Low Profile
Synchro/Resolver-to-Digital Converter

SDC1700/1702/1704 SERIES

FEATURES
Internal Microtransformers for 60Hz, 400Hz and 2.6kHz References
Low Profile (0.4")
10-, 12- or 14-Bit Resolution for 360°
High Tracking Rates (75 revs/sec)
Voltage Scaling with External Resistors (Unique Feature)
DC Voltage Output Proportional to Angular Velocity
Low Cost
Lightweight 3oz. (85 grams)
MIL Spec/Hi Rel Options Available

APPLICATIONS
Servo Mechanisms
Retransmission Systems
Coordinate Conversion
Antenna Monitoring
Simulation
Industrial Controls
Fire Control Systems
Machine Tool Control Systems

GENERAL DESCRIPTION
The SDC1700, SDC1702 and SDC1704 are modular, continuous tracking Synchro/Resolver-to-Digital Converters which employ a type 2 servo loop.

They are intended for use in both Industrial and Military applications.

The input signals can be either 3 wire synchro plus reference or 4 wire resolver plus reference, depending on the option. The outputs will be presented in TTL compatible, parallel natural binary.

One of the outstanding features of the converters is the use of precision Scott T and reference microtransformers. *This has made it possible to include the transformers within the module, even on the 60Hz option, and yet still maintain the profile height of 0.4".*

Particular attention has been paid in the design, to achieving the highest tracking rates and accelerations possible, compatible with the resolution and carrier frequency used, while at the same time obtaining a high overall accuracy.

When SDC's are used in control loops, it is often useful to have a voltage which is proportional to angular velocity. This voltage is available and has been brought out on all the SDC1700 converters.
Extended temperature range versions of all the converters are available.

MODELS AVAILABLE
The three Synchro-to-Digital Converters described in this data sheet differ primarily in the areas of resolution, accuracy and dynamic performance as follows:

Model <u>SDC1702XYZ</u> is a 10-bit converter which has an overall accuracy of ±22 arc-minutes and a resolution of 21 arc-minutes.

Model <u>SDC1700XYZ</u> is a 12-bit converter with an overall accuracy of ±8.5 arc-minutes and a resolution of 5.3 arc-minutes.

Model <u>SDC1704XYZ</u> is a 14-bit converter with an overall accuracy of ±2.2 arc-minutes ±1LSB and a resolution of 1.3 arc-minutes.

The XYZ code defines the option thus: (X) signifies the operating temperature range, (Y) signifies the reference frequency, (Z) signifies the input voltage and range, and whether it will accept synchro or resolver format.

More information about the option code is given under the heading of "Ordering Information".

NOTE
For all the standard options, no external transformers are needed with these converters.

NOTES
*Specifications same as SDC1702.
[1] Specified over the appropriate operating temperature range of the option and for:
(a) ±10% signal and reference amplitude variation (b) 10% signal and reference
Harmonic Distortion (c) ±5% power supply variation (d) ±10% variation in reference
frequency.
[2] It is recommended that buffers should be used if the above converters
are required to drive over a distance greater than 6".

DOCKET ALARM

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming inter-face) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
