

Art Unit: 3694

20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)

Regarding claim 33:

Khedkar teaches that the method of claim 30 wherein adjustment of the obtained user input further includes identifying a scoring of the homes sold in the identified sales reflecting the relative level of similarity of the sold homes to the distinguished home, and wherein the constructed new geographically-specific home valuation model emphasizes the significance of the identified sales in a manner consistent with the identified scoring. *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

Regarding claim 34:

Khedkar teaches that the method of claim 30, further comprising:
among the identified recent sales of nearby homes regarded as similar to the distinguished home, determining an average selling price per square foot; *(see at least col. 10 lines 40-50 disclosing square footage)*
multiplying the determined average selling price per square foot by the floor area of the distinguished home to obtain an alternate valuation of the distinguished home; and
before presenting the refined valuation of the distinguished home, blending into the

Art Unit: 3694

refined valuation of the distinguished home the obtained alternate valuation. *(see at least col. 10 lines 40-50 disclosing square footage and col. 13, lines 1-20 disclosing the Fusion system that blends the valuations)*

Regarding claim 35:

Khedkar teaches/suggests that the method of claim 30 wherein the constructed new geographically-specific home valuation model also emphasizes the significance of sales of homes whose locations are determined to be near the location of the distinguished home. *(see fig. 6 disclosing distance from the house and col. 9 lines 30-55 explaining various attributes including distance)*

Regarding claim 36:

Khedkar teaches that the method of claim 35 further comprising determining that the location of a home recently sold is near the location of the distinguished home if it has the same zip code as the distinguished home. *(see fig. 6 disclosing distance from the house and col. 9 lines 30-55 explaining various attributes including distance)*

Regarding claim 37:

Khedkar teaches/suggests that the method of claim 35 further comprising determining that the location of a home recently sold is near the location of the distinguished home if it has the same neighborhood name as the distinguished home. *(see fig. 6 disclosing distance from the house and col. 9 lines 30-55 explaining various attributes including*

Art Unit: 3694

distance)

Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention to use Kim to suggest all the features in the claim.

Regarding claim 38:

Khedkar teaches/suggests that the method of claim 30, further comprising:

accessing a floor area attribute of the distinguished home and the nearby homes whose recent sales were identified, and a selling price for each of the identified sales; *(see at least col. 8 lines 30-55 disclosing other properties)*

determining among the identified sales a selling price per square foot metric;

multiplying the obtained selling price per square foot metric by the floor area of the distinguished home to obtain a product; *(see at least col. 10 lines 40-50 disclosing square footage)*and

combining the product with the result to obtain the determined refined

valuation. *(see at least col. 9, lines 35-45; col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

Regarding claim 39:

Khedkar teaches that the method of claim 35 further comprising determining that the location of a home recently sold is near the distinguished home if the location of the distance between it and the distinguished home is less than a threshold distance. *(see fig. 6 disclosing distance from the house)*

Regarding claim 40:

Khedkar teaches that the method of claim 15 wherein the automatic valuation of the distinguished home involves applying a geographically-specific home valuation model to attributes indicated by an external data source to be possessed by the distinguished home, *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

and wherein the adjustment of the obtained user input includes both (1) altering the home attributes indicated by an external data source to be possessed by the distinguished home and (2) adding a description of an improvement to the distinguished home, *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

the method further comprising detecting that the alteration of home attributes and the improvement description are both directed to adding a new feature to the distinguished home, *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

and wherein, in response to the detecting, the determined refined valuation is based at least in part on applying the geographically-specific home valuation model to the altered

Art Unit: 3694

attributes, and is not based on the improvement description. (*see at least paragraphs 7-9*)

Regarding claim 41:

Khedkar teaches that one or more computer memories collectively containing a home valuation data structure, comprising:

information identifying a home; and

a valuation for the identified home automatically generated based on both

information about the identified home obtained from a public source and information

about the identified home obtained from an owner of the identified home,

such that the contents of the data structure may be used to determine the value of the

identified house. (*see at least col. 10, lines 20-50 disclosing attributes such as the area*

of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the

Fusion system that creates a new evaluation)

Regarding claim 42:

Kim teaches/suggests that the computer memories of claim 41 wherein the data

structure is a display specification capable of causing a computing system to display the

identifying information and the valuation. (*see at least paragraphs Fig. 1, element 106*

and 108)

Art Unit: 3694

Thus, it would have been obvious to try to one of ordinary skill in the art at the time of the invention to use modify Khedkar with Kim so as for the use of a computer to display.

Regarding claim 43:

Kim teaches/suggests that the computer memories of claim 41 wherein the data structure is a web page presenting the identifying information and the valuation. *(see at least paragraphs Fig. 1, element 106 and 108)*

Thus, it would have been obvious to try to one of ordinary skill in the art at the time of the invention to use modify Khedkar with Kim so as for the use of a web page.

3. Claims 11-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Khedkar in view of Kim and in further view of Clemens (US Pat. No. 7,567,262)

Regarding claim 11:

Clemens, not Khedkar teaches/suggests that the computer-readable medium of claim 8, the method further comprising displaying a map showing properties in a geographic region surrounding the distinguished property, and wherein the owner identifies the recent sales of nearby properties regarded by the owner as similar to the distinguished property by selecting them on the displayed map. *(see at least Fig. 1 that discloses a map and pop balloon capability)*

Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify Khedkar with Clemens. Motivation to modify exists because a map is a common method of indicating properties in a geographic region.

Regarding claim 12:

Art Unit: 3694

Kim, not Cheetham, teaches/suggests that the computer-readable medium of claim 8, the method further

comprising displaying a map showing properties in a geographic region surrounding the distinguished property, and wherein the owner identifies each recent sale of a nearby property regarded by the owner as similar to the distinguished property by selecting a control in a popup balloon associated with its location on the displayed map. *(see at least Fig. 1 that discloses a map and pop balloon capability)*

Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify Khedkar with Clemens. Motivation to modify exists because a map is a common method of indicating properties in a geographic region.

4. Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Khedkar in view of Kim and in further view of Ramamoorti (US Pat. Pub. No. 2005/0108084)

Regarding claim 19:

Ramamoorti teaches that the method of claim 18 wherein the geographically-specific home

valuation model is a forest of classification trees each constructed from information about recent sales of homes near the distinguished home. *(see at least paragraphs 18 and 34)*

Thus, it would have been obvious to try to one of ordinary skill in the art at the time of the invention to use valuation model with trees since it is a known method of modeling.

Art Unit: 3694

5. Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Khedkar in view of Kim and in further view of Eder (US pat. Pub. No. 2009/0043637)

Regarding claim 20:

Eder teaches that the method of claim 18 wherein the geographically-specific home valuation model is a linear regression model constructed from information about recent sales of homes near the distinguished home. (*see at least paragraph 158*)

Thus, it would have been obvious to try to one of ordinary skill in the art at the time of the invention to use valuation model with trees since it is a known method of modeling.

6. Claim 21-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Khedkar in view of Kim and in further view of Vladimir Svetnik article "Random Forest: A Classification and Regression Tool for Compound Classification and QSAR Modeling)

Regarding claim 21:

Svetnik teaches that the method of claim 18 wherein the geographically-specific home valuation model is a hybrid model, utilizing both a forest of classification trees and a linear regression-derived function, both constructed from information about recent sales of home near the distinguished home. (*see at least abstract, page 1947 – Introduction*)

Thus, it would have been obvious to try to one of ordinary skill in the art at the time of the invention to use Svetnik, since Svetnik teaches evaluating values for predictive modeling.

Regarding claim 22:

Art Unit: 3694

Khedkar teaches the value of recent homes sales. (*see at least col. 4 lines 1-25 disclosing weighting and col. 10, lines 20-55 disclosing homes with different evaluations*)

Svetnik, not Khedkar, teaches forest classification and linear regression. (*see at least abstract, page 1947 – Introduction*)

Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention to use Kim to suggest all the features in the claim.

Conclusion

2. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. This includes Kim (US Pat. Pub. No. 2005/0154656).

Art Unit: 3694

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ABDUL BASIT whose telephone number is 571-272-5506. The examiner can normally be reached on Flex.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Trammell can be reached on 571-272-6712. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

SIXTH SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT (IDS)

MS Amendment
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

Pursuant to 37 CFR 1.56, 1.97 and 1.98, the attention of the Patent and Trademark Office is hereby directed to the references listed on the attached PTO/SB/08. It is respectfully requested that the information be expressly considered during the prosecution of this application, and that the references be made of record therein and appear among the "References Cited" on any patent to issue therefrom.

This Information Disclosure Statement is filed more than three months after the U.S. filing date, OR more than three months after the date of entry of the national stage of a PCT application, AND after the mailing date of the first Office Action on the merits, whichever occurs first, but before the mailing date of any of a Final Office Action, a Notice of Allowance (37 CFR 1.97(c)) or an action that otherwise closes prosecution in the application.

In accordance with 37 CFR 1.98(a)(2)(ii), Applicant has not submitted copies of U.S. patents and U.S. patent applications. Applicant submits herewith copies of non-patent literature in accordance with 37 CFR 1.98(a)(2).

This Information Disclosure Statement is not to be construed as a representation that: (i) a search has been made; (ii) additional information that may be material to the examination of this application does not exist; (iii) the information, protocols, results and the like reported by third parties are accurate or enabling; or (iv) the cited information is, or is considered to be, material to patentability. In addition, applicant does not admit that any enclosed item of information constitutes prior art to the subject invention and specifically reserves the right to demonstrate that any such reference is not prior art.

It is submitted that the Information Disclosure Statement is in compliance with 37 CFR 1.98 and the Examiner is respectfully requested to consider the listed references.

Please charge the amount of \$180.00 to EFT Account SEA1PIRM covering the fee set forth in 37 CFR 1.17(p). The Director is hereby authorized to charge any deficiency in the fees filed, asserted to be filed or which should have been filed herewith (or with any paper hereafter filed in this application by this firm) to our Deposit Account No. 50-0665, under Order No. 569208005US.

Dated: January 13, 2011

Respectfully submitted,

By _____

FIFTH SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT (IDS)

MS Amendment
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

Pursuant to 37 CFR 1.56, 1.97 and 1.98, the attention of the Patent and Trademark Office is hereby directed to the references listed on the attached PTO/SB/08. It is respectfully requested that the information be expressly considered during the prosecution of this application, and that the references be made of record therein and appear among the "References Cited" on any patent to issue therefrom.

This Information Disclosure Statement is filed more than three months after the U.S. filing date, OR more than three months after the date of entry of the national stage of a PCT application, AND after the mailing date of the first Office Action on the merits, whichever occurs first, but before the mailing date of any of a Final Office Action, a Notice of Allowance (37 CFR 1.97(c)) or an action that otherwise closes prosecution in the application.

In accordance with 37 CFR 1.98(a)(2)(ii), Applicant has not submitted copies of U.S. patents and U.S. patent applications. Applicant submits herewith copies of non-patent literature in accordance with 37 CFR 1.98(a)(2).

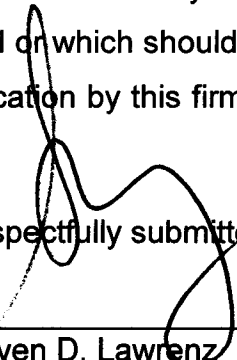

This Information Disclosure Statement is not to be construed as a representation that: (i) a search has been made; (ii) additional information that may be material to the examination of this application does not exist; (iii) the information, protocols, results and the like reported by third parties are accurate or enabling; or (iv) the cited information is, or is considered to be, material to patentability. In addition, applicant does not admit that any enclosed item of information constitutes prior art to the subject invention and specifically reserves the right to demonstrate that any such reference is not prior art.

It is submitted that the Information Disclosure Statement is in compliance with 37 CFR 1.98 and the Examiner is respectfully requested to consider the listed references.

Please charge the amount of \$180.00 to EFT Account SEA1PIRM covering the fee set forth in 37 CFR 1.17(p). The Director is hereby authorized to charge any deficiency in the fees filed, asserted to be filed or which should have been filed herewith (or with any paper hereafter filed in this application by this firm) to our Deposit Account No. 50-0665, under Order No. 569208005US.

Dated: 11/24/2010

Respectfully submitted,

RESPONSE TO NON-FINAL OFFICE ACTION UNDER 37 C.F.R. 1.111

MS Amendment
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

INTRODUCTORY COMMENTS

In response to the Office Action dated May 13, 2010, please amend the above-identified U.S. patent application as follows:

Amendments to the Claims are reflected in the listing of claims which begins on page 2 of this paper.

Remarks/Arguments begin on page 15 of this paper.

AMENDMENTS TO THE CLAIMS

1. (Original) A method in a computing system for automatically determining a valuation for a subject home in response to input from an owner of the home, comprising:

presenting a display that includes an indication of a first valuation determined for the subject home and indications of attributes of the subject home used in the determination, the indicated valuation being determined by applying to the indicated attributes a geographically-specific home valuation model is based upon a plurality of homes near the subject home recently sold;

presenting a display that solicits input from the owner that updates one or more of the indicated attributes;

receiving first input from the owner that updates one or more of the indicated attributes;

applying the geographically-specific home valuation model to attributes of the subject home as updated by the first input to determine and display a second valuation for the subject home;

presenting a display that solicits input from the owner that identifies the type, cost, and timing of one or more home improvements performed on the subject home;

receiving second input from the owner that identifies the type, cost, and timing of one or more home improvements performed on the subject home;

using the second input to determine and display (a) a present value of the identified home improvements and (b) a third valuation that takes into account the present value of the identified home improvements;

presenting a display that solicits input from the owner that identifies other assets or liabilities of the subject home and the value attributed to them by the owner;

receiving third input from the owner that identifies other aspects of the subject home affecting its value and the value attributed to them by the owner;

determining a valuation adjustment corresponding to the identified aspects;

displaying a fourth valuation that takes into account the determined valuation adjustment corresponding to the identified aspects;

presenting a display that solicits input from the owner that identifies homes near the subject home that the owner regards as similar to the subject home;

receiving fourth input from the owner that identifies homes near the subject home recently sold that the owner regards as similar to the subject home;

using the fourth input to generate a tailored geographically-specific home valuation model that (1) is based upon a plurality of homes near the subject home recently sold that is a superset of the homes identified by the fourth input, but (2) places special emphasis on the homes identified by the fourth input;

applying the tailored valuation model to the updated attributes of the subject home to obtain a fifth valuation of the subject home; and

displaying the fifth valuation based on the application of the tailored valuation model.

2. (Original) A computer-readable medium whose contents cause a computing system to perform a method for procuring information about a distinguished property from its owner that is usable to refine an automatic valuation of the distinguished property, the method comprising:

displaying at least a portion of information about the distinguished property used in the automatic valuation of the distinguished property;

obtaining user input from the owner adjusting at least one aspect of information about the distinguished property used in the automatic valuation of the distinguished property; and

displaying to the owner a refined valuation of the distinguished property that is based on the adjustment of the obtained user input.

3. (Original) The computer-readable medium of claim 2, further comprising:

determining whether any of the altered home attributes is an attribute not present among home sales used to construct the geographically-specific home valuation model; and

if so, displaying a warning.

4. (Original) The computer-readable medium of claim 2, further comprising:

determining whether the refined valuation diverges from the automatic valuation by more than a threshold percentage; and

if so, displaying a warning.

5. (Original) The computer-readable medium of claim 2 wherein the adjustment of the obtained user input includes altering property attributes used in the automatic valuation of the distinguished property, and wherein the displayed refined valuation is based at least in part on the altered property attributes.

6. (Original) The computer-readable medium of claim 2 wherein the adjustment of the obtained user input includes adding a description of an improvement to the distinguished property, and wherein the displayed refined valuation is based at least in part on a valuation of the described improvement.

7. (Original) The computer-readable medium of claim 2 wherein the adjustment of the obtained user input includes adding a description of an aspect of the distinguished property not considered by the automatic valuation of the distinguished property and an estimate by the owner of its value, and wherein the displayed refined valuation is based at least in part on the estimate of the value of the described aspect.

8. (Original) The computer-readable medium of claim 2 wherein the adjustment of the obtained user input includes identifying recent sales of nearby properties regarded by the owner as similar to the distinguished property, and wherein the displayed refined valuation is based at least in part on a repetition of the automatic valuation of the distinguished property in which the influence of the identified sales is magnified.

9. (Original) The computer-readable medium of claim 8 wherein the adjustment of the obtained user input further includes identifying a scoring of the properties sold in the identified sales reflecting the relative level of similarity of the sold properties to the distinguished property, and wherein the displayed refined valuation is based at least in part on a repetition of the automatic valuation of the distinguished property in which the influence of the identified sales is magnified in a manner consistent with the identified scores.

10. (Original) The computer-readable medium of claim 9 wherein the user input identifies a scoring of the properties sold in the identified sales reflecting the relative level of similarity of the sold properties to the distinguished property by specifying a ranked order for the identified sales.

11. (Original) The computer-readable medium of claim 8, the method further comprising displaying a map showing properties in a geographic region surrounding the distinguished property,
and wherein the owner identifies the recent sales of nearby properties regarded by the owner as similar to the distinguished property by selecting them on the displayed map.

12. (Original) The computer-readable medium of claim 8, the method further comprising displaying a map showing properties in a geographic region surrounding the distinguished property,
and wherein the owner identifies each recent sale of a nearby property regarded by the owner as similar to the distinguished property by selecting a control in a popup balloon associated with its location on the displayed map.

13. (Original) The computer-readable medium of claim 8, the method further comprising displaying a table comprising rows each containing textual information about a different one of a plurality of recent sales of nearby properties,
and wherein the owner identifies each recent sale of a nearby property regarded by the owner as similar to the distinguished property by interaction with the row containing information about the sale.

14. (Original) The computer-readable medium of claim 2 wherein the adjustment of the obtained user input includes identifying nearby properties regarded by the owner as similar to the distinguished property, and wherein the displayed refined valuation is based at least in part on a repetition of the automatic valuation of the distinguished property in which the influence of values for the identified sales properties is magnified.

15. (Original) A method in a computing system for refining an automatic valuation of a distinguished home based upon input from a user knowledgeable about the distinguished home, comprising:

obtaining user input adjusting at least one aspect of information about the distinguished home used in the automatic valuation of the distinguished home;

automatically determining a refined valuation of the distinguished home that is based on the adjustment of the obtained user input; and

presenting the refined valuation of the distinguished home.

16. (Original) The method of claim 15 wherein the presenting involves displaying the refined valuation of the distinguished home to a user providing the user input.

17. (Original) The method of claim 15 wherein the presenting involves displaying the refined valuation of the distinguished home to a user other than the user providing the user input.

18. (Original) The method of claim 15 wherein the automatic valuation of the distinguished home involves applying a geographically-specific home valuation model to attributes indicated by an external data source to be possessed by the distinguished home,
and wherein the adjustment of the obtained user input includes altering the home attributes indicated by an external data source to be possessed by the distinguished home, and wherein the determined refined valuation is based at least in part on applying the geographically-specific home valuation model to the altered attributes.

19. (Original) The method of claim 18 wherein the geographically-specific home valuation model is a forest of classification trees each constructed from information about recent sales of homes near the distinguished home.

20. (Original) The method of claim 18 wherein the geographically-specific home valuation model is a linear regression model constructed from information about recent sales of homes near the distinguished home.

21. (Original) The method of claim 18 wherein the geographically-specific home valuation model is a hybrid model, utilizing both a forest of classification trees and a linear regression-derived function, both constructed from information about recent sales of home near the distinguished home.

22. (Original) The method of claim 21 wherein the refined valuation is determined by dividing by a first valuation of the distinguished home generated by the linear regression-derived function from the attributes indicated by the external data source to be possessed by the distinguished home a second valuation generated by the linear regression-derived function based upon the altered attributes to obtain a ratio, and wherein the ratio is multiplied by a valuation generated by the forest of classification trees based upon the home attributes indicated by the external data source to be possessed by the distinguished home.

23. (Original) The method of claim 21, further comprising weighting in the construction of the linear regression-derived function information about recent sales of individual homes near the distinguished home based upon the extents to which the sold home and the distinguished home are similar to high-value homes near the distinguished home.

24. (Original) The method of claim 21, further comprising weighting in the construction of the linear regression-derived function information about recent sales of individual homes near the distinguished home based upon the degree of nearness of each of the sold homes to the distinguished home.

25. (Original) The method of claim 18 wherein the geographically-specific home valuation model is constrained to consider only home attributes available for alteration by the user.

26. (Original) The method of claim 15 wherein the adjustment of the obtained user input includes adding a description of an improvement to the distinguished home, and wherein the determined refined valuation is based at least in part on a valuation of the described improvement.

27. (Original) The method of claim 26 wherein the added improvement description identifies an improvement type and a cost for the described improvement, further comprising determining the valuation of the described improvement by applying a localized improvement cost recovery rate for the identified improvement type to the identified cost.

28. (Original) The method of claim 26 wherein the added improvement description identifies an age of the described improvement and a cost for the described improvement,

further comprising determining the valuation of the described improvement by applying a depreciation schedule to the identified age and cost.

29. (Original) The method of claim 15 wherein the adjustment of the obtained user input includes adding a description of an aspect of the distinguished home not considered by the automatic valuation of the distinguished home and an estimate by a user providing the user input of its value, and wherein the determined refined valuation is based at least in part on the estimate of the value of the described aspect.

30. (Original) The method of claim 15 wherein the automatic valuation of the distinguished home involves applying a geographically-specific home valuation model to attributes indicated by an external data source to be possessed by the distinguished home,
and wherein the adjustment of the obtained user input includes identifying recent sales of nearby homes regarded as similar to the distinguished home,
the method further comprising:

constructing a new geographically-specific home valuation model that emphasizes the significance of the identified sales; and

applying the constructed new geographically-specific home valuation model to attributes of the distinguished home to obtain a result,
and wherein the determined refined valuation is based at least in part on the obtained result.

31. (Original) The method of claim 30 wherein the constructed new geographically-specific home valuation model is applied to attributes indicated by the external data source to be possessed by the distinguished home.

32. (Original) The method of claim 30 wherein the adjustment of the obtained user input further includes altering the home attributes indicated by the

external data source to be possessed by the distinguished home, and wherein the constructed new geographically-specific home valuation model is applied to altered attributes.

33. (Original) The method of claim 30 wherein adjustment of the obtained user input further includes identifying a scoring of the homes sold in the identified sales reflecting the relative level of similarity of the sold homes to the distinguished home, and wherein the constructed new geographically-specific home valuation model emphasizes the significance of the identified sales in a manner consistent with the identified scoring.

34. (Original) The method of claim 30, further comprising:
among the identified recent sales of nearby homes regarded as similar to the distinguished home, determining an average selling price per square foot;
multiplying the determined average selling price per square foot by the floor area of the distinguished home to obtain an alternate valuation of the distinguished home; and
before presenting the refined valuation of the distinguished home, blending into the refined valuation of the distinguished home the obtained alternate valuation.

35. (Original) The method of claim 30 wherein the constructed new geographically-specific home valuation model also emphasizes the significance of sales of homes whose locations are determined to be near the location of the distinguished home.

36. (Original) The method of claim 35 further comprising determining that the location of a home recently sold is near the location of the distinguished home if it has the same zip code as the distinguished home.

37. (Original) The method of claim 35 further comprising determining that the location of a home recently sold is near the location of the distinguished home if it has the same neighborhood name as the distinguished home.

38. (Original) The method of claim 30, further comprising:
accessing a floor area attribute of the distinguished home and the nearby homes whose recent sales were identified, and a selling price for each of the identified sales;
determining among the identified sales a selling price per square foot metric;
multiplying the obtained selling price per square foot metric by the floor area of the distinguished home to obtain a product; and
combining the product with the result to obtain the determined refined valuation.

39. (Original) The method of claim 35 further comprising determining that the location of a home recently sold is near the distinguished home if the location of the distance between it and the distinguished home is less than a threshold distance.

40. (Original) The method of claim 15 wherein the automatic valuation of the distinguished home involves applying a geographically-specific home valuation model to attributes indicated by an external data source to be possessed by the distinguished home,
and wherein the adjustment of the obtained user input includes both (1) altering the home attributes indicated by an external data source to be possessed by the distinguished home and (2) adding a description of an improvement to the distinguished home,
the method further comprising detecting that the alteration of home attributes and the improvement description are both directed to adding a new feature to the distinguished home,
and wherein, in response to the detecting, the determined refined valuation is based at least in part on applying the geographically-specific home valuation model to the altered attributes, and is not based on the improvement description.

41. (Original) One or more computer memories collectively containing a home valuation data structure, comprising:
information identifying a home; and
a valuation for the identified home automatically generated based on both information about the identified home obtained from a public source and information about the identified home obtained from an owner of the identified home,
such that the contents of the data structure may be used to determine the value of the identified house.

42. (Original) The computer memories of claim 41 wherein the data structure is a display specification capable of causing a computing system to display the identifying information and the valuation.

43. (Original) The computer memories of claim 41 wherein the data structure is a web page presenting the identifying information and the valuation.

REMARKS

In the non-final Office Action mailed on May 13, 2010, the Examiner rejected claims 1-2 and 5-14 under 35 U.S.C. § 102(b) over U.S. Patent No. 6,178,406 to Cheetham et al. ("Cheetham"); rejected claims 1-10, 13-19, and 23-43 under 35 U.S.C. § 103(a) over U.S. Patent No. 6,609,118 to Khedkar et al. ("Khedkar") and U.S. Patent Application Publication No. 2005/0154657 to Kim et al. ("Kim '657"); rejected claims 11-12 under 35 U.S.C. § 103(a) over Khedkar, Kim '657, and U.S. Patent No. 7,567,262 to Clemens et al. ("Clemens"); rejected claim 19 under 35 U.S.C. § 103(a) over Khedkar, Kim '657, and U.S. Patent Application Publication No. 2005/0108084 to Ramamoorti et al. ("Ramamoorti"); rejected claim 20 under 35 U.S.C. § 103(a) as being unpatentable over Khedkar, Kim '657, and U.S. Patent Application Publication No. 2009/0043637 to Eder ("Eder"); and rejected claims 21-22 under 35 U.S.C. § 103(a) as being unpatentable over Khedkar, Kim '657 and Vladimir Svetnik et al. article, "Random Forest: A Classification and Regression Tool for Compound Classification and QSAR Modeling" ("Svetnik"). Claims 1-43 remain pending. For the reasons set forth in detail below, applicants submit that all of the claims are allowable.

The Examiner rejected claims 1-2 and 5-14 under 35 U.S.C. § 102(b) over Cheetham. Applicants respectfully traverse this rejection.

Independent claim 1 recites, in part:

presenting a display that solicits input from the owner that updates one or more of the indicated attributes;
receiving first input from the owner that updates one or more of the indicated attributes;

The Examiner indicated that these recited features are disclosed by Cheetham's discussion at 2:50-65 of property attributes such as property location and garage type. Neither this passage of Cheetham, nor any other portion that applicants can identify,

discloses that attribute values for the subject property are received from the property's owner as recited.

Claim 1 further recites:

applying the geographically-specific home valuation model to attributes of the subject home as updated by the first input to determine and display a second valuation for the subject home;

The Examiner indicated that this recited feature is disclosed by Cheetham at 3:50-63, said by the Examiner to disclose evaluating a property a second time. Applicants submit that the processing described in this section is simply a part of Cheetham's single valuation process shown in Figure 1, and does not produce a second valuation as asserted by the Examiner. Further, neither this passage nor the balance of Cheetham discloses displaying a second valuation for the subject property.

Claim 1 further recites:

presenting a display that solicits input from the owner that identifies the type, cost, and timing of one or more home improvements performed on the subject home;

receiving second input from the owner that identifies the type, cost, and timing of one or more home improvements performed on the subject home;

The Examiner indicated that this feature is disclosed by Cheetham in Figures 1 and 2 and at 2:1-4. However, the word "improvement" does not appear in any of these portions of Cheetham. Additionally, nothing in these portions of Cheetham discloses receiving any information from the owner of the subject property as recited.

Claim 1 further recites:

using the second input to determine and display (a) a present value of the identified home improvements and (b) a third valuation that takes into account the present value of the identified home improvements;

The Examiner indicated that this recited feature is disclosed by Cheetham at 2:50-65. However, this passage neither describes determining a valuation based in any part information about improvements received from the subject property's owner, nor displaying any third valuation of the subject property.

Claim 1 further recites:

displaying a fourth valuation that takes into account the determined valuation adjustment corresponding to the identified aspects;

The Examiner indicated that this recited feature is disclosed by Cheetham at 4:30-65. However, this passage merely describes weighting comparable homes based on the level of similarity of their attribute values to those of the subject home, and does not disclose displaying an additional valuation of the subject property.

Claim 1 further recites:

presenting a display that solicits input from the owner that identifies homes near the subject home that the owner regards as similar to the subject home;

receiving fourth input from the owner that identifies homes near the subject home recently sold that the owner regards as similar to the subject home;

The Examiner indicated that these recited features are disclosed by Cheetham in Figures 1-3 and at 2:1-45. However, none of these portions of Cheetham disclose that any comparable or similar homes are identified by the owner of the subject home.

Claim 1 further recites:

using the fourth input to generate a tailored geographically-specific home valuation model that (1) is based upon a plurality of homes near the subject home recently sold that is a superset of the homes identified by the fourth input, but (2) places special emphasis on the homes identified by the fourth input;

The Examiner indicated that this recited feature is disclosed by Cheetham at 2:30-45 and 4:1-10. However, neither of these portions of Cheetham describes determining a valuation based on any part on homes identified by the owner of the subject home, or generated and displaying any additional valuation of the subject. For these reasons, claim 1 is patentable over Cheetham.

Independent claim 2 recites:

displaying at least a portion of information about the distinguished property used in the automatic valuation of the distinguished property;

obtaining user input from the owner adjusting at least one aspect of information about the distinguished property used in the automatic valuation of the distinguished property; and

displaying to the owner a refined valuation of the distinguished property that is based on the adjustment of the obtained user input.

The Examiner indicated that all of the recited features are disclosed by Cheetham at 4:29-65. With respect to the recited displaying, this passage of Cheetham fails to

disclose the display of any information, or even any sort of outputting of any information, let alone the recited displaying of information about the distinguished property used in its automatic valuation. With respect to the recited obtaining, the cited passage of Cheetham makes no mention of receiving any user input from the owner of the distinguished property, let alone receiving user input from the owner that adjusts at least one aspect of information about the distinguished property used in its automatic valuation. With respect to the recited displaying, as noted above, the cited passage fails to disclose the display of any information, let alone a refined valuation based on the adjustment of the obtained user input. Based upon the failure of Cheetham to disclose any of the features of claim 2 identified above, claim 2 is patentable over Cheetham, as are its dependent claims 3-14. Further, while applicants do not believe that claim 2 is obvious over Cheetham, the Examiner's statement that "it would have been obvious to one of ordinary skill in the art at the time of the invention to use Cheetham to suggest all of the features in the claim" fails to support the rejection of this claim under 35 U.S.C. § 102(b). For the foregoing reasons, applicants respectfully request that the Examiner reconsider and withdraw the rejection under 35 U.S.C. § 102(b).

The Examiner rejected claims 1-43 under 35 U.S.C. § 103(a) over Khedkar and Kim '657, either alone or further combined with Clemens, Ramamoorti, Eder, or Svetnik. Applicants respectfully traverse this rejection.

Independent claim 1 recites, in part:

presenting a display that includes an indication of a first valuation determined for the subject home and indications of attributes of the subject home used in the determination, the indicated valuation being determined by applying to the indicated attributes a geographically-specific home valuation model is based upon a plurality of homes near the subject home recently sold;

The Examiner indicated that this feature is disclosed by Khedkar at 8:30-35 and 2:64-65. However, these passages of Khedkar fail to disclose displaying a first valuation determined for a subject home together with indications of attributes of the subject home used in the determination.

Claim 1 further recites:

presenting a display that solicits input from the owner that updates one or more of the indicated attributes;

receiving first input from the owner that updates one or more of the indicated attributes;

The Examiner indicated that these features are disclosed by Khedkar at 5:63-6:25. However, this passage fails to disclose obtaining updates to one or more attributes from the owner of the property.

Claim 1 further recites:

applying the geographically-specific home valuation model to attributes of the subject home as updated by the first input to determine and display a second valuation for the subject home;

The Examiner indicated that this feature is disclosed by Khedkar at 8:45-65. However, this passage of Khedkar fails to disclose that a valuation for the subject property is determined based upon attributes of the subject property as updated by input from its owner.

Claim 1 further recites:

presenting a display that solicits input from the owner that identifies the type, cost, and timing of one or more home improvements performed on the subject home;

receiving second input from the owner that identifies the type, cost, and timing of one or more home improvements performed on the subject home;

The Examiner indicated that these features are disclosed by Kim '657 in paragraphs 36-37. However, these portions of Kim discussed input received from an appraiser, not the owner of the home as recited.

Claim 1 further recites:

using the second input to determine and display (a) a present value of the identified home improvements and (b) a third valuation that takes into account the present value of the identified home improvements;

The Examiner indicated that this feature is disclosed by Khedkar at 12:62-13:20, asserting that this passage discloses creating a new valuation. As a first matter, as discussed above in connection with the rejection of claim 1 over Cheetham, this passage does not disclose generating an additional valuation, but rather performing a constituent step in generating a single valuation. Second, this passage does not disclose a display of any valuation, nor a present value for any identified home improvements.

Claim 1 further recites:

presenting a display that solicits input from the owner that identifies other assets or liabilities of the subject home and the value attributed to them by the owner;

receiving third input from the owner that identifies other aspects of the subject home affecting its value and the value attributed to them by the owner;

The Examiner indicated that these features are disclosed by Khedkar at 12:62-13:20. However, this passage does not disclose obtaining any input from the property's owner.

Claim 1 further recites:

presenting a display that solicits input from the owner that identifies homes near the subject home that the owner regards as similar to the subject home;

receiving fourth input from the owner that identifies homes near the subject home recently sold that the owner regards as similar to the subject home;

The Examiner indicated that these features are disclosed by Khedkar at 12:62-13:20. However, this portion of Khedkar fails to disclose obtaining any information from the owner of the property. Based upon the failure of both Khedkar and Kim '657 to disclose the recited features identified above, claim 1 is patentable over Khedkar and Kim '657.

Independent claim 2 recites, in part:

displaying at least a portion of information about the distinguished property used in the automatic valuation of the distinguished property;

The Examiner indicated that this feature is disclosed by Khedkar at 12:62-13:20. However, this passage of Khedkar fails to disclose the display of any information, let alone displaying at least a portion of information about the distinguished property used in the automatic valuation of the distinguished property as recited.

Claim 2 further recites:

obtaining user input from the owner adjusting at least one aspect of information about the distinguished property used in the automatic valuation of the distinguished property; and

The Examiner indicated that this feature is disclosed by Khedkar at 12:62-13:20. However, this portion of Khedkar completely fails to disclose obtaining any kind of user input, let alone user input from the owner adjusting at least one aspect of information about the distinguished property used in the automatic valuation of the distinguished property as recited.

Claim 2 further recites:

displaying to the owner a refined valuation of the distinguished property that is based on the adjustment of the obtained user input.

The Examiner indicated that this feature is disclosed by Khedkar at 10:20-50 and 12:62-20. Neither of these portions of Khedkar disclose displaying anything to any person, let alone displaying to the owner a refined valuation of the distinguished property that is based on the adjustment of the obtained user input as recited.

Based upon the failure of Khedkar and Kim '657 to disclose any of the features recited by claim 2, it is patentable over Khedkar and Kim '657, as are its dependent claims 3-14.

Independent claim 15 recites:

obtaining user input adjusting at least one aspect of information about the distinguished home used in the automatic valuation of the distinguished home;

automatically determining a refined valuation of the distinguished home that is based on the adjustment of the obtained user input; and
presenting the refined valuation of the distinguished home.

The Examiner indicated that the recited obtaining and automatically determining features are disclosed by Kim '657 at 10:20-50 "disclosing attributes such as the area of a bathroom or bedroom" and 12:62-13:20 "that disclose the Fusion system that creates a new evaluation." As a first matter, while the rejection identifies Kim '657 as the cited reference, applicants believe that the Examiner intended to cite the Khedkar reference. Kim '657, as a published application, does not have individually-identified columns, and would typically be cited by paragraph number. Further, the portions of Kim '657 at the positions cited by the Examiner do not discuss the subjects described by the Examiner, while the corresponding portions of Khedkar do discuss these subjects. Accordingly, applicants assume that the rejection was intended by the Examiner to identify Khedkar.

Regarding the recited "obtaining" feature, the cited passages of Khedkar do not disclose any such obtaining. While the first cited portion of Khedkar does refer to "adjustments," these are adjustments that are made automatically – not based upon user input – to adjust the price per square foot of comparable homes based upon differences between attribute values of those comparable homes and the corresponding attribute values of the subject home. Accordingly, these adjustments described by Khedkar do not amount to user input adjusting at least one aspect of information about the distinguished home used in automatically evaluating it, as recited. Regarding the recited automatically determining feature, neither of the cited portions of Khedkar discloses any automatic determination of a valuation of a distinguished home that is

based on the adjustment of obtained user input as recited. Finally, the Examiner has failed to identify any portion of Khedkar or Kim that discloses the presenting feature recited in claim 15. For these reasons, claim 15 is patentable over Khedkar and Kim, as are its dependent claims 16-40.

Independent claim 41 recites:

information identifying a home; and
a valuation for the identified home automatically generated based on both information about the identified home obtained from a public source and information about the identified home obtained from an owner of the identified home,
such that the contents of the data structure may be used to determine the value of the identified house.

The Examiner indicated that all the recited features of this claim are disclosed by Khedkar at 10:20-50 and 12:62-13:20. Neither of these passages of Khedkar discloses a valuation for a home that is automatically generated based on both information about the identified obtained from a public source and information about the identified home obtained from an owner of the identified home as recited. In fact, neither of these passages does anything to identify the source of attribute values for the subject property used as the basis for property valuation by Khedkar, let alone disclosing that both information obtained from a public source and information obtained from the identified home's owner is used in a valuation as recited. Accordingly, claim 41 is patentable over Khedkar and Kim '657, as are its dependent claims 42 and 43.

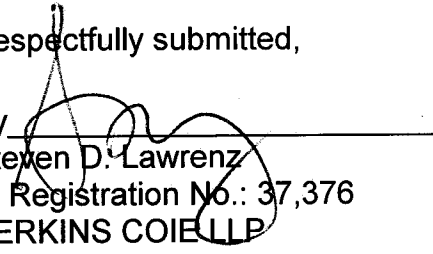

For the reasons set forth above, applicants respectfully request that the Examiner reconsider and withdraw all of the pending rejections under 35 U.S.C. § 103(a).

Based on the foregoing, applicants submit that the application is in condition for allowance. Accordingly, applicants earnestly solicit a prompt Notice of Allowance. If the Examiner identifies any other issues that would prevent him from immediately allowing the application, he is invited to contact the undersigned to pursue a speedy resolution.

Please charge any deficiency in fees or credit any overpayment to our Deposit Account No. 50-0665, under Order No. 569208005US from which the undersigned is authorized to draw.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

FOURTH SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT (IDS)

MS Amendment
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

Pursuant to 37 CFR 1.56, 1.97 and 1.98, the attention of the Patent and Trademark Office is hereby directed to the references listed on the attached PTO/SB/08. It is respectfully requested that the information be expressly considered during the prosecution of this application, and that the references be made of record therein and appear among the "References Cited" on any patent to issue therefrom.

This Information Disclosure Statement is filed more than three months after the U.S. filing date, OR more than three months after the date of entry of the national stage of a PCT application, AND after the mailing date of the first Office Action on the merits, whichever occurs first, but before the mailing date of a Final Office Action or Notice of Allowance (37 CFR 1.97(c)).

In accordance with 37 CFR 1.98(a)(2)(ii), Applicant has not submitted copies of U.S. patents and U.S. patent applications. Applicant submits herewith copies of non-patent literature in accordance with 37 CFR 1.98(a)(2).

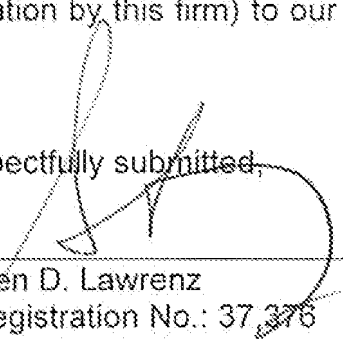

This Information Disclosure Statement is not to be construed as a representation that: (i) a search has been made; (ii) additional information that may be material to the examination of this application does not exist; (iii) the information, protocols, results and the like reported by third parties are accurate or enabling; or (iv) the cited information is, or is considered to be, material to patentability. In addition, applicant does not admit that any enclosed item of information constitutes prior art to the subject invention and specifically reserves the right to demonstrate that any such reference is not prior art.

It is submitted that the Information Disclosure Statement is in compliance with 37 CFR 1.98 and the Examiner is respectfully requested to consider the listed references.

Please charge the amount of \$180.00 to EFT Account SEA1PIRM covering the fee set forth in 37 CFR 1.17(p). The Director is hereby authorized to charge any deficiency in the fees filed, asserted to be filed or which should have been filed herewith (or with any paper hereafter filed in this application by this firm) to our Deposit Account No. 50-0665, under Order No. 569208005US.

Dated: 5-20-2010

Respectfully submitted,

By

Table with 5 columns: APPLICATION NO., FILING DATE, FIRST NAMED INVENTOR, ATTORNEY DOCKET NO., CONFIRMATION NO. Includes details for application 11/347,024 filed 02/03/2006 by David Cheng, attorney Perkins Coie LLP, examiner BASIT, ABDUL, art unit 3694, and notification date 05/13/2010.

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

patentprocurement@perkinscoie.com

Office Action Summary	Application No. 11/347,024	Applicant(s) CHENG ET AL.	
	Examiner ABDUL BASIT	Art Unit 3694	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 03 February 2006.
- 2a) This action is **FINAL**.
- 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-43 is/are pending in the application.
 - 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1-43 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some * c) None of:
 - 1. Certified copies of the priority documents have been received.
 - 2. Certified copies of the priority documents have been received in Application No. _____.
 - 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

The following is a supplemental action being sent out in response to the Applicant's request.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2 and 5-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Cheetham (US Pat. No. 6,178,406)

Regarding claim 1:

Cheetham teaches a method in a computing system for automatically determining a valuation for a subject home in response to input from an owner of the home, comprising:

presenting a display that includes an indication of a first valuation determined for the subject home and indications of attributes of the subject home used in the determination, the indicated valuation being determined by applying to the indicated attributes a geographically-specific home valuation model is based upon a plurality of homes near the subject home recently sold; (*see at least col. 2, lines 30-45 indicating comparison of properties to recently sold property, col. 4, lines 1-10 teaching distance*

Art Unit: 3694

from property (geographic location))

presenting a display that solicits input from the owner that updates one or more of the indicated attributes; *(see at least col. 2 lines 50-65 teach inputs such as location type of garage on property))*

receiving first input from the owner that updates one or more of the indicated attributes; *(see at least col. 2 lines 50-65 teach inputs such as location type of garage on property))*

applying the geographically-specific home valuation model to attributes of the subject home as updated by the first input to determine and display a second valuation for the subject home; *(see at least col. 3 lines 50-64 teaches evaluating the property the second time)*

presenting a display that solicits input from the owner that identifies the type, cost, and timing of one or more home improvements performed on the subject home; *(see at least Figs. 1-2 and col. 2, lines 1-40)*

receiving second input from the owner that identifies the type, cost, and timing of one or more home improvements performed on the subject home; *(see at least col. 2 lines 50-65 teach inputs such as location type of garage on property))*

using the second input to determine and display (a) a present value of the identified home improvements and (b) a third valuation that takes into account the present value of the identified home improvements; *(see at least col. 2 lines 50-65 teach inputs such as location type of garage on property))*

presenting a display that solicits input from the owner that identifies other assets or

Art Unit: 3694

liabilities of the subject home and the value attributed to them by the owner;

receiving third input from the owner that identifies other aspects of the subject home affecting its value and the value attributed to them by the owner; *(see at least col. 3, lines 45-65 that teach different inputs such as style of property or roof type)*

determining a valuation adjustment corresponding to the identified aspects; *(see at least col. 4, lines 30-65 which teach a value associated with a property)*

displaying a fourth valuation that takes into account the determined valuation adjustment corresponding to the identified aspects; *(see at least col. 4, lines 30-65 which teach a value associated with a property)*

presenting a display that solicits input from the owner that identifies homes near the subject home that the owner regards as similar to the subject home; *(see at least Figs. 1-3 and col. 2, lines 1-45)*

receiving fourth input from the owner that identifies homes near the subject home recently sold that the owner regards as similar to the subject home; *(see at least Figs. 1-3 and col. 2, lines 1-45)*

using the fourth input to generate a tailored geographically-specific home valuation model that (1) is based upon a plurality of homes near the subject home recently sold that is a superset of the homes identified by the fourth input, but (2) places special emphasis on the homes identified by the fourth input; *(see at least col. 2, lines 30-45 indicating comparison of properties to recently sold property, col. 4, lines 1-10 teaching distance from property (geographic location))*

applying the tailored valuation model to the updated attributes of the subject home to

Art Unit: 3694

obtain a fifth valuation of the subject home; (*see at least col. 4, lines 29-65*) and displaying the fifth valuation based on the application of the tailored valuation model. (*see at least col. 4, lines 29-65*)

Regarding claim 2:

Cheetham teaches a computer-readable medium whose contents cause a computing system to perform a method for procuring information about a distinguished property from its owner that is usable to refine an automatic valuation of the distinguished property, the method comprising:

displaying at least a portion of information about the distinguished property used in the automatic valuation of the distinguished property; (*see at least col. 4, lines 29-65*)

obtaining user input from the owner adjusting at least one aspect of information about the distinguished property used in the automatic valuation of the distinguished property; (*see at least Col. 4 lines 29-65*) and

displaying to the owner a refined valuation of the distinguished property that is based on the adjustment of the obtained user input. (*see at least Col. 4 lines 29-65*)

Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention to use Cheetham to suggest all the features in the claim.

Regarding claim 5:

Art Unit: 3694

Cheetham teaches that the computer-readable medium of claim 2 wherein the adjustment of the obtained user input includes altering property attributes used in the automatic valuation of the distinguished property, and wherein the displayed refined valuation is based at least in part on the altered property attributes. *(see at least col. 3, lines 29-65)*

Regarding claim 6:

Cheetham teaches that the computer-readable medium of claim 2 wherein the adjustment of the obtained user input includes adding a description of an improvement to the distinguished property, and wherein the displayed refined valuation is based at least in part on a valuation of the described improvement. *(see at least col. 4, lines 29-65)*

Regarding claim 7:

Cheetham teaches that the computer-readable medium of claim 2 wherein the adjustment of the obtained user input includes adding a description of an aspect of the distinguished property not considered by the automatic valuation of the distinguished property and an estimate by the owner of its value, and wherein the displayed refined valuation is based at least in part on the estimate of the value of the described aspect. *(see at least col. 4, lines 29-65 and Fig 3)*

Regarding claim 8:

Art Unit: 3694

Cheetham teaches that the computer-readable medium of claim 2 wherein the adjustment of the obtained user input includes identifying recent sales of nearby properties regarded by the owner as similar to the distinguished property, and wherein the displayed refined valuation is based at least in part on a repetition of the automatic valuation of the distinguished property in which the influence of the identified sales is magnified. *(see at least col. 4, lines 29-65 and Fig 3)*

Regarding claim 9:

Cheetham teaches/suggests that the computer-readable medium of claim 8 wherein the adjustment of the obtained user input further includes identifying a scoring of the properties sold in the identified sales reflecting the relative level of similarity of the sold properties to the distinguished property, and wherein the displayed refined valuation is based at least in part on a repetition of the automatic valuation of the distinguished property in which the influence of the identified sales is magnified in a manner consistent with the identified scores. *(see at least col. 4, lines 29-65 and Fig 3)*

Regarding claim 10:

Cheetham teaches that the computer-readable medium of claim 9 wherein the user input identifies a scoring of the properties sold in the identified sales reflecting the relative level of similarity of the sold properties to the distinguished property by specifying a ranked order for the identified sales. *(see at least col. 4, lines 29-65 and Fig 3)*

Regarding claim 13:

Cheetham teaches that the computer-readable medium of claim 8, the method further comprising displaying a table comprising rows each containing textual information about a different one of a plurality of recent sales of nearby properties, and wherein the owner identifies each recent sale of a nearby property regarded by the owner as similar to the distinguished property by interaction with the row containing information about the sale. *(see at least tables 2 and 3 in Col. 6)*

Regarding claim 14:

Cheetham teaches that the computer-readable medium of claim 2 wherein the adjustment of the obtained user input includes identifying nearby properties regarded by the owner as similar to the distinguished property, and wherein the displayed refined valuation is based at least in part on a repetition of the automatic valuation of the distinguished property in which the influence of values for the identified sales properties is magnified. *(see at least col. 3, lines 30-65 and col. 2 lines 50-60)*

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 3694

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-10, 13-19, and 23-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Khedkar (US Pat. No. 6,609,18) in view of Kim (US Pat. Pub. No. 2005/0154657)

Regarding claim 1:

Khedkar teaches a method in a computing system for automatically determining a valuation for a subject home in response to input from an owner of the home, comprising:

presenting a display that includes an indication of a first valuation determined for the subject home and indications of attributes of the subject home used in the determination, the indicated valuation being determined by applying to the indicated attributes a geographically-specific home valuation model is based upon a plurality of homes near the subject home recently sold; *(see at least col. 8, lines 30-35 and col. 2, lines 64-65 disclosing a valuation based on geographic specific property)*

presenting a display that solicits input from the owner that updates one or more of the indicated attributes; *(see at col. 6, lines 1-25 and col. 5, lines 63-65 disclosing updating inputs)*

receiving first input from the owner that updates one or more of the indicated attributes; *(see at col. 6, lines 1-25 and col. 5, lines 63-65 disclosing updating inputs)*

applying the geographically-specific home valuation model to attributes of the subject

Art Unit: 3694

home as updated by the first input to determine and display a second valuation for the subject home; *(see at col. 8, lines 45-65 disclosing using the values to obtain a second valuation)*

using the second input to determine and display (a) a present value of the identified home improvements and (b) a third valuation that takes into account the present value of the identified home improvements; *(see at least col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

presenting a display that solicits input from the owner that identifies other assets or liabilities of the subject home and the value attributed to them by the owner;

receiving third input from the owner that identifies other aspects of the subject home affecting its value and the value attributed to them by the owner; *(see at least col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

determining a valuation adjustment corresponding to the identified aspects; *(see at least col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

displaying a fourth valuation that takes into account the determined valuation adjustment corresponding to the identified aspects; *(see at least col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

presenting a display that solicits input from the owner that identifies homes near the subject home that the owner regards as similar to the subject home; *(see at least col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a*

Art Unit: 3694

new evaluation)

receiving fourth input from the owner that identifies homes near the subject home recently sold that the owner regards as similar to the subject home; *(see at least col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

using the fourth input to generate a tailored geographically-specific home valuation model that (1) is based upon a plurality of homes near the subject home recently sold that is a superset of the homes identified by the fourth input, but (2) places special emphasis on the homes identified by the fourth input; *(see at least col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

applying the tailored valuation model to the updated attributes of the subject home to obtain a fifth valuation of the subject home; *(see at least col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

NOTE: Applicant is also directed to claim 1-3 of the Khedkar reference which disclose a reiterative process that discloses the reiterative process occurring in claim 1 of the Application)

Kim, not Khedkar, teaches presenting a display that solicits input from the owner that identifies the type, cost, and timing of one or more home improvements performed on the subject home; *(see at least paragraph 36 and 37)*

It would have been obvious to try to one of ordinary skill in the art at the time of the invention to modify Khedkar with Kim, since attempting to obtain the best value for a

Art Unit: 3694

home is the goal of property appraisals.

Regarding claim 2:

Khedkar teaches/suggests a computer-readable medium whose contents cause a computing

system to perform a method for procuring information about a distinguished property from its owner that is usable to refine an automatic valuation of the distinguished property, the method comprising:

displaying at least a portion of information about the distinguished property used in the automatic valuation of the distinguished property; *(see at least col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

obtaining user input from the owner adjusting at least one aspect of information about the distinguished property used in the automatic valuation of the distinguished property; *(see at least col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*and

displaying to the owner a refined valuation of the distinguished property that is based on the adjustment of the obtained user input. *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

Regarding claim 3:

Khedkar, not Cheetham, teaches that the computer-readable medium of claim 2, further comprising: determining whether any of the altered home attributes is an attribute not

Art Unit: 3694

present among home sales used to construct the geographically-specific home valuation model; and if so, displaying a warning. (col. 5, lines 45-45 disclosing a warning occurring if not within a certain range) It would have been obvious to try to one of ordinary skill in the art at the time of the invention to provide a warning in the event a data value was not correct.

Regarding claim 4:

Khedkhar, not Cheetham, teaches that the computer-readable medium of claim 2, further comprising: determining whether the refined valuation diverges from the automatic valuation by more than a threshold percentage; and if so, displaying a warning. (col. 5, lines 45-45 disclosing a warning occurring if not within a certain range) It would have been obvious to try to one of ordinary skill in the art at the time of the invention to provide a warning in the event a data value was not correct.

Regarding claim 5:

Khedkar teaches that the computer-readable medium of claim 2 wherein the adjustment of the obtained user input includes altering property attributes used in the automatic valuation of the distinguished property, and wherein the displayed refined valuation is based at least in part on the altered property attributes. (see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12,

Art Unit: 3694

lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)

Regarding claim 6:

Khedkar teaches/suggests that the computer-readable medium of claim 2 wherein the adjustment of the obtained user input includes adding a description of an improvement to the distinguished property, and wherein the displayed refined valuation is based at least in part on a valuation of the described improvement. *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention to use Kim to suggest all the features in the claim.

Regarding claim 7:

Khedkar that the computer-readable medium of claim 2 wherein the adjustment of the obtained user input includes adding a description of an aspect of the distinguished property not considered by the automatic valuation of the distinguished property and an estimate by the owner of its value, and wherein the displayed refined valuation is based at least in part on the estimate of the value of the described aspect. *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

Regarding claim 8:

Khedkar teaches that the computer-readable medium of claim 2 wherein the adjustment of the obtained user input includes identifying recent sales of nearby properties regarded by the owner as similar to the distinguished property, and wherein the displayed refined valuation is based at least in part on a repetition of the automatic valuation of the distinguished property in which the influence of the identified sales is magnified. *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

Regarding claim 9:

Khedkar teaches/suggests that the computer-readable medium of claim 8 wherein the adjustment of the obtained user input further includes identifying a scoring of the properties sold in the identified sales reflecting the relative level of similarity of the sold properties to the distinguished property, and wherein the displayed refined valuation is based at least in part on a repetition of the automatic valuation of the distinguished property in which the influence of the identified sales is magnified in a manner consistent with the identified scores. *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

Regarding claim 10:

Kedkhar teaches that the computer-readable medium of claim 9 wherein the user input identifies a scoring of the properties sold in the identified sales reflecting the relative level of similarity of the sold properties to the distinguished property by specifying a ranked order for the identified sales. *(see at least col. 8, lines 20-40 disclosing similar houses; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

Regarding claim 13:

Khedkar teaches/suggests that the computer-readable medium of claim 8, the method further comprising displaying a table comprising rows each containing textual information about a different one of a plurality of recent sales of nearby properties, and wherein the owner identifies each recent sale of a nearby property regarded by the owner as similar to the distinguished property by interaction with the row containing information about the sale. *(see Fig. 12 disclosing similar properties and their attributes)*

Regarding claim 14:

Khedkar teaches/suggests that the computer-readable medium of claim 2 wherein the adjustment of the obtained user input includes identifying nearby properties regarded by the owner as similar to the distinguished property, and wherein the displayed refined

Art Unit: 3694

valuation is based at least in part on a repetition of the automatic valuation of the distinguished property in which the influence of values for the identified sales properties is magnified. *(see at least col. 8, lines 20-40 disclosing similar houses; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

Regarding claim 15:

Kim teaches/suggests a method in a computing system for refining an automatic valuation of a distinguished home based upon input from a user knowledgeable about the distinguished home, comprising:

obtaining user input adjusting at least one aspect of information about the distinguished home used in the automatic valuation of the distinguished home; *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

automatically determining a refined valuation of the distinguished home that is based on the adjustment of the obtained user input; and presenting the refined valuation of the distinguished home. *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

Regarding claim 16:

Art Unit: 3694

Khedkar teaches that the method of claim 15 wherein the presenting involves displaying the refined valuation of the distinguished home to a user providing the user input. (see *at least col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation*)

Regarding claim 17:

Khedkar teaches that the method of claim 15 wherein the presenting involves displaying the refined valuation of the distinguished home to a user other than the user providing the user input. *col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation*)

Regarding claim 18:

Khedkar teaches that the method of claim 15 wherein the automatic valuation of the distinguished home involves applying a geographically-specific home valuation model to attributes indicated by an external data source to be possessed by the distinguished home,

and wherein the adjustment of the obtained user input includes altering the home attributes indicated by an external data source to be possessed by the distinguished home, and wherein the determined refined valuation is based at least in part on applying the geographically-specific home valuation model to the altered attributes. (see *at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or*

Art Unit: 3694

bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)

Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention to use Kim to suggest all the features in the claim.

Regarding claim 23:

Khedkar teaches comprising weighting in the construction of the linear regression-derived function information about recent sales of individual homes near the distinguished home based upon the extents to which the sold home and the distinguished home are similar to high-value homes near the distinguished home. *(see at least col. 4 lines 1-25 disclosing weighting and col. 10, lines 20-55 disclosing homes with different evaluations)*

Regarding claim 24:

Khedkar that the method of claim 21, further comprising weighting in the construction of the linear regression-derived function information about recent sales of individual homes near the distinguished home based upon the degree of nearness of each of the sold homes to the distinguished home. *(see at least Fig. 6 and col. 9, lines 25-45 disclosing distance and col. 4, lines 1-25 using weighting with attributes such as distance)*

Regarding claim 25:

Art Unit: 3694

Khedkar teaches that the method of claim 18 wherein the geographically-specific home valuation model is constrained to consider only home attributes available for alteration by the user. *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom)*

Regarding claim 26:

Khedkar the method of claim 15 wherein the adjustment of the obtained user input includes adding a description of an improvement to the distinguished home, and wherein the determined refined valuation is based at least in part on a valuation of the described improvement. *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom)*

Regarding claim 27:

Khedkar that the method of claim 26 wherein the added improvement description identifies an improvement type and a cost for the described improvement, further comprising determining the valuation of the described improvement by applying a localized improvement cost recovery rate for the identified improvement type to the identified cost. *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation))*

Regarding claim 28:

Art Unit: 3694

Khedkar teaches that the method of claim 26 wherein the added improvement description identifies an age of the described improvement and a cost for the described improvement, further comprising determining the valuation of the described improvement by applying a depreciation schedule to the identified age and cost. *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

Regarding claim 29:

Khedkar teaches that the method of claim 15 wherein the adjustment of the obtained user input includes adding a description of an aspect of the distinguished home not considered by the automatic valuation of the distinguished home and an estimate by a user providing the user input of its value, and wherein the determined refined valuation is based at least in part on the estimate of the value of the described aspect. *(see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation)*

Regarding claim 30:

Khedkar teaches that the method of claim 15 wherein the automatic valuation of the distinguished home involves applying a geographically-specific home valuation model to attributes indicated by an external data source to be possessed by the distinguished home, and wherein the adjustment of the obtained user input includes identifying recent

Art Unit: 3694

sales of nearby homes regarded as similar to the distinguished home, the method further comprising:

constructing a new geographically-specific home valuation model that emphasizes the significance of the identified sales; (*see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation*)) and

applying the constructed new geographically-specific home valuation model to attributes of the distinguished home to obtain a result, and wherein the determined refined valuation is based at least in part on the obtained result. (*see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation*)

Regarding claim 31:

Khedkar that the method of claim 30 wherein the constructed new geographically-specific home valuation model is applied to attributes indicated by the external data source to be possessed by the distinguished home. (*see at least col. 10, lines 20-50 disclosing attributes such as the area of a bathroom or bedroom; col. 12, lines 62-65 and col. 13, lines 1-20 that disclose the Fusion system that creates a new evaluation*)

Regarding claim 32:

Khedkar that the method of claim 30 wherein the adjustment of the obtained user input further includes altering the home attributes indicated by the external data source to be
