    A. Summary of Grounds for Challenge .....14

    B. Ground 1: Claims 1-17, 20, and 24-27 are rendered obvious by the combination of Parker Thesis and Warr Thesis and Tan Thesis.....15

    C. Ground 2: Claims 18, 19, and 21-23 are rendered obvious by the combination of Parker Thesis and Warr Thesis and Tan Thesis and Crossland '787.....52

VIII. CONCLUSION.....59

## **I. INTRODUCTION**

Petitioner Finisar Corporation (“Finisar”) requests *inter partes* review of all claims of U.S. Patent No. 7,664,395 (“the ’395 patent”) (Ex. 1001), assigned on its face to Thomas Swan & Co. Ltd. (“Thomas Swan”). The claims of the ’395 patent are generally directed to “optical routing modules” that use a “dispersion device” to disperse light beams of different frequencies in different directions onto a “Spatial Light Modulator (SLM) having a two dimensional array of pixels.” The routing module includes circuitry that displays “holograms” on the SLM in order to route the different frequencies (channels) to particular output ports of the module. The technology claimed in the ’395 patent has applications in fiber optic communications. The original patent application that led to the issuance of the ’395 patent was filed in the United Kingdom on September 3, 2001.

As explained further below, the named inventor on the ’395 patent, Melanie J. Holmes, improperly claimed as her own subject matter that was previously developed and published by her former colleagues at the University of Cambridge (“Cambridge”). For about a decade prior to the filing of the priority application in 2001, students and researchers at Cambridge, working in Professor William Crossland’s Photonics & Sensors group, had investigated and published research relating to the use of liquid crystal SLMs for performing all kinds of optical functions for use in optical communication and other applications. This work is well

documented and described in numerous publications emanating from Dr. Crossland's group in the 1990s. See Ex. 1014, [http://www-g.eng.cam.ac.uk/photronics\\_sensors/people/bill-crossland.htm](http://www-g.eng.cam.ac.uk/photronics_sensors/people/bill-crossland.htm) (biography of Prof. Crossland: "Bill Crossland held the position of Group Leader of the Photonics & Sensors Group . . . from 1992 . . . until his retirement at the end of September 2009. . . He is generally regarded as the founding father of liquid crystal over silicon (LCOS) technologies.") and Ex. 1015, [http://www-g.eng.cam.ac.uk/photronics\\_sensors/publications/index.htm](http://www-g.eng.cam.ac.uk/photronics_sensors/publications/index.htm) (providing an exemplary listing of publications from the Photonics & Sensors group).

In the years prior to the filing of the U.K. priority application, Dr. Holmes collaborated with Cambridge on the development and use of liquid crystal SLMs for optical beam routing and other applications. The collaboration began in at least 1995 (Ex. 1010) (article entitled "Low Crosstalk Devices for Wavelength-Routed Networks," by M. J. Holmes, W. Crossland *et al.*, IEE Colloquium on Guided Wave Optical Signal Processing, IEE Dig. No. 95-128 London, UK) and continued through at least 2001 (Ex. 1011) [article entitled "Holographic Optical Switching: The 'ROSES' Demonstrator," by W. A. Crossland, K.L. Tan, M.J. Holmes *et al.*, *Journal of Lightwave Technology*, Vol. 18, No. 12, Dec. 2000, at 1845-54]. During this time, there were three particular students that worked in Prof. Crossland's group that are relevant to this petition: Michael C. Parker, Stephen T. Warr and Kim L. Tan. Each of these students conducted research relating to liquid crystal SLMs for use in optical

routing that culminated in Ph.D. dissertations published by Cambridge. These three Ph.D. dissertations form the basis of this petition along with a United States patent application filed by Prof. Crossland, each of which are prior art under either § 102(b) or § 102(e).

As explained further below, it is apparent that Dr. Holmes claimed as her own the work of Drs. Parker, Warr and Tan and Prof. Crossland after learning about their research through her collaboration with Cambridge. A review of the publication history of the Cambridge group preceding Dr. Holmes's U.K. priority application makes clear that the researchers in the group worked closely together—sometimes even in the same laboratory using the same devices—and openly shared their ideas with each other. In addition, these researchers frequently cite each other's work in their publications. Thus, by the time of Dr. Holmes filed her U.K. priority application, a person having ordinary skill in the art (“PHOSITA”) would have understood that the inventions claimed in the '395 patent were rendered obvious by the prior work of others at Cambridge. Given the working environment at Cambridge and the long history of cross-cited publications, a PHOSITA would have been strongly motivated to combine the Cambridge publications relied upon in this petition.

This petition shows that there is a reasonable likelihood that Petitioners will prevail on all claims based on the three Cambridge Ph.D. dissertations discussed

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
