Subject: Cell free fetal DNA analysis for Down Syndrome

Hi all,

I just completed a preliminary IRB for the cell free fetal DNA analysis. It is protocol number 8412 in the Stanford human subjects website. All of you are listed on the IRB. Please feel free to enter the site and make any changes you see fit. I am also attaching a copy of the consent form for your review. I appreciate any input you may have.

Thank you,

Yair Blumenfeld
