Sir:

This communication is responsive to the Final Office Action dated December 18, 2003, concerning the above-referenced patent application, making February 18, 2004, two months from the mailing date. Accordingly, this Amendment and Reply is timely filed.

Amendments to the Claims are reflected in the listing of claims which begins on page 2 of this document.

Remarks/Arguments begin on page 6 of this document.

Please amend the application as follows:

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

In accordance with 37 CFR § 1.121, please substitute for original claims 1-20, the following rewritten versions of the same claims, as amended.

Please amend the following claims.

1. (Currently amended): A printing and publishing system providing prepress, content management, infrastructure, and workflow services to system subscribers in real time using a communication network, the printing and publishing system comprising:

an end user facility coupled to a communication network, the end user facility providing page building operations, the page building operations including the design and construction of pages from images, text, and data available via said communication network and the generation of a portable document format (PDF) file;

a printing company facility coupled to said communication network, the printing company facility providing imposition operations and generating a plate-ready file from said PDF file, the imposition operations including the setting of pages on a particular plate as well as positioning and orientation of pages on said plate; and

a central service facility coupled to said communication network, the central service facility providing storage, file processing, remote access, and content management operations; the content management operations including the capture, organization, archival, retrieval, and reuse of electronic files containing any one of text, graphics, photos, artwork, full pages, audio, video, and completed projects; content management operations further including the organization and cataloging of file content for browsing, searching, and retrieving of files and data.

2. (Original): The printing and publishing system of claim 1, wherein the end user facility further comprises a communication routing device coupling the end user facility to the communication network, a computer which performs page building operations, and a proofreader which provides printed samples of pages.

3. (Original): The printing and publishing system of claim 2, wherein the routing device is connected to an asynchronous transfer mode (ATM) switch.

4. (Previously Presented): The printing and publishing system of claim 1, wherein the printing company facility further comprises a communication routing device coupling the printing company facility to the communication network, a computer which performs imposition operations, and a platesetter which exposes a printing plate.

5. (Original): The printing and publishing system of claim 1, wherein the central service facility further comprises a communication routing device coupling the central service facility to the communication network, a server which performs content management operations, and storage devices which contain electronic files.

C1

6. (Original): The printing and publishing system of claim 1, wherein the central service facility further comprises a network including fast Ethernet and communication ports.

7. (Original): The printing and publishing system of claim 1, wherein the communication network includes any one of data packets associated with a packet switched network and data cells associated with a cell switched network.

8. (Original): The printing and publishing system of claim 7, wherein the cell switched network comprises an asynchronous transfer mode (ATM) network.

9. (Original): The printing and publishing system of claim 1, wherein the central service facility are remotely located from the end user facility and printing customer facility.

10. (Original): A method of providing printing and publishing services to a remote client in real time using a communication network, the method comprising:  
storing files on a computer server, the files containing information relating to images, text, art, and data;

providing said files to a remote client for the designing of a page layout;

generating a portable document format (PDF) file from the designed page layout;

generating a plate-ready file from said PDF file; and  
providing said plate-ready file to a remote printer.

11. (Original): The method of claim 10, further comprising providing said PDF file to said remote client for proofing and revision of the page layout.

12. (Original): The method of claim 10, wherein the step of providing said plate-ready file to a remote printer comprises communicating said plate-ready file to said remote printer via a communication network.

C 1  
13. (Original): The method of claim 10, wherein the step of providing said files to a remote client for the designing of a page layout comprises providing access to a database containing said files over a communication network.

14. (Original): The method of claim 10, wherein the step of generating a plate-ready file from said PDF file comprises converting said PDF file to a PostScript file.

15. (Original): The method of claim 10, wherein the step of storing files on a computer server comprises logging said files into a content management database.

16. (Original): A method of providing printing and publishing services to a remote client performing any one of page layout designing and plate press printing where said printing and publishing services are provided in real time using a wide area communication network, the method comprising:

- storing high resolution files on a computer server;
- generating low resolution files corresponding to said high resolution files;
- providing said low resolution files to a remote client for the designing of a page layout;
- generating a portable document format (PDF) file from the page layout designed by said remote client;
- providing said PDF file to said remote client; and
- providing a plate-ready file to a remote printer.

Atty. Dkt. No. 014530-0269

17. (Original): The method of claim 16, wherein the low resolution files are stored in a storage device at said remote client.

18. (Original): The method of claim 16, wherein the step of generating a portable document format (PDF) file from the page layout designed by said remote client comprises receiving a PostScript file from said remote client via the communication network; and swapping said low resolution files used in said page layout with said high resolution files.

19. (Original): The method of claim 16, wherein the step of providing a plate-ready file to a remote printer comprises converting the format of the PDF file to a plate-ready file format and communicating the plate-ready file to the remote printer via the communication link.

20. (Original): The method of claim 16, wherein the step of storing files on a computer server comprises logging said files into a content management database according to user profiles and attributes.

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
