(54) Golfing data recorder

(57) Data on golf play is recorded by apparatus carried by a player and comprised of an input unit A, B to be operated by the player at each place where a stroke is played, a global-positioning-satellite (GPS) receiver unit, and a unit for measuring the locations of the apparatus by means of the GPS receiver in response to operation of the input unit and for storing the location, score and club selection data. The data stored may be displayed at 20, or transferred to a base computer after the game for processing and display of the successive play locations superimposed over a simulated map of a golf course. The apparatus may be mounted on the player's belt E.

The GPS receiver may operate in conjunction with a fixed receiver at the clubhouse, to provide a differential positioning system of greater accuracy.
