Title 49—TRANSPORTATION

Chapter V-National Highway Traffic Safety Administration, Department of Transportation

PART 571-FEDERAL MOTOR VEHI-**CLE SAFETY STANDARDS**

Recodification

The Motor Vehicle Safety Standards formerly contained in § 571.21 of Title 49 are being recodified and reissued as Subpart B of Part 571 (§§ 571.101 through 571.302). The recodification is for convenience and ease in incorporating future amendments, particularly those amendments with future effective dates.

These sections are keyed to the num-

bers of the existing standards. Regulations for concurrent standards bearing the same standard number and becoming effective at a future date involving a time period of a year or more, are identified with the suffix "a", "b", etc. The suffix will be dropped from the new standard when the effective date is reached. This in effect denotes a supersedure of the former standard. Amendments published in the Federal Register to these standards are reflected in the recodification and have been incorporated in these regulations through November 11, 1971.

DOUGLAS W. TOMS, Administrator.

Subpart B---Federal Motor Vehicle Safety

oppo	Standards
Sec.	4.1
571.101	Standard No. 101; Control location
042.101	and identification.
571.101a	Standard No. 101a: Control loca-
011.1016	tion, identification, and illumi-
	nation. (Effective Jan. 1, 1972.
	with amendments effective Sept.
	1, 1972, and Mar. 1, 1973)
571.102	Standard No. 102; Transmission
	shift lever sequence, starter in-
	terlock, and transmission brak-
	ing effect.
571.103	Standard No. 103; Windshield de-
	frosting and defogging systems.
571.10 4	Standard No. 104; Windshield wip-
	ing and washing systems.
571.105	Standard No. 105; Hydraulic serv- ice brake, emergency brake and
	parking brake systems.
571.106	Standard No. 166: Hydraulic brake

connections. Standard No. 302: Flammability 571.302 of interior materials. (Effective Sept. 1, 1972)

AUTHORITY: The provisions of this Subpar B issued under a cs. 103, 119, 80 Stat. 719, 728; 15 U.S.C. 1392, 1407.

Subpart B—Federal Motor Vehicle Safety Standards

§ 571.101 Standard No. 101; Control location and identification.

S1. Purpose and scope. This standard specifies the requirements for location and identification of certain con-trols to facilitate their selection and ensure their accessibility.

S2. Application. This standard applies to passenger cars.

83. Requirements. 83.1 Location. Control of the following shall be provided within operational reach of a person seated at the controls, restrained by a Type 2 seat belt system with a reasonable degree of slack in the upper torso portion of the belt

(a) Steering;

assembly:

(b) Horn;

(c) Transmission, except transfer case:

(d) Ignition:

Headlamps: (e)

Turn signal; **(f)**

Windshield wiping system;

Windshield washing system;

(i) Choke (if manual); and,

(j) Driver's sun visor.

S3.2 Identification. The following controls, when mounted on the instrument panel, shall be identified to permit recognition, by words or symbols, under daylight lighting conditions:

(a) Headlamps;(b) Windshield wiping system;(c) Windshield washing system;

(d) Windshield defrosting and defogging system; and,

(e) Choke (if manual).

§ 571.101a Standard No. 101a; Control location, identification, and illumination. (Effective Jan. 1, 1972, with amendments effective Sept. 1, 1972, and Mar. 1, 1973)

S1. Scope. This standard specifies requirements for the location, identification, and illumination of motor vehicle controls.

S2. Purpose. The purpose of this standard is to insure the accessibility of motor vehicle controls and to facilitate their selection under daylight and nighttime conditions, in order to reduce the hazards caused by the diversion of the driver's attention from the motoring environment.

S3. Application. This standard applies to passenger cars, multipurpose passenger vehicles, trucks, and buses.

S4. Requirements. Each passenger car, multipurpose passenger vehicle, truck, and bus manufactured with any control listed in S4.1 or Column 1 of Table 1, shall meet the requirements of this standard for the location, identification, and illumination of such control.

S4.1 Control location. This section applies to each passenger car manufactured on or after January 1, 1972, and to each multipurpose passenger vehicle, truck, and bus manufactured on or after September 1, 1972. Each of the following controls shall be operable, under the conditions of S5, by a person seated at the controls:

(a) Steering wheel.

(b) Horn control.

(c) Transmission shift lever, except transfer case.

(d) Ignition switch (e) Headlamp switch.

(f) Turn signal control Illumination intensity control.

Windshield wiper control. Windshield washer control.

Manual choke.

(k) Driver's sun visor.

84.2 Control identification. This section applies to each passenger car manufactured on or after January 1, 1972, and to each multipurpose passenger vehicle. truck, and bus manufactured on or after September 1, 1972, If any control listed in Column 1 of Table 1 is manually operated, the control shall be identified by the word or abbreviation specified in Column 2, Each position of an automatic vehicle speed control and a heating and air conditioning system control, other than an intermediate position of a rocker-type or push-pull type control, shall be identified. A control may, in addition, be identified by a symbol, but

FEDERAL REGISTER, VOL. 36, NO. 232-THURSDAY, DECEMBER 2, 1971

RULES AND REGULATIONS

- § 571.117 Standard No. 117; Retreaded pneumatic tires.
- S1. Scope. This standard specifies performance, labeling, and certification requirements for retreaded pneumatic

passenger car tires.

S2. Purpose. The purpose of this standard is to require retreaded pneumatic passenger car tires to meet safety criteria similar to those for new pneumatic

passenger car tires.

S3. Application, 'This standard applies to retreaded pneumatic tires for use on passenger cars manufactured after 1948.

S4. Definitions. S4.1 "Casing" means a used tire to which additional tread may be attached for the purpose of retreading.

"Retreaded" means manufactured by a process in which a tread is attached

to a casing. S4.2 All terms defined in §§ 571.109 and 571.110 are used as defined therein. S5. Requirements.

S5.1 Retreaded tires.

- S5.1.1 Except as specified in S5.1.3, each retreaded tire, when mounted on a test rim of the width specified for the tire's size designation in Appendix A of § 571.109, shall comply with the following requirements of § 571.109:
 - (a) S4.1 (Size and construction).

- (b) S4.2.1 (General).
 (c) S4.2.2.3 (Tubeless tire resistance to
- bead unseating).
 (d) \$4.2.2.4 (Tire strength).
 (e) \$4.2.2.5 (Tire endurance)

- (f) S4.2.2.6 (High speed performance). S5.1.2 Except as specified in S5.1.3, each retreaded tire, when mounted on a test rim of the width specified for the tire's size designation in Appendix A of § 571.109, shall comply with the requirements of S4.2.2.2 of § 571.109, except that the section width shall be not less than 3 percent, nor more than 10 percent, of the section width specified for its size designation and type in Appendix A of § 57Ī.109.
- \$5.1.3 Each retreaded tire shall be capable of meeting the requirement of S5.1.1. and S5.1.2 when mounted on any rim in accordance with those sections. However, a particular tire need not meet further requirements after having been subjected to, and having met the requirements of, one of the following test groups:
- (a) The physical dimension (S5.1.2) bead unseating (S5.1.1(c)), and strength (S5.1.1(d)) tests; or
- (b) The endurance test (S5.1.1(e)):
- (c) The high speed performance test (\$5.1.1(f))
- S5.1.4 No retreaded tire shall have a recommended maximum load rating or maximum permissible inflation pressure that is greater than that originally specified on the casing pursuant to S4.3 of § 571.109, or specified for the casing in Figure 1.

S5.2 Casings.

- S5.2.1 No retreaded tire shall be manufactured with a casing-
- (a) On which bead wire or cord fabric is exposed before processing, or

- (b) On which bead wire or cord fabric, except for belt material, is exposed during processing.
- S5.2.2 No retreaded tire shall be manufactured with a casing—
- (a) From which a belt or ply, or part thereof, is removed during processing: or
- (b) On which a belt or ply, or part thereof, is added or replaced during processing.
- S5.2.3 Except as specified in S5.2.4, each retreaded tire shall be manufactured with a casing that has been labeled pursuant to S4.3 of § 571.109.
- \$5,2,4 Until January 1, 1974, a retreaded tire may be manufactured with a casing that is for use on rims having diameters of 14 or 15 inches, that has a size designation of either 6.45, 6.85, 6.95, 7.35, 7.75, 8.15, 8.25, 8.45, 8.55, 8.90, 9.00, or 9.15, and that has been permanently labeled on the sidewall with each of the following:
- (a) The generic name of the cord material used in the plies of the tire;
 - (b) The actual number of plies;
 - (c) The size of the tire; and
- (d) Whether the tire is tubeless or tube type.

S6. Certification and labeling.

S6.1 Except as specified in S6.2, each manufacturer of a retreaded tire shall certify that his product complies with this standard, pursuant to section 114 of the National Traffic and Motor Vehicle Safety Act of 1966, by labeling the tire with the symbol DOT in the location specified by § 574.5 of this chapter.

S6.2 From January 1, 1972, to February 29, 1972, inclusive, a manufacturer may certify compliance by affixing to the tread of the tire, in such a manner that it is not easily removable, a label that states in letters not less than three thirty-seconds of an inch high:

This retreaded tire was manufactured after January 1, 1972, and conforms to all appli-cable Federal motor vehicle safety standards.

S6.3 Permanent labeling.

S6.3.2 Each retreaded tire manufactured with a casing that has been labeled pursuant to \$4.3 of § 571.109 shall retain enough of its original labeling that each item of information required by § 571.109 is clearly legible in at least one location on the completed retreaded tire.

E6.3.2 Each retreaded tire manufactured with a casing that meets the requirements of S5.2.4 shall—

- (a) Retain enough of its original labeling that each item of information specified in S5.2.4 is clearly legible in at least one location on the completed retreaded
- (b) Be permanently labeled during the retreading process with its maximum permissible inflation pressure and maximum load rating as specified in Figure 1, in the location specified in § 574.5 of this chapter for the placement of the tire identification number, in letters not less than one-fourth of an inch high, in the following form:

Max. inflation __ ---p.s.1. Max. load____lbs.

Tire size	Plies							
	2 ply-4 ply (4 ply rating)		4 ply (6 ply rating)		4 ply (8 ply rating)

FIGURE 1

§ 571.118 Standard No. 118; Poweroperated window systems.

S1. Purpose and scope. This standard specifies requirements for power-operated window and partition systems to minimize the likelihood of death or injury from their accidental operation. S2. Application. This standard applies

to passenger cars and multipurpose pas-

senger vehicles.

- 83. Requirements. When the key that controls activation of the vehicle's engine is in an off position or is removed from the lock, no power-operated win-dow or partition shall be movable except-
- (a) By muscular force, unassisted by a power source within the vehicle; or
- (b) Upon activation by a key-locking system on the exterior of the vehicle.

§ 571.121 Standard No. 121; Air brake systems. (Effective Jan. 1, 1973)

S1. Scope. This standard establishes performance and equipment require-ments for braking systems on vehicles equipped with air brake systems.

S2. Purpose. The purpose of this standard is to insure safe braking performance under normal and emergency conditions.

83. Application. This standard applies trucks, buses, and trailers equipped with air brake systems.

S4. Definitions.

'Air bruke system" means a system that uses air as a medium for transmit. ting pressure or force from the driver control to the service brake, but does not include a system that uses compressed air or vacuum only to assist the driver in applying muscular force to hydraulic or mechanical components.

"Antilock system" means a portion of a service brake system that automatically controls the degree of wheel slip at one or more road wheels of the vehicle during braking.

"Gross axle weight rating" (GAWR) means the value specified by the vehicle
