Subject: FW: Futures View Enhancements with Development Time estimate

Since it was indicated as the essential first change, Paul has proceeded with the detaching of individual futures views, and a demo will be available shortly.

None of the other changes are especially easy. Ranking from easiest to hardest:

- 1) direction-of-last-trade indicator
- 2) volume bars, per price
- 3) visual indication of high/low range by color shading
- 4) numeric keypad and cell for preparation of a "sticky" default size
- 5) move own or remaining size to a new price
- 6) move line dividing buy/sell, rather than move prices; add button to realign to center

Which would you like added in the first cut? By importance, I would think 1,4,5. Figure about 3 man-weeks for those, starting next week.
