> Futures View Comments

> Futures Views must be detachable
- typical height for a view was 20-25 rows, maybe 6-8 inches tall by
2-3 inches wide. A trader had 2 or 3 of these open.

Prices didn't move - the line dividing buy/sell moved.

- > Copy TT or Echo, with a few improvements,
 - especially a "sticky" value for size
 - easier way to reduce size of an existing order (with TT must bring up new "Active Order" type window to modify)
- > Much better to have visual (color change) indication of day's high/low, than to have numeric high and low figures
- > Direction of last trade is important - different color
- > Necessary to drag remaining size to a new price.
- > Need a cell in which to prepare next size, and some pre-valued buttons to populate it.
 - Clever left/right click of pre-valued size buttons to add/subtract amounts from new default.
- > (If exchange feed supported it, highlight own size in stack)
- > Volume bars, per price
- > Other
- > New KB: change the new W/OLD buttons to be the BID/ASK 1 thru 5 buttons
- > The Rosenthal techie had come up with a way for 5.3 to get just the benchmarks, by detaching multiple grid views, shrunk down to show just the benchmark.
- > Echo was cheaper than TT.
- > Don't want to see additional instruments because:
 - don't trade them
 - takes up space
 - unnecessarily allows for mistakes
- > Possibility of restricting/permitting ability to change GUI configuration per user/firm.
