v.

TRADING TECHNOLOGIES INTERNATIONAL, INC.

Patent Owner

Case CBM2016-00032
U.S. Patent 7,212,999

PATENT OWNER'S RESPONSE

Table of Contents

I.	INTRODUCTION	1
II.	RECENT § 101 CASES HAVE CLARIFIED THE TEST FOR PATENT ELIGIBILITY	3
A.	The patent’s specification is used to determine the nature of the invention.....	4
B.	Claims should not be overgeneralized or simplified into their “gist” or core principles when identifying what the claims are “directed to” under <i>Alice</i> prong I	7
C.	Claims are eligible under <i>Alice</i> prong I when the claims are directed to a particular solution to achieve a result.....	8
D.	Claims are eligible under <i>Alice</i> prong I if the claims are narrowly drawn to not preempt any and all generic enhancements	10
E.	Claims are eligible under <i>Alice</i> prong II if there is a “non- conventional and non-generic arrangement of known, conventional pieces”	11
III.	TT’S CLAIMS ARE PATENT ELIGIBLE UNDER BOTH PRONGS OF THE <i>ALICE</i> TEST	12
A.	The nature of the claimed invention is confirmed by the specification.....	13
B.	Under <i>Alice</i> prong I, the claims are “directed to” a particular structure, makeup, and functionality of a GUI and cannot be overgeneralized to being “directed to” merely a fundamental economic activity, a generic GUI, or “graphing (or displaying) bids and offers”	17
1.	The claims require constructing a GUI with a particular structure, makeup, and functionality.....	17
C.	The claims improve GUI technology	19

D.	The '999 claims are eligible under <i>Alice</i> prong I because the claims are directed to a particular solution to achieve a result	21
E.	The '999 claims are patent eligible because the combination of elements in the claims does not preempt the alleged abstract idea	22
F.	The '999 claims are eligible under <i>Alice</i> prong II because the claims set forth an inventive concept	24
IV.	TT'S CLAIMS ARE ELIGIBLE UNDER FEDERAL CIRCUIT CASE LAW REGARDING USER INTERFACE INVENTIONS.....	26
A.	Case where the interface improvement was patent eligible.....	28
1.	<i>DDR</i> : Claims to a particular way of solving a problem with interface functionality are patent eligible	28
B.	Cases where the invention was not related to the interface	31
1.	<i>Mortgage Grader</i> : The purported invention was a process for anonymous loan shopping, not a specific interface	31
2.	<i>Electric Power</i> : Claimed ancillary displaying of results, rather than a new technique or tool for how results are displayed	32
3.	<i>Affinity Labs v. DirectTV</i> : Merely claimed an interface that “allows” a step of the abstract idea to be performed	34
C.	Cases where the claims preempted the result of applying an abstract idea to an interface rather than being limited to a particular solution to achieve the result	35
1.	<i>Capital One</i> : Attempted to preempt application of pre-Internet concepts on a website	35
2.	<i>Affinity Labs v. Amazon</i> : Results-focused claim covered any form of customizing an interface	37
3.	<i>Internet Patents</i> : Claimed the result of maintaining state rather than how it was accomplished.....	39

V.	PETITIONERS MISCONSTRUE THE CLAIMS AND THE LAW TO ASSERT THAT THE CLAIMS ARE NOT PATENT ELIGIBLE.....	40
A.	Improving a computer component confers patent eligibility	40
B.	Inventions do not fail the patent-eligibility test because they can be practiced on a general-purpose computer.....	43
1.	Use of a general-purpose computer does not doom the claims	43
2.	Software inventions are patent eligible.....	43
3.	TT’s claims are not directed to using a generic computer to perform an “undisputedly well-known” practice that “humans have always performed”	44
C.	Inventions do not fail the patent-eligibility test because they benefit a human user.....	45
a.	<i>DDR</i> solved a problem realized by a website host.....	45
b.	<i>McRO</i> solved a problem realized by human animators.....	46
D.	Inventions do not fail the patent-eligibility test because a person could perform the functions manually	46
E.	<i>Ultramercial</i> ’s degree of particularity referred to extra-solution activity	47
VI.	THE PETITION FAILS TO ESTABLISH THAT THE CLAIMS COVER SIGNALS	48
VII.	THE ’999 PATENT IS NOT A CBM PATENT.....	50
A.	The ’999 patent does not claim “data processing” or “other operation” (e.g., a business method)	52
1.	The petition is completely silent as to whether the ’999 patent is directed to “data processing” or “other operations”	52

2.	The '999 patent does not claim “data processing”	53
a.	Under the USPTO’s own definition of “data processing, the '999 patent is not directed to “data processing”	53
b.	The PTAB relied upon incorrect interpretations of statements from the specification to conclude that the claim was directed to “data processing”	55
B.	The '999 patent falls under the technological exception	56
C.	Legislative history confirms that the claimed invention is not a CBM	58
VIII.	CONCLUSION.....	61

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
