

EZ-USB

Quotes from the electronics engineering press

Fran Granville, *EDN Magazine*, March 2, 1998

“...changes the course of USB enumeration procedure”

“...simplifies software updates ... a feature that can be important in a new interface such as USB.”

“...supports postage-stamp-sized designs.”

Electronic Products, March 1998

“...integrates all of the electronics required between a USB port and the electronic and mechanical devices making up the peripheral.”

“...retains flexibility for changes in the USB spec...”

Multimedia Systems, April 1998

“... reduces the cost and complexity of developing high-speed USB peripheral equipment.”

EE Product News, May 1998

“for the first time an avenue for developing soft, downloadable configurations and for decreasing the number of components required to implement USB designs.”

EDN, May 21, 1998

“Because enumeration/renumeration simplifies software updates to peripherals, it can be an important features as USB evolves.”

“...also simplifies the interface to multifunction peripherals...”

Tom Cantrell, *Circuit Celler INK*, June 1998

“...a good example of the way new blood keeps the '51 young at heart.”

“...the best aspects of other derivatives in a unique combination.”

“Renumeration provides a neat chameleon-like capability.”
