[Rich] Thanks.. looking good. Have an idea about creating volume for an order in this scenario. You build the stack to the length (volume it should be) off the screen (grab and drag, arrows?), then grab the bar and place in on the screen by moving it on the horizontal ( priority) scale. As you move it toward the right, you will see how your order 'stacks' up against the others, encouraging the trader to move it closer to the right. Here's another snapshot showing multiple orders stacked at the same location/value....
