er Gas charge Physics

is both a textbook for beginners and a handbook for specialists in plasma physics and gaseous electronics. The book contains useful data: results of experiments and calculations, and reference data. It provides a table of typical parameters and formulas suitable for computations. Discharges of all important types are considered: breakdown, glow, arc, spark and corona, radio frequency, microwave and laser discharges. The interaction between plasma ions and electrostatic and electromagnetic fields, low-temperature plasma applications, and applications to high-power lasers are treated in detail.

Preface

Gas discharges are of interest to physicists and engineers in a number of fields. Several decades ago excellent textbooks were written by von Engel and Steenbeck, Loeb, Brown, Kaptsov and several other authors. These books faithfully served many generations of students, and specialists still refer to them. Nevertheless, their usefulness does suffer from the time elapsed since publication: It is not that the material they present has become obsolete and irrelevant - this has happened to a very minor extent, if at all. Rather, the subject has greatly advanced both in scope and in depth, and its emphases have somewhat shifted. Of course, new books have been written, mostly monographs devoted to narrow branches of gas discharge physics. But these books are typically intended for the specialist and not so much for the novice in the field.

The need for a new textbook that is understandable to a beginner in gas discharge physics, and that conveys the right amount of information (even more important: information of the right kind) making it also useful to the specialist is apparent. With this in mind, our intention has been to produce a book that serves both as a textbook and a handbook.

From an immense amount of material we have selected, as best we could, the parts that are required for an understanding of the physics and those points that are most frequently needed in research. As a convenient and comprehensive volume, the book contains a maximum of useful data: experimental results, results of calculations, and reference data; formulas required for estimates have been reduced to a form suitable for computations.

This work was published in Russian in 1987 as a substantially larger volume. The English edition has been abridged at the expense of ancillary material concerning collisions, elementary processes, plasma radiation, plasma diagnostics, and other topics, though the chapters dealing with the central themes of discharge physics are retained in full, and even expanded by the addition of new data.

We have decided not to cover actual circuits, techniques, or methods (we will cover the ideas, though) of experiments and measurements; instead we concentrate on the physics of the processes of interest. Purely technical applications of gas discharges are not discussed for the same reason.

It would be impossible to give a comprehensive bibliography when covering such an immensely wide scope of topics; hence, original papers are cited only when recent results are discussed. In all other cases we refer to a book or review paper where more complete references are given.

Contents

The author is deeply grateful to Professors A. V. Eletsky and L. D. Tsendin, who read the Russian version of the manuscript, and Professor J. E. Allen, who read the English, for a number of useful comments. In addition, the author would like to thank the translator, Dr. V. I. Kisin, for a fruitful collaboration.

Yu. P. Raizer

Moscow, April 1991

1. Introduction	1
1.1 What Is the Subject of Gas Discharge Physics	1
1.2 Typical Discharges in a Constant Electric Field	1
1.3 Classification of Discharges	3
1.4 Brief History of Electric Discharge Research	4
1.5 Organization of the Book. Bibliography	6
2. Drift, Energy and Diffusion of Charged Particles in Constant Fields	8
2.1 Drift of Electrons in a Weakly Ionized Gas	8
2.2 Conduction of Ionized Gas	13
2.3 Electron Energy	14
2.4 Diffusion of Electrons	20
2.5 Ions	23
2.6 Ambipolar Diffusion	28
2.7 Electric Current in Plasma in the Presence of Longitudinal Gradients of Charge Density	30
2.8 Hydrodynamic Description of Electrons	33
3. Interaction of Electrons in an Ionized Gas with Oscillating Electric Field and Electromagnetic Waves	35
3.1 The Motion of Electrons in Oscillating Fields	35
3.2 Electron Energy	37
3.3 Basic Equations of Electrodynamics of Continuous Media	41
3.4 High-Frequency Conductivity and Dielectric Permittivity of Plasma	43
3.5 Propagation of Electromagnetic Waves in Plasmas	45
3.6 Total Reflection of Electromagnetic Waves from Plasma and Plasma Oscillations	49
4. Production and Decay of Charged Particles	52
4.1 Electron Impact Ionization in a Constant Field	52
4.2 Other Ionization Mechanisms	57
4.3 Bulk Recombination	60

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
