B.	Construction of Relevant Claim Terms	75
1.	“streamer positioning device”	76
2.	“control system”	77
3.	“feather angle mode”	78
4.	“turn control mode”	81
5.	“streamer separation mode”	83
6.	“attempting to maximize distance between adjacent streamers”	89
7.	“a control system configured to use a control mode selected from a feather angle mode, a turn control mode, a streamer separation mode, and two or more of these modes” (Claim 18)	90
C.	The Feather Angle Mode Claims (Claims 3, 5, 20, and 22) of the ’520 Patent are Obvious over Workman	93
1.	Claims 18 and 19	94
a.	“An apparatus comprising: (a) an array of streamers each having a plurality of streamer positioning devices there along;”	94
b.	“(b) a control system configured to use a control mode” “wherein the control mode is the feather angle mode, and the controlling comprises the control system attempting to keep each streamer in a straight line offset from a towing direction by a feather angle”	96
1)	Workman Discloses a Control System	97
2)	It would have been obvious to configure Workman’s control system to use a feather angle mode that “comprises the control system attempting to keep each streamer in a straight line offset from the towing direction by a feather angle”	98
2.	Motivation 1: Maintaining Data Quality	104
