FW: Futures View Enhancements with Development Time estimate

Since it was indicated as the essential first change, Paul has proceeded with the detaching of individual futures views, and a demo will be available shortly.

None of the other changes are especially easy. Ranking from easiest to hardest:

- 1) direction-of-last-trade indicator
- 2) volume bars, per price
- 3) visual indication of high/low range by color shading
- 4) numeric keypad and cell for preparation of a "sticky" default size
- 5) move own or remaining size to a new price
- 6) move line dividing buy/sell, rather than move prices; add button to realign to center

Which would you like added in the first cut? By importance, I would think 1,4,5. Figure about 3 man-weeks for those, starting next week.

A trader had 2 or 3 of these open. > Prices didn't move - the line dividing buy/sell moved. "Copy" TT or Echo, with a few improvements, - especially a "sticky" value for size - easier way to reduce size of an existing order (with TT must bring > up new "Active Order" type window to modify) > Much better to have visual (color change) indication of day's high/low, > than to have numeric high and low figures > Direction of last trade is important - different color > Necessary to drag remaining size to a new price. > Need a cell in which to prepare next size, and some pre-valued buttons to -Clever left/right click of pre-valued size buttons to add/subtract > amounts from new default. > (If exchange feed supported it, highlight own size in stack) > Volume bars, per price

PLAINTIFF'S TRIAL EXHIBIT 81

eS0019878

```
> Other
> New KB: change the new WI/OLD buttons to be the BID/ASK 1 thru 5 buttons
> The Rosenthal techie had come up with a way for 5.3 to get just the
> benchmarks, by detaching multiple grid views, shrunk down to show just the
> benchmark.
> Echo was cheaper than TT.
> Don't want to see additional instruments because:
- don't trade them
- takes up space
- unnecessarily allows for mistakes
> Possibility of restricting/permitting ability to change GUI configuration
> per user/firm.
> TT displays prices "faster" than eSpeed
