ART UNIT	PAPER NUMBER
2837	

MAIL DATE	DELIVERY MODE
10/31/2007	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No. 10/765,487	Applicant(s) BOISVERT ET AL.
Examiner Marlon T. Fletcher	Art Unit 2837

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 20 June 2007.
- 2a) This action is **FINAL**.
- 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-37 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1-37 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) All b) Some * c) None of:
1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. _____.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) Notice of Informal Patent Application
- 6) Other: _____

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-23 and 28-35 are rejected under 35 U.S.C. 102(b) as being anticipated by Okuyama et al. (4,608,637)

As recited in claims 1 and 2, Okuyama et al. disclose an apparatus for controlling motion of a motor driven element over a range of motion and for altering said motion when undesirable resistance to the motion is encountered, said apparatus comprising: a sensor (6a, 6ab, 6d, 6da) for measuring a parameter of a motor coupled to the motor driven element that varies in response to a resistance to motion during all or part of a range of motion of the motor driven element (column 7, lines 49-62); a memory for storing a number of measurement values from the sensor based on measurements of said parameter over at least a portion of the range of motion (column 8, line 51-64); a controller (microcomputer 9) coupled to the memory for determining to de-activate the motor based on the measurement values stored in the memory as the motor driven element moves over its range of motion; and a controller interface coupled to the motor (Ma, Md, Mab, Mda) for altering motion of said motor driven element in response to a

determination made by the controller (column 5, lines 9-60), wherein altering is also in response to a determination that the parameter is outside the parameter range.

As recited in claims 3 and 31, Jones et al. disclose the method, wherein the motor driven element is a window or panel and additionally comprising reverse actuating the window or panel prior to moving said window or panel in a direction to close the window or panel (column 6, lines 24-33).

As recited in claim 4, Jones et al. disclose the method, additionally comprising maintaining a position of the window or panel based on the sensed parameter and the reverse actuation is initiated if a leading edge of the window or panel is near a closed position (column 6, lines 24-33).

As recited in claims 5, 10, and 11, Jones et al. disclose the method, movement is first initiated toward a closed position when a leading edge of the window or panel is near the closed position and wherein the reverse actuation is performed upon a sensing of an obstacle that is based on determining the parameter is outside the parameter range (column 7, lines 49-62).

As recited in claims 6 and 33, Jones et al. disclose an apparatus for controlling activation of a motor coupled to a motor vehicle window or panel for moving said window or panel along a travel path and deactivating the motor if an obstacle is encountered by the window or panel, said apparatus comprising: a sensor for sensing movement of the window or panel and providing a sensor output signal related to a speed of movement of the window or panel (discussed above; column 7, lines 30-37), and a controller having an interface coupled to the sensor and the switch for controllably

energizing the motor (figure 4a); said controller sensing a collision with an obstruction when power is applied to the controller by: monitoring movement of the window or panel by monitoring a signal from the sensor related to the movement of the window or panel (column 7, lines 6-23; and column 8, lines 35-50), identifying a collision of the window or panel with an obstacle due to a change in the signal from the sensor that is related to a change in movement of the window or panel (Abstract; and column 8, lines 51-64); and outputting a control signal to said switch to deactivate said motor in response to a sensing of a collision between an obstacle and said window or panel (column 8, line 65 – column 9, line 7).

As recited in claims 7, 29, and 35, Jones et al. disclose the apparatus, wherein the controller comprises a programmable controller including a processing unit for executing a control program and including a memory for storing multiple window or panel speed values corresponding to a signal received from the sensor (column 6, lines 52-60).

As recited in claims 8 and 30, Jones et al. disclose the apparatus, additionally comprising one or more limit switches (11) for use by the controller to determine window or panel position for use in identifying a collision.

As recited in claim 9, Jones et al. disclose the apparatus, wherein the control program adjusts an obstacle detection threshold in real time based on immediate past measures of the signal sensed by the sensor to adapt to varying conditions encountered during operation of the window or panel (column 8, lines 65 – column 9, line 7).

As recited in claims 12, 19, 20, and 28, Jones et al. disclose apparatus for

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
