

UNITED STATES PATENT AND TRADEMARK OFFICE
BEFORE THE PATENT TRIAL AND APPEAL BOARD

IPR2014-00580 and 726
Patent 6,896,773

**PATENT OWNER ZOND LLC'S
DEMONSTRATIVE EXHIBIT**

OBVIOUSNESS

Claims 1-20 and 34-40 Are Not Obvious Over Mozgrin
and Fortov

❖ Mozgrin and Fortov would not have taught:

“an ionization source that generates a weakly-ionized plasma from a feed gas proximate to the anode and the cathode assembly,” as recited in independent claim 1 and as similarly recited in independent claim 34

OBVIOUSNESS

Claims 1-20 and 34-40 Are Not Obvious Over Mozgrin and Fortov

- ❖ Petitioners relied on Mozgrin alone for this limitation. Mozgrin does not teach a weakly ionized plasma proximate to both the anode and the cathode asser

“For pre-ionization, we used a stationary magnetron discharge; the discharge current ranged up to 300 mA. We measured the discharge current-voltage characteristics in a 10^{-3} – 10 torr pressure range and plasma parameters at the discharge ***at the symmetry center of the shaped-electrode system*** using a probe technique. We found that only the regime with magnetic field strength not less than 400 G provided the initial plasma density in the 10^{10} – 10^{11} cm⁻³ range (Mozgrin at 401, right col, ¶ 2 (emphasis added)).

OBVIOUSNESS

Claims 1-20 and 34-40 Are Not Obvious Over Moz
and Fortov

OBVIOUSNESS

Claims 1-20 and 34-40 Are Not Obvious Over Mozgrin and Fortov

- ❖ Mozgrin does not teach a weakly ionized plasma proximate to both the anode and the cathode asser

As shown by Fig. 1(b) on the previous slide, the axis of symmetry (i.e., the place where Mozgrin measured the density of the plasma) is as far away from both the cathode (1) and anode (2) as it possibly can be while still being between the cathode and anode.

only the area at the perimeters of the anode and cathode along the r-axis of Fig. 1(b) reproduced above (i.e., high positive and negative values of r at $z = 0$) are close to both the anode and cathode. That is, the only area that is close to both the anode and cathode is not the area where Mozgrin measured the density of the plasma.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
