Rembrandt Wireless Technologies, LP

Dr. Koopman, for Patent Owner

86. As such, Petitioner's reliance on the Upender/Koopman article is misplaced and misleading. The Upender/Koopman article highlights the tradeoffs of various protocols. The article in no way suggests that one of skill in the art would take a system implementing a CSMA/CA protocol, such as the protocol employed in Boer, and simply recast it as a master/slave communication system for the sake of simplicity and determinacy. Rather, a practitioner of ordinary skill would understand that such a change of protocols would adversely affect some aspects of performance, such as reducing efficiency and flexibility – most likely two of the main reasons a CSMA/CA protocol was chosen by Boer in the first place. These disadvantages would outweigh the potential benefits derived from the simplicity and determinacy of a polling protocol.

Koopman Decl.
(518/Ex. 2208 at ¶86; 519/Ex.
2302 at ¶86).

Dr. Goodman, for Petitioner

10 Q. Did you read the entire Upender
11 article?

12 A. I don't recall reading it from
13 beginning to end. I have looked at various
14 parts of it.

15 Q. Do you have an understanding as to
16 why Upender reaches the conclusion that the
17 CSMA/CA is the most, the best protocol?

18 MR. MILLER: Objection; foundation.

19 A. I don't -- no, I didn't read it
20 carefully enough to find out why. I don't
21 know. I can't say why.

(57) ABSTRACT

A device may be capable of communicating using at least two type types of modulation methods. The device may include a transceiver capable of acting as a master according to a master/slave relationship in which communication from a slave to a master occurs in response to communication from the master to the slave. The master transceiver may send transmissions discrete transmissions structured with a first portion and a payload portion. Information in the first portion may be modulated according to a first modulation method and indicate an impending change to a second modulation method, which is used for transmitting the payload portion. The discrete transmissions may be addressed for an intended destination of the payload portion.

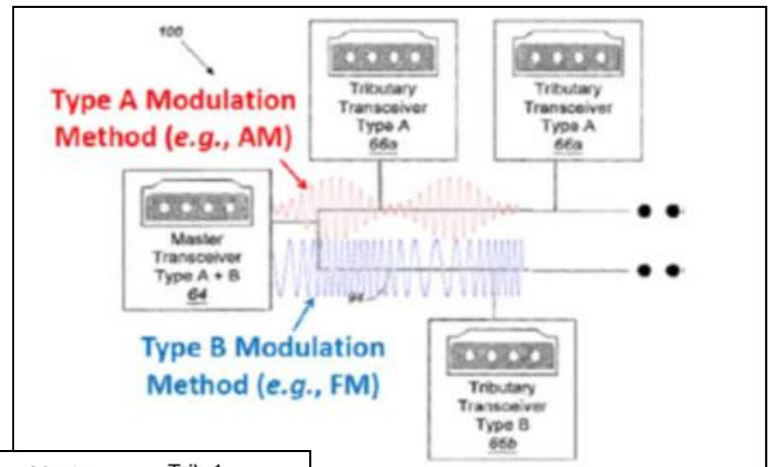

FIG. 4

FIG. 5

- Claim 1

A communication device capable of communicating according to a **master/slave relationship** in which a slave communication from a slave to a master occurs in response to a master communication from the master to the slave, the device comprising:

a transceiver, in the role of the master according to the master/slave relationship, for sending at least transmissions modulated using **at least two types of modulation methods**, wherein the at least two types of modulation methods comprise a first modulation method and a second modulation method, **wherein the second modulation method is of a different type than the first modulation method**, wherein each transmission comprises a group of transmission sequences, wherein each group of transmission sequences is structured with at least a first portion and a payload portion wherein first information in the first portion indicates at least which of the first modulation method and the second modulation method is used for modulating second information in the payload portion, wherein at least one group of transmission sequences is addressed for an intended destination of the payload portion, and wherein for the at least one group of transmission sequences:

the first information for said at least one group of transmission sequences comprises a first sequence, in the first portion and modulated according to the first modulation method, wherein the first sequence indicates an impending change from the first modulation method to the second modulation method, and

the second information for said at least one group of transmission sequences comprises a second sequence that is modulated according to the second modulation method, wherein the second sequence is transmitted after the first sequence.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
