Guide to Network Resource Tools

Status of this Memo

This memo provides information for the Internet community. This memo does not specify an Internet standard of any kind. Distribution of this memo is unlimited.

Table of Contents

1. Introduction	4
2. GOPHER	5
2.1. What is Gopher	5
2.2. Who can use Gopher	6
2.3. How to get to Gopher	6
2.3.1. Local clients	6
2.3.2. Remote clients	6
2.4. Using Gopher	7
2.5. VERONICA	10
2.6. Learning more about Gopher	11
3. WORLD-WIDE WEB	12
3.1. What is World-Wide Web	12
3.2. Who can use World-Wide Web	13
3.3. How to get to World-Wide Web	14
3.3.1. Local clients	14
3.3.2. Remote clients	14
3.3.2.1. E-mail access	15
3.4. Using World-Wide Web	16
3.5. Examples	19
3.6. Learning more about World-Wide Web	22
4. WAIS	22
4.1. What is WAIS	22
4.2. Who can use WAIS	23
4.3. How to get to WAIS	23
4.4. Using WAIS	23
4.4.1. E-mail access	24
4.5. Examples	25
4.6. Learning more about WAIS	26
5. ARCHIE	27
5.1. What is ARCHIE	27
5.2. Who can use ARCHIE	27
5.3. How to get to ARCHIE	28

5.4. Using ARCHIE	29
5.4.1. Using a local client	29
5.4.1.1. Archie client command and parameters	29
5.4.2. Using Telnet	31
5.4.3. Using electronic mail	34
5.5. Examples	36
5.6. Learning more about ARCHIE	37
6. WHOIS	38
6.1. What is WHOIS	38
6.2. Who can use WHOIS	39
6.3. How to get to WHOIS	39
6.4. Using WHOIS	39
6.4.1. Using a local client	40
6.4.2. Using Telnet	41
6.4.3. Using electronic mail	43
6.5. Examples	44
6.6. Learning more about WHOIS	45
7. X.500	45
7.1. What is X.500	45
7.2. Who can use X.500	46
7.3. How to get to X.500	46
7.4. Using X.500	47
7.4.1. Using a local client	47
7.4.2. Using Telnet or X.25	48
7.4.3. Using electronic mail	50
7.5. Examples	50
7.6. Learning more about X.500	53
8. NETFIND	53
8.1. What is NETFIND	53
8.2. Who can use NETFIND	54
8.3. How to get to NETFIND	54
8.4. Using NETFIND	55
8.4.1. Local access	55
8.4.2. Remote access	58
8.5. Examples	58
8.6. Learning more about NETFIND	59
9. TRICKLE	60
9.1. What is TRICKLE	60
9.2. Who can use TRICKLE	60
9.3. How to get to TRICKLE	61
9.4. Using TRICKLE	61
9.5. Examples	65
9.6. Learning more about TRICKLE	65
10. BITFTP	65
10.1. What is BITFTP	65
10.2. Who can use BITFTP	66
10.3. How to get to BITFTP	66
10.4. Using BITFTP	66

10.5. Examples	69
10.6. Learning more about BITFTP	70
11. LISTSERV (Version 1.7f).	70
11.1. What is LISTSERV	70
11.2. Who can use LISTSERV	71
11.3. How to get to LISTSERV	71
11.4. Using LISTSERV	73
11.4.1. Commands for LISTS	74
11.4.2. Commands for FILES	79
11.4.3. LISTSERV DATABASE Functions	84
11.4.4. Commands for INFORMATION	85
11.5. Examples	85
11.6. Learning more about LISTSERV	87
12. NETNEWS (USENET)	87
12.1. What is NETNEWS	87
12.2. Who can use NETNEWS.	88
12.3. How to get to NETNEWS	89
12.4. Using NETNEWS	89
12.5. Examples	91
12.6. Learning more about NETNEWS	93
13. OTHER TOOLS OF INTEREST	93
13.1. ASTRA	93
13.1.1. What is ASTRA	93
13.1.2. How to get to ASTRA	94
13.1.3. Learning more about ASTRA	94
13.2. NETSERV	94
13.2.1. What is NETSERV	94
13.2.2. How to get to NETSERV	95
13.2.3. Learning more about NETSERV	96
13.3. MAILBASE	96
13.3.1. What is MAILBASE	96
13.3.2. How to get to MAILBASE	96
13.3.3. Learning more about MAILBASE	96
13.4. PROSPERO	97
13.4.1. What is PROSPERO	97
13.4.2. How to get to PROSPERO	97
13.4.3. Learning more about PROSPERO	98
13.5. IRC	98
13.5.1. What is IRC	98
13.5.2. How to get to IRC	99
13.5.3. Learning more about IRC	99
13.6. RELAY	99
13.6.1. What is RELAY	99
13.6.2. How to get to RELAY	100
13.6.3. Learning more about RELAY	101
14. Security Considerations	101
15. References	101
16. Acknowledgements	102

17. Author's Address	102
18. Appendix A - Freely available networking software	103
18.1. Gopher clients	103
18.2. World-Wide Web clients	104
18.3. WAIS clients	105
18.4. Netnews - news reader software	106

1. Introduction

As the worldwide academic computer network grows and expands far beyond its previous confines, so the resources and services available on the network evolve and multiply at a dizzying rate. The typical user is hardpressed to keep up with this explosive growth.

Fortunately, a number of tools are available to facilitate the task of locating and retrieving network resources, so that users anywhere can utilize texts, data, software and information for public access. Facilities to explore public domain software repositories, to consult mailing list archives and databases, to retrieve directory information and to participate in global group discussions are now available to all.

The key to exploiting these resources is a server, special software on a computer somewhere in the network which accepts requests (or queries or commands) and sends a response automatically. The requestor does not have to be working on the same computer (or even in the same part of the world) in order to use the server. Many servers accept requests via electronic mail, so that often the requestor needs not even be on the same computer network as the server. In many cases, servers are interconnected so that once you have established contact with one server, you can easily communicate with other servers as well.

Today, many users have powerful computers on the desktop, with advanced graphical, audio and storage capabilities, which are connected to the network. This fact has given rise to what is known as the client-server model. Users can have special software on their local computer called a client which can utilize the capabilities of that computer and can also communicate with a server on the network. These clients provide an easy-to-use, intuitive user interface, allow use of pointing devices such as a mouse, and exploit other local features. The client sends the user's requests to a server using a standardized format (called a protocol) and the server sends its response in a condensed format which the client displays to the user in a more readable way.

Several of the tools described herein have several different functions. However they could be classified in functional areas according to their main purpose. Sections two and three cover two

services, Gopher and World-Wide Web, which use the client-server model to explore the network providing a means of moving through a wide range of network sources and resources in a uniform and intuitive way. A tool for searching in a wide range of different databases located throughout the network, WAIS, is documented in section four. The problem of knowing where to find network resources (files and programs) is addressed in section five, which deals witharchie. Three tools for finding people, computers and their network addresses, WHOIS, X.500 and Netfind, are discussed in sections six, seven and eight. While just about all of these network tools can be used to get files of one sort or another, there are a few servers available for getting files easily and efficiently from various repositories in the network. Two of these servers, TRICKLE and BITFTP, are covered in sections nine and ten. Sections eleven and twelve deal with what is perhaps the most popular of all the network resources, discussion groups on every imaginable topic. The two tools discussed there are LISTSERV and Netnews (Usenet). Section thirteen gives brief descriptions and pointers for a number of tools which were not mainstream enough to get a full description. Some are still in the developmental stage (Prospero), some are relatively unknown outside a particular network (ASTRA and Netserv from EARN/Bitnet and Mailbase from JANET) and some are meant for chatting rather than work (Relay and IRC).

The purpose of this guide is to supply the basic information that anyone on the network needs to try out and begin using these tools. A basic knowledge of networking terminology has been assumed, as well as familiarity with the basic tools of networking: electronic mail (often referred to as e-mail or simply mail throughout this guide) and, for those connected to the Internet, FTP (file transfer protocol) and Telnet (remote login). It is beyond the scope of this guide to describe these basic tools. The example in the BITFTP section of this guide shows how one can use BITFTP to get guides to these tools over the network.

2. GOPHER

2.1. What is Gopher

The Internet Gopher, or simply Gopher, is a distributed document delivery service. It allows users to explore, search and retrieve information residing on different locations in a seamless fashion.

When browsing it, the information appears to the user as a series of nested menus. This kind of menu structure resembles the organization of a directory with many subdirectories and files. The subdirectories and the files may be located either on the local server site or on remote sites served by other Gopher servers. From the user point of

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
