

UNITED STATES PATENT AND TRADEMARK OFFICE

BEFORE THE PATENT TRIAL AND APPEAL BOARD

IRON DOME LLC
Petitioner
v.

E-Watch, INC.
Patent Owner

Case: IPR2014-00439

Patent No. 7,365,871

**Title: Apparatus For Capturing, Converting And Transmitting A Visual Image
Signal
Via A Digital Transmission System**

**DECLARATION OF MICHAEL FORMAN
PURSUANT TO 28 U.S.C. §1746 AND 37 C.F.R. §1.131**

E-Watch, Inc.
Exhibit 2018
Petitioner - Iron Dome LLC
Patent Owner - E-Watch, Inc.
IPR2014-00439

I, Michael Forman, pursuant to the provisions of 28 U.S.C. § 1746 and 37 C.F.R. §1.131, declare:

1. My name is Michael Forman.
2. I am over the age of 21 years of age and am competent to make this declaration.
3. I worked as an employee of PhotoTelesis from August 15, 1994 to 2005.
4. I worked under the direction of David Monroe during my time at PhotoTelesis Corporation.
5. My role/job description was an Electrical Engineer. During my time at PhotoTelesis, I helped work on circuits and processors related to image processing for product development projects having designations such as, for example, HCT (Handheld Communications Terminal), Micro-RIT (Micro Remote Image Transceiver), Military Micro-RIT, and PICS (Portable Image Computer System). Based on my direct knowledge of these product development projects and my understanding of United States patent no. 7,365,871 (“the ’871 patent”), all of these product development projects involved the development of inventive subject matter utilized in the reduction to practice of elements of the invention of David Monroe as claimed in claims 1-15 of the ’871 patent.
6. The HCT product development project was directed to an apparatus in the form of a handheld unit attachable to an external camera. This apparatus had a housing with the following components contained therein:
 - a. a processor,
 - b. a memory,

- c. a removable memory module in addition to the memory,
- d. a user interface, and
- e. a display comprising a window in which content can be displayed.

Examples of functionalities provided by this apparatus included:

- a. interfacing with an external camera to capture a visual image,
- b. displaying a visual image framed by the camera on the display,
- c. the processor generating an image data signal representing a visual image framed by the camera (i.e., a digitized framed image),
- d. the memory receiving and storing digitized framed images for allowing the digitized framed images to be accessible for selectively displaying in the display window and accessible for selectively transmitting over a wireless telephone network,
- e. the user interface enabling a user to select an image data signal (i.e., for a particular one of a plurality of digitized framed images) for viewing and transmission,
- f. displaying a visual image on the system whereby the visual image can be viewed and framed prior to capture in the memory,
- g. the removable memory being removably housed in the housing for storing captured image data signals, the display being operable to display for viewing incoming image data signals,
- h. the display window for viewing the alphanumeric signals within the display window used for framing the visual image, and

- i. the display providing for framing a visual image to be captured by the camera and for viewing a resulting digitized framed image.

Based on my direct knowledge of the HCT product development project and my understanding of the '871 Patent, the HCT product development project resulted in the creation of subject matter utilized in the reduction to practice of the invention as recited in at least claims 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 13, and 14 of the '871 patent.

7. The PICS product development project was directed to an apparatus in the form of a portable laptop unit having a camera within the housing. This apparatus had a housing with the following components contained therein:

- a. a power supply,
- b. an integral image capture device including an electronic camera,
- c. memory,
- d. a display comprising a window in which content can be displayed,
- e. a user interface, and
- f. alphanumeric input keys.

Examples of functionalities provided by this apparatus included:

- a. the camera contained in the housing capturing a visual image,
- b. displaying a visual image framed by the camera on the display,
- c. the processor generating an image data signal representing a visual image framed by the camera (i.e., a digitized framed image),
- d. the memory receiving and storing digitized framed images for allowing the digitized framed images to be accessible for selectively displaying in the

display window and accessible for selectively transmitting over a wireless telephone network,

- e. the user interface enabling a user to select a image data signal (i.e., for a particular one of a plurality of digitized framed images) for viewing and transmission,
- f. the alphanumeric input keys permitting manually input digitized alphanumeric signals to be input to the processor,
- g. the power supply providing power for operation of the apparatus
- h. displaying a visual image on the system whereby the visual image can be viewed and framed prior to capture in the memory,
- i. the display window for viewing the alphanumeric signals within the display window used for framing a visual image, and
- j. the display providing for framing a visual image to be captured by the camera and for viewing a resulting digitized framed image.

Based on my direct knowledge of the PICS product development project and my understanding of the '871 Patent, the PICS product development project resulted in the creation of subject matter utilized in the reduction to practice of the invention as recited in at least claims 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 13, and 14 of the '871 patent.

8. The Military Micro-RIT product development project was directed to an apparatus in the form of a handheld unit attachable to an external camera. This apparatus had a housing with the following components contained therein:

- a. a processor,
- b. a display comprising a window in which content can be displayed,

- c. memory,
- d. a removable memory module in addition to the memory,
- e. a user interface,
- f. a wireless communications device comprising a wireless transmitter/receiver,
and
- g. a power supply.

Examples of functionalities provided by this apparatus included:

- a. interfacing with an external camera to capture a visual image,
- b. displaying a visual image framed by the camera on the display,
- c. the processor generating an image data signal representing a visual image framed by the camera (i.e., a digitized framed image),
- d. the memory receiving and storing digitized framed images for allowing the digitized framed images to be accessible for selectively displaying in the display window and accessible for selectively transmitting over a wireless telephone network,
- e. interfacing with an external keyboard for permitting manually input digitized alphanumeric signals to be input to the processor
- f. the user interface enabling a user to select an image data signal (i.e., for a particular one of a plurality of digitized framed images) for viewing and transmission,
- g. an external telephonic system and/or radio system for sending and receiving digitized audio signals and for transmitting image data signals, ,
- h. the power supply providing power for operation of the apparatus,

- i. displaying a visual image on the system whereby the visual image can be viewed and framed prior to capture in the memory,
- j. using the display for viewing alphanumeric images input,
- k. the removable memory being removably housed in the housing for storing captured image data signals,
- l. the display being operable to display for viewing incoming image data signals,
- m. the display providing for framing a visual image to be captured by the camera and for viewing the visual image,
- n. interfacing with the external telephonic system for wirelessly transmitting and receiving non-audio digital signals, including transmitting of digitized image signals, and
- o. the external telephonic system (i.e., including a wireless transmitter/receiver) transmitting digital signals and receiving digital signals.

Based on my direct knowledge of the Military Micro-RIT product development project and my understanding of the '871 Patent, the Military Micro-RIT product development project resulted in the creation of subject matter utilized in the reduction to practice of the invention as recited in at least claims 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 13, and 14 of the '871 patent.

9. The Micro-RIT product development project was directed to an apparatus in the form of a handheld device. This apparatus had a housing with a camera, cellular telephone module, and power supply, mounted externally thereon and the following components contained therein:

- a. a processor,
- b. memory,
- c. a cellular telephonic system for sending and receiving both digitized audio signals and for sending image data signals,
- d. a telephonic system for sending and receiving the digitized audio signals and for sending the image data signal, and
- e. a wireless communications device.

Examples of functionalities provided by this apparatus included:

- a. using the camera to capture a visual image,
- b. the processor generating an image data signal representing a visual image framed by the camera (i.e., a digitized framed image),
- c. the memory receiving and storing digitized framed images,
- d. a telephonic system sending and receiving digitized audio signals and for sending image data signals,
- e. a wireless communications device transmitting any of the digitized signals to the compatible remote station, and
- f. the power supply providing power for operation of the apparatus.

Based on my direct knowledge of the Micro-RIT product development project and my understanding of the '871 Patent, the Micro-RIT product development project resulted in the creation of subject matter utilized in the reduction to practice of the invention as recited in at least claims 1, 2, 3, 4, 5, 6, and 9 of the '871 patent.

10. Attached hereto as exhibit 1 are my time sheets from the time period I spent working on the above-mentioned projects and reducing these projects/devices to practice.

11. These timesheets show that I worked on HCT in January of 1997.
12. These timesheets show that I worked on PICS from March of 1995 to December of 1995.
13. These timesheets show that I worked on Military Micro-RIT from September of 1997 to December of 1997.
14. These timesheets show that I worked on Micro-RIT from September of 1996 to December of 1997.
15. These timesheets accurately reflect to the best of my knowledge the time I spent working on each project.
16. In general, I spent 2 years developing and working on circuits and chips relating to image processing.
17. I was diligent during this entire time period in my attempts to create the hardware and firmware that would be operable in a manner that contributes to the functionality of the invention of David Monroe as recited in claims 1-15 of the '871 patent.
