III. Maes In View Of The '585 Reference Discloses A “Secure Registry.”	4
IV. Maes In View Of The '585 Reference Discloses The Claimed “Encrypted Authentication Information.”	6
V. A POSITA Would Have Applied The '585 Reference’s Teachings To Maes Because Both References Include Secure Registries That Receive And Decrypt Information To Authenticate The User.....	7
VI. Maes Only Suggests that Physical Components Should Remain Compatible With Existing Infrastructure, Not Server Software.	9
VII. Combining The '585 Reference’s Authentication Codes With Maes’ Authentication System Would Have Improved The Security Of Maes.	12
A. A POSITA Would Have Understood That The '585 Reference’s Multi-factor Authentication Code Is More Secure Than The Encrypted Information Of Maes.....	12
B. The '585 Reference’s Authentication Codes Would Have Added Security To Maes’ Digital Certificate System.....	13
VIII. Combination Function 230 Teaches That Inputs Can Be Combined, Including Secret Information And Identifying Information.	14
IX. Maes Discloses Displaying Indicators For The Plurality Of Accounts.	14
X. Maes Discloses De-Activating The Electronic ID Device.....	17
XI. The '585 Reference Discloses Generating The Claimed Seed.	17
XII. Maes And The '585 Reference Disclose The Claimed Act Of Generating Encrypted Authentication Information.	19
XIII. Maes In View Of Maritzen Discloses Not Permitting The Entry Of User Input.	20

XIV. A POSITA Would Not Have Been Dissuaded From Applying Maritzen’s Teachings To Maes Based On Immaterial Design Differences.....21

XV. Maes Discloses Displaying Options For Purchase.....22

XVI. A POSITA Would Not Have Been Dissuaded From Applying Labrou’s Teachings To Maes Based On Immaterial Design Differences.....23

XVII. USR Failed To Demonstrate Secondary Considerations Of Non-Obviousness.24

XVIII. Conclusion.....26

I. Introduction

USR's Patent Owner Response ("POR") fails to rebut Petitioner's showing that the challenged claims are unpatentable. First, USR's assertion that the claimed invention is a "technological solution" fails because, as the Board already determined, "each [of the] steps uses a technological feature that was known in the art [and] the steps appear to be implemented in a conventional manner." DI, 12-13. Second, USR mischaracterizes the prior art references and the creativity and technical ability of persons having ordinary skill in the art. Finally, USR fails to demonstrate any secondary considerations of non-obviousness whatsoever.

II. The Board Correctly Found The '813 Patent To Be CBM Review Eligible.

A. The '813 Patent As A Whole Claims Subject Matter That Was Known And Obvious.

Despite the Board previously rejecting USR's argument that the '813 patent is ineligible for CBM review—finding that each claimed step uses a feature "that was known in the art" and that was "conventional"—USR wastes nearly half of its POR recycling its argument that the '813 patent solves a technical problem with a technical solution. DI, 12-13; Ex-1201, '813 patent, 43:54-44:7; Pet. 14.

Unsurprisingly, even USR's own expert, Dr. Jakobsson, admits that all the technology used by the '813 patent—from the hardware components, to the communication interface, to the database and encryption techniques—was known.

Ex-1227, Jakobsson-Dep., 307:11-17 ('813 patent uses conventional biometric

sensors), 308:19-21 ('813 patent uses a conventional user interface), 308:25-309:2 ('813 patent uses conventional fingerprint sensors), 309:16-18 ('813 patent uses conventional processors), 311:3-5 ('813 patent discloses no improvements to hardware), 312:3-5 ('813 patent discloses no new form of communication interface), 312:21-25 ('813 patent can be used with any form of database), 313:21-314:17 ('813 patent discloses no new form of encryption), 315:10-14 (temporary disabling of a device was prior art), 319:10-12 (point-of-sale terminals were prior art), 322:5-13 (multifactor authentication involving biometric information was prior art), 323:17-22 (authentication based on a time-varying token was prior art), 330:10-15 (limiting functionality of a user device based on a failed authentication was prior art), 355:22-356:2 (PIN and biometric based authentication was prior art); 357:9-11 (local authentication was prior art), 460:20-461:2 (combining local and remote authentication was prior art).

B. The Board Need Not Consider Whether The '813 Patent Is A Technical Solution To A Technical Problem.

Under 37 C.F.R. Section 42.401, CBM Review is inapplicable for patents directed toward “technological inventions” that either (1) claim subject matter that “as a whole recites a technological feature that is novel or unobvious over the prior art” or (2) “solves a technical problem using a technical solution.” 37 C.F.R. § 42.401. The Board need not consider the second prong if, as here, the patent only recites technological features that were known or obvious. Final Written Decision,

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
