CLERK US DISTRICT COURT
WESTERN DISTRICT OF TEXAS

IN THE UNITED STATES DISTRICT COURT
FOR THE WESTERN DISTRICT OF TEXAS
AUSTIN DIVISION

CROSSROAD SYSTEMS, INC.

Plaintiff,

v.

3PAR, INC.,
AMERICAN MEGATRENDS, INC.,
RORKE DATA, INC.,
D-LINK SYSTEMS, INC.,
CHELSIO COMMUNICATIONS, INC. (a
Delaware corporation).
ISTOR NETWORKS, INC., and
CHELSIO COMMUNICATIONS, INC. (a
California corporation)

Defendants.

Case No. 1:10-CV-652-SS

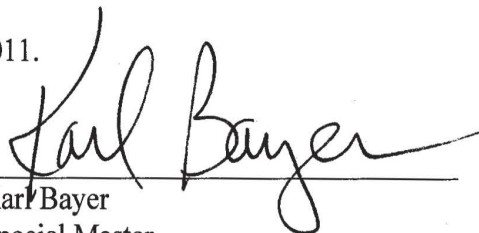

DEPUTY

**REPORT AND RECOMMENDATIONS OF THE SPECIAL MASTER
REGARDING UNITED STATES PATENT NO.'S 7,051,147 & 6,425,035 B2**

Attached hereto is the Special Master's Report and Recommendations to United States District Judge Sam Sparks regarding the construction of claims in United States Patent No.'s 7,051,147 & 6,425,035 B2.

The parties may file written objections to the recommendations made in this report within ten (10) days from the date of their receipt of it, as discussed at the conclusion of the *Markman* hearing.

SIGNED this the 9th day of August, 2011.

Karl Bayer
Special Master

CROSSROADS EXHIBIT 2008
Oracle Corp. et al v Crossroads Systems, Inc
IPR2014-01209

CERTIFICATE OF SERVICE

I hereby certify that on the 9th day of August, 2011, I electronically filed the foregoing with the Clerk of Court using the CM/ECF system which will send notification of such filing to counsel of record in this action.

/s/ Karl Bayer
Karl Bayer

SPECIAL MASTER'S RECOMMENDED CONSTRUCTIONS
PATENT NO. 6,425,035 B2

| Term | Special Master's Recommended Construction |
|--|---|
| Device | No Construction Necessary. |
| Implement access controls for storage space on the storage devices. | "Provides controls which limit a device's access to a specific subset of storage devices or sections of a single storage device according to a map." |
| Allow access from devices...to the storage devices using native low level, block protocol. | "Permit or deny access using the NLLBP of the Virtual Local Storage without involving a translation from high level network protocols or file system protocols to a native low level block protocol request." |
| Native low level block protocol (NLLBP) | "A set of rules or standards that enable computers to exchange information and do not involve the overhead of high level protocols and file systems typically required by network servers." |
| Workstation | "A computer having input/output devices intended for use by humans." |
| Access control(s) | "Controls which limit a device's access to a specific subset of storage devices or sections of a single storage device according to a map." |

Special Master's Proposed Construction of Disputed Terms

| Actual Claims Language | Crossroads' Proposed Construction | Crossroads' Evidence | Defendants' Proposed Construction | Defendants' Evidence | Special Master's Construction |
|--|---|---|-----------------------------------|--|-------------------------------|
| United States Patent No. 6,425,035 B2 | | | | | |
| Claim 1: | | | | | |
| A storage router for providing virtual local storage on remote storage devices to devices , comprising: | Device: "Computing device that issues storage access requests." | Device: Intrinsic: Claim 1, ¹ Col. 9, ll. 27-30 ("devices" refers to the devices that make requests and are allowed access to storage devices). Col. 1, ll. 36-37; Col. 2, ll. 4-5; Col. 4, ll. 55-56; Col. 8, ll. 65-68 (the specification describes the devices that make requests to access the storage devices as "computing devices"). Col. 1, ll. 57-60 ("from the perspective of a workstation, or other computing device, seeking to access such server data, the access is much slower than access to data on a local storage device"). | Device: Computer. | Intrinsic Evidence 1:37-39 ² , 47-49, 57-60 4:29-33 ("Storage router 56 combines access control with routing such that each workstation 58 has controlled access to only the specified partition of storage device 62 which forms virtual local storage for the workstation 58.") 4:39-40 4:58-59 ("no access from a workstation 58 is allowed to the virtual local storage of another workstation." <i>Cf.</i> Fig. 2 and Fig. 3 -- First Reexam Reply ³ at 8-9, 15 -- | No Construction Necessary. |

¹ United States Patent No. 6,425,035 ("the '035 Patent") and United States Patent No. 7,051,147 ("the '147 Patent") share a common specification. To facilitate cross-referencing, unless noted otherwise, all Col:Line cites in the charts of proposed claim constructions are to the '035 Patent.

² As in the claim construction briefs previously submitted to the Court, all specification citations are to the '035 patent unless otherwise noted.

³ For the sake of clarity, commonly cited documents are referenced in the "Defendants' Evidence" column by the abbreviated names used in prior briefing. A table of these abbreviations was included in Defendant's Reply Post-Hearing Brief and is also appended to this table.

SPECIAL MASTER'S RECOMMENDED CONSTRUCTIONS
PATENT NO. 7,051,147

| Term | Special Master's Recommended Construction |
|---|---|
| | |
| Device | No Construction Necessary. |
| Configuration | No Construction Necessary. |
| Access control(s) | "Controls which limit a device's access to a specific subset of storage devices or sections of a single storage device according to a map." |
| Allow access ...to the remote storage devices using native low level, block protocol. | "Permit or deny access using the NLLBP of the Virtual Local Storage without involving a translation from high level network protocols or file system protocols to a native low level block protocol request." |
| Initiator Device | "A device that issues requests for data or storage." |
| Native low level block protocol (NLLBP) | "A set of rules or standards that enable computers to exchange information and do not involve the overhead of high level protocols and file systems typically required by network servers." |
| Workstation | "A computer having input/output devices intended for use by humans." |
| Control Access | "To limit a device's access to a specific subset of storage devices or sections of a single storage device according to a map." |

|---|---|---|-------------------------------------|--|-----------------------------------|
| United States Patent No. 7,051,147 | | | | | |
| Claim 1: | | | | | |
| <p>A storage router for providing virtual local storage on remote storage devices to a device, comprising: a buffer providing memory work space for the storage router; a first Fibre Channel controller operable to connect to and interface with a first Fibre Channel transport medium;</p> | <p>Device: "Computing device that issues storage access requests."</p> | <p>Device: Intrinsic: Claim 1,¹ Col. 9, ll. 27-30 ("devices" refers to the devices that make requests and are allowed access to storage devices). Col. 1, ll. 36-37; Col. 2, ll. 4-5; Col. 4, ll. 55-56; Col. 8, ll. 65-68 (the specification describes the devices that make requests to access the storage devices as "computing devices"). Col. 1, ll. 57-60 ("from the perspective of a workstation, or other computing device, seeking to access such server data, the access is much slower than access to data on a local storage device"). Claim 3, Col. 9, ll. 37-39</p> | <p>Device: Computer.</p> | <p><i>See '035 patent, claim 1.</i> ²</p> | <p>No Construction Necessary.</p> |

125 of 373

Case 1:10-cv-00652-SS Document 167-7 Filed 08/10/11 Page 2 of 20

¹ United States Patent No. 6,425,035 ("the '035 Patent") and United States Patent No. 7,051,147 ("the '147 Patent") share a common specification. To facilitate cross-referencing, unless noted otherwise, all Col:Line cites in the charts of proposed claim constructions are to the '035 Patent.

² For this and other claim terms common to both the '035 and '147 patents, the parties have not identified any evidentiary issues that are different between the two patents. Therefore, for the sake of brevity and clarity, Defendants avoid repetition of issues addressed in detail in the '035 chart.
