<u>**Response A**</u>

Dear Sir/Madam:

In response to the Office Action dated October 28, 2010, the Applicant submits the

following amendment and remarks.

Amendments to the Specification begin on page 2 of this paper.

Amendments to the Drawings begin on page 6 of this paper.

Amendments to the Claims are reflected in the listing of claims which begin on page 7 of this

paper.

Remarks begin on page 13 of this paper.

<u>AMENDMENTS TO THE SPECIFICATION</u>

The amendments to the specification indicated below are solely to correct obvious typographical errors.

Please replace the paragraph beginning on page 3, line 7 of the originally filed application with the following amended paragraph:

The above and other objects are achieved according to the present invention by providing a novel method, system and computer readable medium for providing a function item, such as a key, button, icon, or menu, tied to a user operation in a computer, whereby a single click on the function item in a window or program on a computer screen, or one single selection in a menu in a program, initiates retrieval of name and addresses and/or other person or company related information, [[w]] while the user works simultaneously in another program, e.g., a word processor. The click on the function item initiates a program connected to the button to search a database or file available on or through the computer, containing the person, company or address related data, in order to look up data corresponding to what the user types, or partly typed, e.g., name and/or address in the word processor, the correct data from the database, data related to the typed data, e.g., the name of the person, company, or the traditional or electronic address, or other person, or company, or address related data, and alternatively the persons, companies, or addresses, are displayed and possibly entered into the word processor, if such related data exists.

Please replace the paragraph beginning on page 7, line 8 of the originally filed application with the following amended paragraph:

In FIG. 1, after the user has inserted the address in the word processor, the user commands the button at step 2 and the program analyzes what the user has typed in the document at step 4. [[AT]] <u>At</u> step 6, the program decides what was found in the document and if the program found nothing in the document or what it found was un-interpretable the program goes to step 8 and outputs an appropriate message to the user and then quits at step 16. The program analyzes what the user has typed in the document at step 4, for example, by analyzing (i) paragraph/line separations/formatting, etc.; (ii) street, avenue, drive, lane, boulevard, city, state, zip code, country designators and abbreviations, etc.; (iii) Mr., Mrs., Sir, Madam, Jr., Sr. designators and abbreviations, etc.; (iv) Inc., Ltd., P.C., L.L.C, designators and abbreviations, etc.; and (v) a database of common male/female names, etc.
