-> Does anyone have Ziplab working on a BBS besides PC-Board. Or
-> is there another program that will do a similiar job. I can
-> produce a DORINFOx.DEF or DOOR.SYS file preferably. Thanks for the
-> info.

Look into FWKCS117.ZIP:

FWKCS(TM) Contents_Signature System, 1.17.
1992 Feb 12. For automatically processing
uploaded files on BBS: catches duplicate or
redundant files; tests sufficient novelty;
supports virus_testing for full DOS tree of
subdirectories uploaded in zipfile, while
preserving the AV stamp; tests AV stamps;
provides remote searching for files; many
other features. Multi-BBS support.
