**, as typical service and/or information response forms **IS₁...IS_n (39)** at the user interfaces **I₁...I_n (14)** are for illustrative purposes, and are not intended to limit the substantially infinite variety of the user responses **UR₁...UR_n (37)**, as the service and/or information response forms **IS₁...IS_n (39)** at the user interfaces **I₁...I_n (14)**, the queries **QQ_{n1}...QQ_{nm} (53)**, the server addresses **AQ_{n1}...AQ_{nm} (54)**, and the optional instructions **VJ_{n1}...VJ_{nk} (52)** that may be entered thereinto the service and/or
