The exhibits, was there some reason for not submitting them as supplemental information within a month of the decision?

MR. FEHRMAN: Yes, your Honor. They were in response to the submissions, the declaration and supporting evidence made by the patent owner's expert in terms of what one of ordinary skill in the art would take as the meaning of "playlist". And it

First of all, we believe that reply is improper because it supposes brand new claim construction. It is not that the reply adopts the board's construction or merely attacks the proposed construction advanced by the patent owner, it proposes a brand new construction on reply and submits no declaration.

So there is no expert that we could cross examine or on whose testimony we could submit observations on cross examination. So basically the patent, the petitioner's position

is the last word and it stands unrebutted. And for that reason, it is simply improper. That's one point.

And with respect to the point of the issue of claim construction, we had an e-mail correspondence exchange where petitioner's counsel responded on the issue of claim construction and the three exhibits that were used in support of that issue.

JUDGE McNAMARA: Let me ask the petitioner: Patent owner makes an interesting point with respect to the fact that you are proposing a new construction here.

What do you say to that?
MR. FEHRMAN: Your Honor, it is not a brand new construction. In the institution decision, the board adopted a construction which we think in many aspects is correct, but there are some direct inconsistencies in the specification itself. And because of that, we pointed that out, that that

construction was adopted for the first time in the institution decision.

It seems that this is the appropriate time for us to provide our opinion as to the correct construction rather than just sit on the sidelines because the patent owner was the first one to raise that issue, that term as a construction issue.

MS. GLADSTEIN: Your Honor, construction of the term "playlist" was raised in the preliminary response and then the board issued its decision on institution construing the term "playlist".

A brand new construction on the reply at this phase of the proceeding is simply prejudicial. And we have no meaningful opportunity to respond to the propriety of the proposed construction.

JUDGE McNAMARA: Okay. All right.

Let's hear, I guess, the other

two cases that you wanted to talk about, '597 and '598.

MS. GLADSTEIN: With respect to the '598 and '597, the first issue that I will raise is, again, with respect to claim construction and essentially for the same reasons.

Let me take a step back.

On reply, the petitioner submitted two new exhibits. Again, it's a Microsoft patent application and the Apple patent in support of a different construction of the term "playlist". And our issue is that aside from the fact that the Microsoft patent application and the Apple patent are improper extrinsic evidence in support of claim construction, petitioner relies solely on attorney argument to interpret these new exhibits.

Petitioner could have presented these documents when it cross-examined patent owner's expert on July 28th and Page 13

29th, but didn't, and is submitting brand new exhibits that it purports to rebut the positions that we have taken on claim construction.

It is new evidence that is belatedly presented and is objectionable because we have no way of responding to the impropriety of using another inventor's patent application and the patent in support of the claim construction of a different patent.

They have not -- that is one issue with respect to the '597 and '598 of the IPRs.

And the last issue solely with respect to the '598 IPR is a new argument and new exhibits that were introduced on reply with respect to the prior art reference. That was one of the references on the ground of unpatentability on which that decision was instituted.

the '598 IPR, petitioner presents a new unsupported attorney argument and new exhibit, Exhibit 1022, which I will refer to as the Motorola reference for the preparation that, and it's a quote, "It appears that the Bi's navigator was essentially a form of PDA."

It is the patent owner's position that this is improper rebuttal and points to new argument and evidence in support of petitioner's case in chief.

As I just mentioned, petitioner did not submit an expert declaration in support of its new theory. In fact, petitioner's expert did not opine in the original declaration submitted with the petition that the navigator of Bi appears to be a PDA. As such, patent owner and its expert never had an opportunity to respond.

Moreover, this new argument in evidence is not responsive to the

patent owner's response, which argued that the petitioner provided no evidence why a person of ordinary skill in the art would have been motivated to replace the dedicated navigator of Bi for the general purpose remote control of Ericsson to arrive at the claims of the '873 patent.

As such, the petitioner's new argument and new evidence is improper and should be stricken.

Additionally, with its original petition, petitioner submitted a 13-page expert declaration in support of eight different grounds of patentability. And only three short paragraphs of that 13-page declaration were allocated to the analysis of the combination of the Bi and Ericsson reference.

JUDGE McNAMARA: It sounds like at this point we're getting into the motion. This is only a conference as

Page 16

PROCEEDINGS to authorization to file a motion.

Let me hear about the petitioner's response to that.

MR. FEHRMAN: Yes, your Honor. I'll first respond to the discussion about Bi.

The patent owner declares that Loy provided a declaration with over 100 paragraphs. At paragraph 107, Loy was specific in discussions about the Bi navigator and the difference between Bi and Ericsson and made assertions regarding that.

So in direct response to his discussions regarding the scope of the Bi reference, we submitted in response a data sheet that shows -- that discusses the processor that Bi identified as being used in its product. The data sheet speaks for itself. There is no requirement that an expert then opine. The board can determine what weight is to be given

to the data sheet or not. But it was

clearly in direct response to the arguments made by the patent owner and was appropriate in that regard.

And there is a recent case, GE Vibrant Media v. PE, IPR 2013-00172, and it says, "The need for relying on evidence not previously discussed in the petition may not exist until a certain point has been raised and the patent owner responds."

Much depends on the specific argument in the patent owner response. And this is one of the clearest of it was in direct response to assertions made regarding the scope and content of the Bi prior art reference.

JUDGE McNAMARA: Okay.

MR. FEHRMAN: Now, with respect to the patents and patent applications referred to, again, the patent owner provided arguments and their evidence that they best afforded their position on playlist, and stated so through declarations after the testimony and
