## **I. INTRODUCTION**

Petitioner submits this response to Patent Owner Zond's Observations on Cross-Examination of Dr. Overzet, Paper No. 42 ("Observation"). Patent Owner presents eight observations on Dr. Overzet's testimony. While Petitioner believes that the testimony will be appropriately viewed and weighed by the Board, the specific observations presented by Patent Owner are irrelevant and mischaracterize the testimony of Dr. Overzet, as specified below, and therefore are not probative of any material issue before the Board.

## **II. RESPONSES TO OBSERVATIONS ON DR. OVERZET'S TESTIMONY**

### **A. Response to Observation 1**

Patent Owner contends that Dr. Overzet's testimony indicates that his field of expertise is inadequate to support Petitioner's positions with respect to "gas laser references" such as Kudryavtsev. Observation at 2. As a threshold matter, Patent Owner's observation is based on deposition testimony of Dr. Overzet taken by Patent Owner regarding U.S. Patent No. 7,147,759 in different IPR proceedings. Patent Owner is permitted to submit its motion for observations in those proceedings, not the instant ones.

Notwithstanding its threshold irrelevance, the cited testimony merely indicates that Dr. Overzet is not an expert in all aspects of "gas laser design." Deposition of Dr. Overzet re U.S. Patent No. 7,147,759 ("759 Depo. Tr.") at

107:6-8 (IPR2014-00781 Ex. 2012). On the other hand, Dr. Overzet testified that “I am an expert in the generation of plasma; furthermore all of the articles that we've gone through with respect to the '759 patent involve the generation of plasma.” *Id.* at 109:14-18 (IPR2014-00781 Ex. 2012). In other words, Dr. Overzet is an expert in the relevant field for the patent at issue and he applies his expert opinion when concluding that it would be obvious to combine references that pertain to plasma generation such as Kudryavtsev. *See* IPR2014-00781 Overzet Dec. at ¶¶ 55-59 (Ex. 1240).

Finally, Patent Owner's characterization of Kudryavtsev as a reference “directed to gas lasers” is an incorrect conclusion contrived only to attack Dr. Overzet's qualification as an expert purporting to testify about “gas laser design.” Observation at 2; '759 Depo. Tr. at 107:6-8 (IPR2014-00781 Ex. 2012). Kudryavtsev explicitly states that its model emerges from “the study of ionization relaxation in a plasma when the external electric field suddenly increases” and that the model is applicable “whenever a field is suddenly applied to a weakly ionized gas.”<sup>2</sup> Kudryavtsev at p. 30, left col., ¶ 1; p. 34, right col. final ¶ (IPR2014-00819 Ex. 1204). Thus, Kudryavtsev is directed to ionization relaxation mechanics which

---

<sup>2</sup> The general applicability of Kudryavtsev includes gas lasers, but is not limited to them. Kudryavtsev at p. 34, right col., last ¶ (“[The modeled effects] must be allowed for when studying emission mechanisms in pulsed gas lasers, gas breakdown, laser sparks, etc.”) (IPR2014-00819 Ex. 1204).

falls within Dr. Overzet's plasma generation expertise. As a result, Zond's limiting Kudryavtsev to application to gas lasers is an unsupported conclusion which is irrelevant to this proceeding.

### **B. Response to Observation 2**

Patent Owner contends that Dr. Overzet's testimony indicates that "the flow of gas [in Wang] is far from the strongly-ionized plasma at the upper end of the chamber" which supports Patent Owner's argument that the gas does not diffuse the strongly-ionized plasma to the extent that it allows additional power to be absorbed. Observation at 3. Patent Owner's observation draws a self-serving conclusion that has no support from the cited testimony.

The excerpt cited by Patent Owner merely shows that Dr. Overzet agrees with counsel for Patent Owner that: (1) gas enters Wang's system at the lower right, (2) Wang's system includes a vacuum system and a pumping port, and (3) the vacuum system pumps gas out of Wang's chamber at the pumping port location. Deposition Transcript of Dr. Overzet re U.S. Patent No. 6,853,142 ("142 Depo. Tr.") at 6:5-7:5 (Ex. 2012).

Nowhere in the cited testimony does Dr. Overzet opine on what the feed gas does after it is introduced in Wang's system and before it is pumped out by the vacuum system. Despite this, Patent Owner concludes that the testimony indicates that the feed gas flow is far from the strongly-ionized plasma. Observation at 3. In

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
