Paul was basically asking if we could **make our futures screen look like TT**. I suggest we create a portfolio for the next demo which **color codes the bid and offer columns separately** (might as well use TT's blue/red scheme) and **have as close a look and feel as possible to TT's**. Will get his attention.

* * * * *

... again, **he's trying to achieve similar look and feel as his current screen (TT)**

* * * * *

... asking for TT's "Tradebook" functionality. This is an extension of the Trade History window (TT's Fill window).... Joe and I discussed this as it pertains to eSpeedFX. See Product Tour on TT web site.
