**PETITION FOR *INTER PARTES* REVIEW OF  
U.S. PATENT NO. 5,563,883**

Mail Stop PATENT BOARD  
Patent Trial and Appeal Board  
United States Patent and Trademark Office  
PO Box 1450  
Alexandria, Virginia 22313-1450  
*Submitted Electronically via the Patent Review Processing System*

## TABLE OF CONTENTS

PETITIONER’S EXHIBIT LIST .....	vi
I. INTRODUCTION .....	1
II. MANDATORY NOTICES – 37 C.F.R. § 42.8.....	1
A. Real Party-In-Interest Under 37 C.F.R. § 42.8(b)(1) .....	1
B. Related Matters Under 37 C.F.R. § 42.8(b)(2) .....	1
C. Lead and Back-Up Counsel Under 37 C.F.R. § 42.8(b)(3) .....	2
D. Service Information Under 37 C.F.R. § 42.8(b)(4).....	2
III. PAYMENT OF FEES – 37 C.F.R. § 42.103.....	2
IV. REQUIREMENTS FOR IPR – 37 C.F.R. § 42.104.....	3
A. Grounds for Standing Under 37 C.F.R. § 42.104(a) .....	3
B. Identification of Challenge Under 37 C.F.R. § 42.104(b) and Relief Requested.....	3
C. Claim Construction Under 37 C.F.R. §§ 42.100(b), 42.104(b)(3).....	5
1. Terms Construed In Prior Litigation.....	6
2. Construction of Claim 14.....	7
V. Summary AND TECHNICAL BACKGROUND of the ’883 Patent .....	11
B. Background: 1970’s to the Early 1990’s.....	11
C. The Alleged Invention of the ’883 Patent.....	15
VI. level of ordinary skill in the art .....	17
VII. DETAILED EXPLANATION UNDER 37 C.F.R. § 42.104(b).....	18
A. Summary of the Unpatentability Arguments Over the McNamara Patent and Other Prior Art References: Claims 1 and 3-4.....	18

B.	Ground 1: Claims 1 and 4 are Invalid Under 35 U.S.C. § 103(a) over McNamara in view of Rocci and the MetroNet Paper.....	18
1.	Claim 1 .....	19
a.	Preamble: “In a multiple access communication system comprising a central controller, a shared transmission means for signalling data and user information, and a plurality of remote terminals, a method of allocating signalling data channels between said central controller and said plurality of remote terminals from a plurality of communication channels and of assigning remote terminals . . . .” .....	19
b.	Limitation [A]: “establishing communications between said central controller and said plurality of remote terminals via a plurality of signalling data channels, each of said remote terminals being initially assigned to a pair of predetermined signalling data channels” .....	22
c.	Limitation [B]: “monitoring the status of a plurality of signalling data channels in use between said central controller and said plurality of remote terminals for the usability of said signalling data channels” .....	24
d.	Limitation [C]: “determining whether one of said plurality of remote terminals needs to be reassigned to a different signalling data channel other than said predetermined signalling data channel” .....	29
e.	Limitation [D]: “determining whether a different and suitable signalling data channel is available other than said predetermined channel.” .....	30
f.	Limitation [E]: “reassigning by said central controller said remote terminal to a different and suitable signalling data channel for communication henceforward.” .....	33
2.	Claim 4 .....	35

a.	Preamble: “In a multiple access communication system according to claim 1, said step of determining whether one of said plurality of remote terminals needs to be reassigned to a different signalling data channel other than said predetermined signalling data channel” .....	35
b.	Limitation [A]: “sensing the status of said predetermined signalling data channel which said terminal has been assigned to for overloading to determine whether said terminal needs to be reassigned to a different signalling data channel because of overloading” .....	36
c.	Limitation [B]: “sensing the status of said predetermined signalling data channel which said terminal has been assigned to for failure to determine whether said terminal needs to be reassigned to a different signalling data channel” .....	37
C.	Ground 2: Claim 3 is Invalid Under 35 U.S.C. § 103(a) Over McNamara, Rocci, and the MetroNet Paper as Applied To Claim 1, and Further in view of Zudnek, Dufresne, and Nagasawa.....	39
3.	Preamble: “In a multiple access communication system according to claim 1, said step of monitoring the status of a plurality of the signaling data channels in use between said central controller and said plurality of remote terminals for usability of said signaling data channels” .....	40
4.	Limitation [A]: “calculating the aggregate traffic load requirements of said plurality of signalling data channels in use” .....	40
5.	Limitation [B]: “monitoring the past collision count of said plurality of signalling data channels in use” .....	42
6.	Limitation [C]: “Monitoring the transmission error count of said plurality of signalling data channels in use” .....	45
7.	Limitation [D]: “sensing the status of said plurality of signalling data channels in use for failure” .....	47

8.	It would have Been Obvious to Modify McNamara to Provide for the “Monitoring” of the Claimed Parameters and “Sensing” For Failures .....	47
D.	Ground 3: Claim 14 is Invalid Under 35 U.S.C. § 103(a) Over Thompson in view of the Motorola 68360 Spec Sheet and Fultz.....	48
1.	Preamble: “In a multiple access communication system having a plurality of communication channels for communicating with a plurality of remote terminals, a central controller” .....	49
2.	Limitation [A]: “system controlling means for controlling the communication system comprising a micro-processor and associated EPROM and RAM” .....	50
3.	Limitation [B]: “transmitting means for transmitting user traffic or signalling data on said communication channels” .....	52
4.	Limitation [C]: “receiving means for receiving user traffic or signalling data on said communication channels” .....	52
5.	Limitation [D]: “modulating means for modulating signalling data” .....	53
6.	Limitation [E]: “demodulating means for demodulating signalling data” .....	55
7.	Limitation [F]: “interfacing means for interfacing to a wide area network” .....	56
8.	Limitation [G]: “switching means for making dynamic connections to switch signals among said transmitting means, said receiving means, said modulating means, said demodulating means, and said interfacing means” .....	56
9.	Limitation [H]: “forward communication controlling means for selecting a forward signalling data channel via a dynamic connection between said transmitting means and said modulating means” .....	57
VIII.	CONCLUSION.....	59

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
