

right to supplement or alter its disclosure herein based on additional information obtained through formal discovery or other means concerning Mercedes' products.

**I. INFRINGED CLAIMS- P.R. 3-1(a)**

AVS asserts that Mercedes infringe directly, contributorily, and/or by inducement one or more of the following claims:

Claims **10, 11, 15-17, 19, 20, and 23** of U.S. Patent No. 5,845,000 (“**the '000 Patent**”).

AVS has identified these claims based on information currently known to it. Other claims of the asserted patents include limitations based on certain discrete components of the claimed apparatus or certain discrete steps of the claimed method that AVS has been unable to definitively determine based on information currently known to AVS. AVS, however, believes that discovery and further investigation may likely identify such additional claims that are infringed by the Accused Instrumentalities or use thereof, and AVS accordingly reserves the right to supplement its identification of claims and other disclosures in the course of discovery or further investigation.

**II. IDENTIFICATION OF ACCUSED INSTRUMENTALITIES AND CLAIM CHARTS- P.R 3-1(b)-(c)**

Based on present information and belief, AVS contends that the Asserted Claims are infringed by Mercedes motor vehicles of various versions and model years (“Mercedes Vehicles”), having the functionality described in the provided claim charts that have been made, used, sold, offered for sale, or imported by Mercedes and/or that have otherwise been used as intended by Mercedes (“Accused Instrumentalities”).

Attached as Exhibit A, and incorporated herein in their entirety, is a chart identifying where each element of the Asserted Claims is met by various features or functionalities

possessed by a representative Mercedes Vehicle or implicated by the use of Mercedes Vehicles (Accused Instrumentalities). In certain instances, the claim charts identify the features and functionality by a Feature or Option name that AVS has determined Mercedes uses for the described features and functionalities. Other Features or Options with different names may be used within or by Mercedes to describe the same or similar features and functionalities. Similarly, in certain instances, the claim charts identify certain models of Mercedes Vehicles that AVS has determined possess the described features and functionalities. AVS has not, however, determined every model and model version that possesses the described features and functionalities, nor has AVS determined for each model and model version the model years in which the model and model versions possessed the described features and functionalities. The descriptions of the features and functionalities in the provided claim charts provide Mercedes with sufficient information to identify the Features and Options implicated by AVS's contentions as well as the Models and Model Versions and their associated Model Years implicated by AVS's contentions.

AVS contends that any other Accused Instrumentality functions and/or operates in substantially the same manner as shown in the representative chart, thereby infringing the Asserted Claims. Unless otherwise indicated, the information provided that corresponds to each claim element is considered to indicate that each claim element is found within each of the above-described models and/or versions of Mercedes' Accused Instrumentalities.

As described further in the provided claim chart, Exhibit A, AVS accuses various Mercedes Vehicles (various model years and trim levels) equipped with technology referred to by Mercedes as Adaptive Highbeam Assist, Intelligent Light, and/or Night View Assist technology including but not limited to the A-Class, B-Class, C-Class, CL-Class, CLS-Class, E-

Class, GL-Class, GLK-Class, GLS-Class, M-Class, S-Class, SL-Class Mercedes Vehicles of infringing at least claims 10, 11, 15-17, 19, 20, and 23 of the '000 Patent.

### **III. IDENTIFICATION OF TYPE OF INFRINGEMENT ASSERTED- P.R 3-1(d)**

At this time, AVS knows of no specific limitations of the asserted claims where infringement depends on the doctrine of equivalents. AVS expressly reserves the right to modify, augment, and/or supplement its assertion of infringement under the doctrine of equivalents of any elements of any of the asserted claims after discovery from Mercedes and/or third parties and/or after this Court has set forth its construction of the asserted claims.

### **IV. PRIORITY DATES OF ASSERTED CLAIMS -P.R. 3-1(e)**

U.S. Patent Application No. 08/474,786 filed on June 7, 1995 resulted in the '000 Patent. The 08/474,786 application claims priority to U.S. Patent Application No. 08/247,760 filed on May 23, 1994. Claims 10, 11, 15, 19, and 23 of the '000 Patent have an effective filing date of May 23, 1994. Claims 16, 17, and 20 of the '000 Patent have an effective filing date of June 7, 1995.

### **V. PLAINTIFF'S PRODUCTS- P.R. 3-1(f)**

AVS is not presently relying on any assertion that its own apparatus, product, device, process, method, act, or other instrumentality practices the claimed inventions.

### **VI. DOCUMENT PRODUCTION ACCOMPANYING DISCLOSURE**

Pursuant to Patent Rule 3-2, AVS hereby provides its Document Production Accompanying Disclosure along with an identification of the categories to which each of the documents corresponds.

#### **A. Documents Responsive to P.R. 3-2(a)**

AVS is presently unaware of any relevant, non-privileged documents responsive to P.R. 3-2(a). AVS will supplement this response should any relevant, non-privileged documents be identified in the future.

**B. Documents Responsive to P.R. 3-2(b)**

AVS is presently unaware of any relevant, non-privileged documents responsive to P.R. 3-2(b). AVS will supplement this response should any relevant, non-privileged documents be identified in the future.

**C. Documents Responsive to P.R. 3-2(c)**

Pursuant to P.R. 3-2(c), copies of the file histories of the five AVS patents asserted in Action Nos. 6:13cv307-MHS, 6:13cv308-MHS, 6:13cv309-MHS, and 6:13cv310-MHS, as well as the file histories for patents to which they are related and/or claim priority, are being concurrently produced in all actions under Bates Numbers AVSFH00000001 - AVSFH00058395.

**VII. CONCLUSION**

The information contained in these disclosures is based on AVS's analysis of the facts currently known to it based on AVS's review of publicly information reasonably available to it. Pertinent information about Mercedes' Accused Instrumentalities is not available without engaging in further discovery. Thus, AVS reserves the right to supplement, modify, and/or amend these disclosures as new information becomes available and discovery progresses. AVS anticipates that additional facts and relevant documents will be uncovered that will warrant supplementing and/or amending these disclosures.

# EXHIBIT A

## **EXHIBIT A**

### **Infringement Claim Chart for U.S. Patent No. 5,845,000**

The Features/Options primarily relied upon in this chart is referred to by Mercedes as Adaptive Highbeam Assist, Intelligent Light, and/or Night View Assist technology. On present information and belief, AVS understands the technology referred to by Mercedes as Adaptive Highbeam Assist, Intelligent Light, and/or Night View Assist technology are/have been offered either as a stand-alone feature/option on Mercedes-branded vehicles or as part of other packages. Further, on information and belief, AVS understands that this technology as provided on various Mercedes-branded vehicles operates identically or substantially in the same manner for all such Mercedes-branded vehicles, at least with respect to the elements of the asserted claims. Accordingly, this chart may rely on information obtained with respect to the use of these systems in specific Mercedes-branded vehicles.

To the extent discovery later shows that operation of this technology differs between different Mercedes-branded vehicle models or model years, at least with respect to the elements of the asserted claims, AVS reserves the right to amend or further supplement these contentions with additional information learned in the course of discovery or further investigation. Moreover, based on AVS's current information, the full extent to which these systems interact with or work in conjunction with or in parallel to other Mercedes systems, is not known. Such "interactions," if determined to exist in discovery or further investigation, could provide alternative bases for infringement of the identified claims or bases for

infringement of additional claims. For all these reasons, AVS reserves the right to amend or further supplement these contentions with additional information learned in the course of discovery or further investigation.

Based on the information presently available to it, AVS contends that Mercedes directly infringes United States Patent No. 5,845,000 (“the ’000 Patent”) by making, using, selling or offering to sell within the United States, or importing into the United States, Mercedes-branded vehicles that include A-Class, B-Class, C-Class, CL-Class, CLS-Class, E-Class, GL-Class, GLK-Class, GLS-Class, M-Class, S-Class, SL-Class vehicles that include Adaptive Highbeam Assist, Intelligent Light, and/or Night View Assist technology (“Accused Instrumentalities”). AVS also contends that Mercedes indirectly infringes the ’000 Patent by actively inducing and contributing to its customers’ direct infringement of the asserted claims.

’000 Claim 10	Elements in Accused Instrumentality
<p><b>10. [pre]</b> In a motor vehicle having an interior and an exterior, a monitoring system for monitoring at least one object exterior to said vehicle comprising:</p>	<p>Based on present information and belief, AVS contends that the Accused Instrumentalities include a motor vehicle having an interior and an exterior, and a monitoring system for monitoring at least one object exterior to said vehicle.</p> <p>See <a href="http://techcenter.mercedes-benz.com/en/adaptive_high_beam_assist/detail.html">http://techcenter.mercedes-benz.com/en/adaptive_high_beam_assist/detail.html</a>            See <a href="http://techcenter.mercedes-benz.com/en/night_view_plus_with_spotlight/detail.html">http://techcenter.mercedes-benz.com/en/night_view_plus_with_spotlight/detail.html</a>            See <a href="http://techcenter.mercedes-benz.com/en/ils/detail.html">http://techcenter.mercedes-benz.com/en/ils/detail.html</a></p> <p><b>ADAPTIVE HIGHBEAM ASSIST:</b></p> <div data-bbox="583 980 1692 1310" style="border: 1px solid black; padding: 10px;"> <p><b>Adaptive Highbeam Assist</b></p> <p>Engineered to provide the maximum possible road illumination without creating glare for other drivers, this innovative feature uses continuous input from a camera to automatically vary the range of your high beams, based on the distance both to oncoming vehicles and to those ahead of you. Enhancing your ability to identify changes in the road’s path and the presence of pedestrians and hazards earlier, Adaptive Highbeam Assist can help you drive more safely and confidently in the dark.</p>  </div>

'000 Claim 10

Elements in Accused Instrumentality

<http://www.mbusa.com/mercedes/legacy/vehicles/model?class=S&model=S600V#design>

[http://www.emercedesbenz.com/Nov08/12\\_001503\\_Mercedes\\_Benz\\_TecDay\\_Special\\_Feature\\_Safety\\_Systems\\_In\\_The\\_New\\_E\\_Class\\_And\\_S\\_Class\\_From\\_Spring\\_2009.html](http://www.emercedesbenz.com/Nov08/12_001503_Mercedes_Benz_TecDay_Special_Feature_Safety_Systems_In_The_New_E_Class_And_S_Class_From_Spring_2009.html)

'000 Claim 10	Elements in Accused Instrumentality
	<p data-bbox="604 256 1533 284"><b>Adaptive Highbeam Assist: the best possible light in any traffic situation</b></p> <p data-bbox="604 332 1533 584">Tests show that motorists who use Adaptive Highbeam Assist are safer on the road in the dark because they see pedestrians, cyclists or obstacles on the road up to 150 metres earlier than is the case with conventional low beam. What's more, the system helps to <b>relieve driver stress</b> as there is no longer any need to repeatedly flick the stalk on the steering wheel. So the driver can concentrate more on actually driving the car. Once activated, Adaptive Highbeam Assist always provides the best possible headlamp range.</p> <p data-bbox="604 633 1533 738">At the heart of the system is a camera, located on the inside of the windscreen, which sends new data every 40 milliseconds so that the range of the variable-control bi-xenon headlamps can be adjusted.</p> <p data-bbox="604 787 1533 958">Mercedes-Benz has further developed its <b>Night View Assist</b> system, which illuminates a long stretch of the road ahead using invisible infrared light. The second generation of this system features a special pedestrian detection function: as soon as the system detects pedestrians ahead of the car, they are highlighted on the display.</p> <p data-bbox="604 982 1887 1039"><a href="http://www.mercedesbenz.com/Nov08/12_001503_Mercedes_Benz_TecDay_Special_Feature_Safety_Systems_In_The_New_E_Class_And_S_Class_From_Spring_2009.html">http://www.mercedesbenz.com/Nov08/12_001503_Mercedes_Benz_TecDay_Special_Feature_Safety_Systems_In_The_New_E_Class_And_S_Class_From_Spring_2009.html</a></p> <p data-bbox="499 1079 798 1104"><b>NIGHT VIEW ASSIST:</b></p>

'000 Claim 10	Elements in Accused Instrumentality
	<div data-bbox="611 266 1035 506" data-label="Image"> </div> <p data-bbox="1016 302 1661 435">This system employs infrared technology to present the night-time road scene on the display, indicating identified persons; optionally, a spotlight can flash up pedestrians at the side of the road.</p> <p data-bbox="1016 480 1661 792">When the sun has set, driving becomes more dangerous. Night-time accounts for only 20 percent of the total traffic volume – but 40 percent of all fatal accidents! Headlamps offering low and high beam are limited in their ability to counter this problem. Mercedes-Benz thus explores other ways of improving visibility. NIGHT VIEW ASSIST PLUS employs an infrared camera to reveal obstacles that otherwise remain concealed at night. This improves safety for drivers, as well as careless pedestrians.</p> <p data-bbox="585 816 1535 841"><a href="http://techcenter.mercedes-benz.com/en/night_view_plus_with_spotlight/detail.html">http://techcenter.mercedes-benz.com/en/night_view_plus_with_spotlight/detail.html</a></p>
<p data-bbox="205 914 478 1062"><b>[a]</b> transmitter means for transmitting electromagnetic waves to illuminate the at least one exterior object; and</p>	<p data-bbox="501 914 1860 979">Based on present information and belief, AVS contends that the Accused Instrumentalities comprise a transmitter means for transmitting electromagnetic waves to illuminate the at least one exterior object:</p> <p data-bbox="501 1011 932 1036"><b>ADAPTIVE HIGHBEAM ASSIST:</b></p>

'000 Claim 10	Elements in Accused Instrumentality
	<p data-bbox="615 256 1680 508">The new E-Class will be the world's first car to feature headlamps that adapt automatically in line with the current driving situation. <b>Adaptive Highbeam Assist</b> detects oncoming vehicles or moving vehicles in front with their lights on and adjusts the headlamps continuously so as to always provide the best possible headlamp range – without dazzling other motorists. In this way, the low-beam range can be increased from its current level of 65 metres to up to 300 metres.</p> <p data-bbox="615 565 1669 727">If the road ahead is clear, the system switches to high beam with a minimum of fuss. This Mercedes development is therefore fundamentally different to conventional systems of this type, since the latter merely switch between low beam and high beam.</p> <p data-bbox="583 784 1879 849"><a href="http://www.mercedesbenz.com/Nov08/12_001503_Mercedes_Benz_TecDay_Special_Feature_Safety_Systems_In_The_New_E_Class_And_S_Class_From_Spring_2009.html">http://www.mercedesbenz.com/Nov08/12_001503_Mercedes_Benz_TecDay_Special_Feature_Safety_Systems_In_The_New_E_Class_And_S_Class_From_Spring_2009.html</a></p>

'000 Claim 10	Elements in Accused Instrumentality
	<p data-bbox="594 256 1241 315"><b>Permanent high beam with no dazzle: Adaptive Highbeam Assist Plus</b></p> <p data-bbox="594 363 1276 711">For the first time, Adaptive Highbeam Assist Plus allows the high-beam headlamps to be kept on permanently while driving by masking out any other road user detected in the beams' cone of light. If the camera-based system registers either oncoming traffic or vehicles ahead, it will adapt the light distribution according to the specific situation when the high beam is switched on. Consequently, the driver can simply leave the high-beam headlamps on at all times and use their full range without irritating or even endangering other road users. There is no need to switch them on and off manually, resulting in a significant increase in the overall driving time with high beam.</p> <p data-bbox="594 760 1268 1036">Adaptive Highbeam Assist Plus likewise makes use of the new stereo camera also employed by other assistance systems. If its image recognition algorithm picks up a vehicle that is oncoming or driving ahead, it actuates a mechanism in the headlamp module. This then masks the portion of the LED headlamp's main-beam cone of light where there are other vehicles to prevent their drivers being dazzled. If road users are detected outside the area that can be masked – for instance when cornering with multiple vehicles in the headlamps' beams – the</p> <p data-bbox="583 1045 1833 1104"><a href="http://media.daimler.com/dcmmedia/0-921-1549267-1-1608240-1-0-0-1609495-0-1-12759-614216-0-0-0-0-0-0.html?TS=1374410323331">http://media.daimler.com/dcmmedia/0-921-1549267-1-1608240-1-0-0-1609495-0-1-12759-614216-0-0-0-0-0-0.html?TS=1374410323331</a></p>

▲ **Adaptive Highbeam Assist Plus**  
Dazzle-free permanent high beam

▲ When the camera-based Adaptive Highbeam Assist Plus system detects oncoming traffic or vehicles ahead, it adapts the high-beam light distribution according to the prevailing traffic situation. A mechanism in the headlamp module masks out the area in the light cone of the LED headlamps in which other vehicles are located, so as to avoid dazzling the drivers of these vehicles. This means that the driver can leave high beam on permanently

and use its range without irritating or endangering other road users in the process. Potential dazzling of the driver himself due to increased use of high beam and highly reflective signs at the edge of the road is detected by the system and duly prevented by specifically dimming the headlamps. The system is active at speeds of 30 km/h and over in the dark on roads without lighting.

A positive side effect of this is that the pedestrian is also alerted to the presence of the approaching vehicle. The new spotlight function will be included as a standard feature of the Active Night View Assist Plus in a luxury class Mercedes model from the summer of 2011.</b> </p> <p data-bbox="583 1060 1575 1084"> <a href="http://media.daimler.com/Projects/c2c/channel/documents/1958718_PI_Spotlight_e.pdf">http://media.daimler.com/Projects/c2c/channel/documents/1958718_PI_Spotlight_e.pdf</a> </p>

'000 Claim 10	Elements in Accused Instrumentality
	<p data-bbox="590 248 1787 509">The Night View Assist Plus with new spotlight function is a complex combination of a variety of technical functions. Infrared headlamps, night vision camera, multipurpose camera, spotlight headlamps, instrument cluster display and headlamp switch are all coordinated by several control units using complex software.</p> <p data-bbox="583 545 1577 573"><a href="http://media.daimler.com/Projects/c2c/channel/documents/1958718_PI_Spotlight_e.pdf">http://media.daimler.com/Projects/c2c/channel/documents/1958718_PI_Spotlight_e.pdf</a></p> <p data-bbox="590 605 1787 756">The spotlight function uses <b>infrared technology</b> to detect pedestrians at a range of up to 80 metres: two separate light sources in the headlamps illuminate the road with invisible, non-dazzling infrared light. A <b>windscreen-mounted camera</b></p> <p data-bbox="583 792 1577 820"><a href="http://media.daimler.com/Projects/c2c/channel/documents/1958718_PI_Spotlight_e.pdf">http://media.daimler.com/Projects/c2c/channel/documents/1958718_PI_Spotlight_e.pdf</a></p> <p data-bbox="583 852 1881 992">“The range of the two infrared headlamps to the right and left of the radiator grille corresponds to that of standard bi-xenon light in high-beam mode – with the advantage that oncoming traffic is not dazzled because infrared is not visible to humans. The illuminated road scenario is filmed by an infrared camera located inside the vehicle at the top edge of the windscreen.”</p> <p data-bbox="583 1024 1297 1052"><a href="http://techcenter.mercedes-benz.com/en/night_view/detail.html">http://techcenter.mercedes-benz.com/en/night_view/detail.html</a></p>

### Night View Assist Plus camera

1 Night View Assist Plus camera

#### Night View Assist Plus

In addition to the illumination provided by the normal headlamps, Night View Assist Plus uses infrared light to illuminate the road. Night View Assist Plus camera 1 picks up the infrared light and displays a greyscale image in the COMAND display. This enables you to see the road's course and any obstacles in good time. If pedestrian recognition is activated, pedestrians recognised by the system are highlighted in the Night View Assist Plus display.

<http://www4.mercedes-benz.com/manual-cars/ba/cars/w166/en/overview/fahrssysteme4.html>

'000 Claim 10	Elements in Accused Instrumentality
	<p data-bbox="590 256 1766 581">The infrared-sensitive camera behind the front windscreen films the traffic situation ahead and relays the corresponding images to the dashboard display. The scenario is illuminated by infrared light, which is invisible to the human eye. Two infrared headlamps to the right and left of the radiator grille serve as the light sources. The range of the two infrared headlamps is practically equivalent to that of standard bi-xenon light in high-beam mode – but with the advantage that oncoming traffic is not dazzled.</p> <p data-bbox="583 618 1766 646"><a href="http://www.daimler.com/dcom/0-5-1210218-1-1210320-1-0-0-1210228-0-1-8-7165-0-0-0-0-0-0.html">http://www.daimler.com/dcom/0-5-1210218-1-1210320-1-0-0-1210228-0-1-8-7165-0-0-0-0-0-0.html</a></p>

**▲ Targetted spotlighting of pedestrians in the road.**  
 With the new Spotlight function for Active Night View Assist PLUS, Mercedes-Benz is presenting an active lighting system as a world first that leads to a completely new level of safety at night.  
  
 When the camera detects pedestrians in its field of vision, these can be briefly spotlighted to alert the driver to the potential danger. The pedestrians also receive a warning in this way. The new Spotlight function will enter series production as part of Active Night View Assist PLUS in a luxury-class Mercedes model in summer 2011.

- ▲ Infrared headlamps** Two separate lamps in the headlamps illuminate the road surface with invisible infrared light.
- ▲ Infrared camera** Monitors the road ahead of the car, evaluates the image and detects pedestrians within a range of up to 80 metres. The image is transferred to a display in the instrument cluster.
- ▲ Multi-purpose camera** Recognises whether the car is travelling in town or in the country, and registers the position of an oncoming vehicle or one travelling ahead.
- ▲ Control units** decide whether a detected pedestrian is to be spotlighted or not.
- ▲ Main headlamp** flashes a targetted spotlight at the pedestrian if necessary.

Night View Assist Plus camera

1 Night View Assist Plus camera

**Night View Assist Plus**

In addition to the illumination provided by the normal headlamps, Night View Assist Plus uses infrared light to illuminate the road. Night View Assist Plus camera 1 picks up the infrared light and displays a greyscale image in the COMAND display. This enables you to see the road's course and any obstacles in good time. If pedestrian recognition is activated, pedestrians recognised by the system are highlighted in the Night View Assist Plus display.

▲ **Adaptive Highbeam Assist Plus**  
Dazzle-free permanent high beam

▲ When the camera-based Adaptive Highbeam Assist Plus system detects oncoming traffic or vehicles ahead, it adapts the high-beam light distribution according to the prevailing traffic situation. A mechanism in the headlamp module masks out the area in the light cone of the LED headlamps in which other vehicles are located, so as to avoid dazzling the drivers of these vehicles. This means that the driver can leave high beam on permanently

and use its range without irritating or endangering other road users in the process. Potential dazzling of the driver himself due to increased use of high beam and highly reflective signs at the edge of the road is detected by the system and duly prevented by specifically dimming the headlamps. The system is active at speeds of 30 km/h and over in the dark on roads without lighting.

<http://www.youtube.com/watch?v=861qN1Q-dBs&feature=related>

**NIGHT VIEW ASSIST:**

**Targetted spotlighting of pedestrians in the road.**

With the new Spotlight function for Active Night View Assist PLUS, Mercedes-Benz is presenting an active lighting system as a world first that leads to a completely new level of safety at night.

When the camera detects pedestrians in its field of vision, these can be briefly spotlighted to alert the driver to the potential danger. The pedestrians also receive a warning in this way. The new Spotlight function will enter series production as part of Active Night View Assist PLUS in a luxury-class Mercedes model in summer 2011.

- ▲ **Infrared headlamps** Two separate lamps in the headlamps illuminate the road surface with invisible infrared light.
- ▲ **Infrared camera** Monitors the road ahead of the car, evaluates the image and detects pedestrians within a range of up to 80 metres. The image is transferred to a display in the instrument cluster.
- ▲ **Multi-purpose camera** Recognises whether the car is travelling in town or in the country, and registers the position of an oncoming vehicle or one travelling ahead.
- ▲ **Control units** decide whether a detected pedestrian is to be spotlighted or not.
- ▲ **Main headlamp** flashes a targetted spotlight at the pedestrian if necessary.

15. The system in accordance with claim	Based on present information and belief, AVS contends that for the Accused Instrumentalities the processor means may comprise a neural network algorithm.

'000 Claim 15	Elements in Accused Instrumentality
<p>10 wherein said processor means comprises a neural network algorithm.</p>	<p><b>Data fusion: amalgamation for reliable operation.</b>  Highly sophisticated sensors and the necessary networked algorithms provide the foundation for innovative new functions. Data fusion enables the algorithms for the varying systems to amalgamate the visual information from the → stereo camera with the readings from the → radar sensors. Many of the assistance systems from Mercedes-Benz work in this way, fusing multiple or complementary data sources to ensure reliable operation.</p> <p><a href="http://media.daimler.com/dcmmedia/0-921-1549267-1-1549422-1-0-0-1549717-0-1-12759-614216-0-0-0-0-0-0.html?TS=1374448903640">http://media.daimler.com/dcmmedia/0-921-1549267-1-1549422-1-0-0-1549717-0-1-12759-614216-0-0-0-0-0-0.html?TS=1374448903640</a>  <a href="http://media.daimler.com/dcmmedia/0-921-1549267-1-1549536-1-0-0-1549717-0-1-12759-614216-0-0-0-0-0-0.html?TS=1374449213069">http://media.daimler.com/dcmmedia/0-921-1549267-1-1549536-1-0-0-1549717-0-1-12759-614216-0-0-0-0-0-0.html?TS=1374449213069</a></p>

'000 Claim 15	Elements in Accused Instrumentality
	<p data-bbox="590 264 1446 469">Highly sophisticated sensors and the necessary networked algorithms provide the foundation for innovative new functions. DISTRONIC PLUS with Steering Assist, BAS PLUS and PRE-SAFE® Brake all employ sensor fusion using the same stereo camera and multistage radar sensors.</p> <p data-bbox="590 529 1446 1000">Mercedes-Benz is making a major leap forward with the introduction of the Stereo Multi-Purpose Camera (SMPC), or stereo camera for short. Just like the Multi-Purpose Camera (MPC) fitted previously, it is positioned behind the windscreen in the vicinity of the rear-view mirror. It has an opening angle of 45° and is capable of three dimensional detection of crossing objects and pedestrians, and calculating their path. The camera's two "eyes" provide it with a three-dimensional view of the area up to around 50 metres in front of the vehicle, and it is able to monitor the overall situation ahead for a range of up to 500 metres. In this way, the new camera is able to provide data for processing by various systems.</p> <p data-bbox="590 1060 1446 1219">Intelligent algorithms evaluate this information in order to detect and carry out spatial classification of both vehicles that are driving ahead, oncoming or crossing, as well as pedestrians and a variety of traffic signs within a large field of vision.</p> <p data-bbox="590 1243 1835 1300"><a href="http://media.daimler.com/dcmedia/0-921-1549267-1-1549422-1-0-0-1549717-0-1-12759-614216-0-0-0-0-0-0-0.html?TS=1374448903640">http://media.daimler.com/dcmedia/0-921-1549267-1-1549422-1-0-0-1549717-0-1-12759-614216-0-0-0-0-0-0-0.html?TS=1374448903640</a> (Mercedes Benz "Intelligent Drive" TecDay Download – full document)</p>

'000 Claim 15	Elements in Accused Instrumentality
	<div data-bbox="583 302 1365 893" style="border: 1px solid black; padding: 10px;"> <p>The Adaptive Highbeam Assist from Mercedes-Benz is based on a camera on the inside of the front windscreen which monitors the traffic situation in front of the car. An intelligent image processing algorithm enables the camera to identify other vehicles and to calculate their distances. The range of the variably adjustable bi-xenon headlamps is set accordingly and adjusted continuously according to the distance of the vehicle ahead or oncoming traffic.</p> </div> <p data-bbox="583 927 1766 959"><a href="http://www.daimler.com/dccom/0-5-1210218-1-1210317-1-0-0-1210228-0-1-8-7165-0-0-0-0-0-0.html">http://www.daimler.com/dccom/0-5-1210218-1-1210317-1-0-0-1210228-0-1-8-7165-0-0-0-0-0-0.html</a></p> <p data-bbox="499 1027 800 1055"><i>See also claim 10 (above).</i></p>

<b>'000 Claim 17</b>	<b>Elements in Accused Instrumentality</b>
	<i>See evidence for 10[d]</i> (above).

<b>'000 Claim 19</b>	<b>Elements in Accused Instrumentality</b>
<b>19.</b> The system of claim 10, wherein said reception means comprise a CCD array.	Based on present information and belief, AVS contends that for the Accused Instrumentalities the reception means may comprise CCD array.  <b>ADAPTIVE HIGHBEAM ASSIST:</b>

'000 Claim 19	Elements in Accused Instrumentality
	<p data-bbox="594 256 1241 315"><b>Permanent high beam with no dazzle: Adaptive Highbeam Assist Plus</b></p> <p data-bbox="594 367 1283 711">For the first time, Adaptive Highbeam Assist Plus allows the high-beam headlamps to be kept on permanently while driving by masking out any other road user detected in the beams' cone of light. If the camera-based system registers either oncoming traffic or vehicles ahead, it will adapt the light distribution according to the specific situation when the high beam is switched on. Consequently, the driver can simply leave the high-beam headlamps on at all times and use their full range without irritating or even endangering other road users. There is no need to switch them on and off manually, resulting in a significant increase in the overall driving time with high beam.</p> <p data-bbox="594 760 1272 1036">Adaptive Highbeam Assist Plus likewise makes use of the new stereo camera also employed by other assistance systems. If its image recognition algorithm picks up a vehicle that is oncoming or driving ahead, it actuates a mechanism in the headlamp module. This then masks the portion of the LED headlamp's main-beam cone of light where there are other vehicles to prevent their drivers being dazzled. If road users are detected outside the area that can be masked – for instance when cornering with multiple vehicles in the headlamps' beams – the</p> <p data-bbox="583 1081 1835 1140"><a href="http://media.daimler.com/dcmmedia/0-921-1549267-1-1608240-1-0-0-1609495-0-1-12759-614216-0-0-0-0-0-0.html?TS=1374410323331">http://media.daimler.com/dcmmedia/0-921-1549267-1-1608240-1-0-0-1609495-0-1-12759-614216-0-0-0-0-0-0.html?TS=1374410323331</a></p> <p data-bbox="499 1208 795 1235"><b>NIGHT VIEW ASSIST:</b></p>

'000 Claim 19	Elements in Accused Instrumentality
	<p><b>Targetted spotlighting of pedestrians in the road.</b>            With the new Spotlight function for Active Night View Assist PLUS, Mercedes-Benz is presenting an active lighting system as a world first that leads to a completely new level of safety at night.</p> <p>When the camera detects pedestrians in its field of vision, these can be briefly spotlighted to alert the driver to the potential danger. The pedestrians also receive a warning in this way. The new Spotlight function will enter series production as part of Active Night View Assist PLUS in a luxury-class Mercedes model in summer 2011.</p> <ul style="list-style-type: none"> <li>▲ <b>Infrared headlamps</b> Two separate lamps in the headlamps illuminate the road surface with invisible infrared light.</li> <li>▲ <b>Infrared camera</b> Monitors the road ahead of the car, evaluates the image and detects pedestrians within a range of up to 80 metres. The image is transferred to a display in the instrument cluster.</li> <li>▲ <b>Multi-purpose camera</b> Recognises whether the car is travelling in town or in the country, and registers the position of an oncoming vehicle or one travelling ahead.</li> <li>▲ <b>Control units</b> decide whether a detected pedestrian is to be spotlighted or not.</li> <li>▲ <b>Main headlamp</b> flashes a targetted spotlight at the pedestrian if necessary.</li> </ul> <p><a href="http://media.daimler.com/dcmedia/0-921-658892-1-1354042-1-0-1-0-0-1-12639-1549054-0-3842-0-0-0-0.html?TS=1374407762338">http://media.daimler.com/dcmedia/0-921-658892-1-1354042-1-0-1-0-0-1-12639-1549054-0-3842-0-0-0-0.html?TS=1374407762338</a></p>
