DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 5-10, 13, 14, 16, 19, 20, 22-31, 34, 37, 38 and 40-50 are rejected

under 35 U.S.C. 102(b) as being anticipated by Kouznetsov (WO 98/40532).

Kouznetsov teach in Fig. 2 a *magnetron sputtering* device. The sputtering device has a sputtering chamber 1 and a target 9. *The substrate 13 is attached to some electrically isolating support 15 at the end of a wall.* (Page 8 lines 29-37; Column 9 lines 1-6) *A magnet or magnets 17* are mounted so that the north pole or poles are arranged at the periphery of the target and the south pole or poles at the center of the target 9. *One electrode, the anode, is formed by the electrically conducting walls 5 of the housing 3, which e.g. can be grounded.* The other electrode, *the cathode, is formed by the target 9*, which is thus negatively biased in relation to the anode. The substrate 13 can have some neutral electric potential. A gas inlet for a suitable gas to be ionized such as argon is indicated at 21. (Page 9 lines 7-20) It should be noted that the anode and cathode always have a gap in order to create the plasma. (Applies to Applicant's claim 41)

When increasing the voltage form zero and on between the anode 5 and the cathode 9, there will for some applied voltage appear an electric glow discharge. *The*

Application/Control Number: 10/065,277 Art Unit: 1753

gas in the region between the anode and the cathode will be partly ionized by electrons. The *electrons* will be somewhat trapped or confined by the magnetic field primarily moving in the areas of low magnetic field intensity. (Page 9 lines 21-25) Inherently ground state atoms exist because the gas is not ionized initially. Electrons are needed to ionize in the partially ionized state and the fully ionized state discussed below. (Applies to Applicant's claims 42, 43, 46 and 48)

An electric discharge occurs between the cathode and the anode producing electrons trapped in the magnetic field by cooperation of the electric field produced by the applied voltage. (Page 4 lines 27-31)

When increasing the voltage and current more, there will appear the state comprising **completely ionized plasma region 27**, the region being stationary located above the surface of the target 9 and having a larger extension laterally, in the direction of the surface of the target 9 than the regions 23 of high electron and ion density used in ordinary sputtering. *This state is made possible by the arrangement of the electric and magnetic fields crossing each other in the magnetron* configuration. Furthermore, in this state, owing to the considerable extension and the relative homogeneity and uniformity of the ionized plasma in the region 27, *ions will hit the target surface more regularly and uniformly distributed over the surface. This will result in a more homogeneous wear of the target surface,* as illustrated by the area

delimited by the dashed line 29 in Fig. 5b. (Page 10 lines 13-23) The power source is a pulse generator used primarily to produce coatings by

sputtering. The power of each pulse can be in the range of 0.1 KW to 1 MW. **The**

Application/Control Number: 10/065,277 Art Unit: 1753

pulses can have a duration in the range of less than a hundred microseconds up to hundreds of microseconds and the intervals between pulses can range from milliseconds up to seconds. (Page 4 lines 14-23)

The voltage can be hundreds of volts up to several kilovolts. (Page 6 lines 24-25) The rise time is calculated form the time and voltage discussed above. (Applies to Applicant's claims 44, 45, 49 and 50)

The electric circuit will be generate at the frequency of the main supply typically with *a frequency of 50 or 60 Hz.* (Page 12 lines 14-15)

Alternating current is supplied from the power supply. (Page 6 lines 15-16)

Claims 1, 4, 5, 7, 13, 14, 16, 19-25, 27-29, 32, 33, 37 and 40 are rejected under 35 U.S.C. 102(b) as being anticipated by Mozgrin et al. "High Current Low-Pressure Quasi-Stationary Discharge in a Magnetic Field: Experimental Research", Plasma Physics Reports, Vol. 21, No. 5, 1995, pp. 400-409.

Mozgrin et al. teach a sputtering system as seen in Figure 1 having *a cathode* (1), *an anode* (2) and *a magnetic system* (3). (See Figure 1 pp. 401)

Figure 2 presents a simplified scheme of the *discharge supply system*. The supply unit involved *a pulsed discharge supply unit* and *a system for pre-ionization*. The *quasi-stationary* discharge supply unit consisted of a long line of W= 5.5 kJ maximal energy content, a switch and a matching unit. The pre-ionization system provided direct current. (Page 401)

A gas of argon is pre-ionized at a pre-ionized plasma density of

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
