, you said is a noise inter-	
8 (Attached to transcript) 8 <b>A Yes.</b>	
9 DEPOSITION EXHIBIT PAGE 9 Q And by filtering noise, the Kalman	filter
Exhibit 1084 Sketch drawn by the witness 451 10 provides an estimate of the variable in ques	tion, for
Exhibit 1085 Manual of Offshore Surveying for 11 example, location?	
Geoscientists and Engineers 457 12 A It provides an estimate. It can b	e
Exhibit 1086 Drawing 500 13 location or it can be something, whatever	r.
Exhibit 1087 Article from E&P, March 2011 516 24 Q Whatever the variable is, it provide	s an
Exhibit 1088 Article "Cable Positioning with 15 estimate of the actual location.	
16 IRMA" 621 16 A The estimate of an estimate.	
17 Q The estimate of the actual location	if
18 the Kalman filter is working on locations.	
19 A Yes. In the generalized sense of	
20 <b>estimate.</b>	
21 Q Now, how does one term whether t	he Kalman
22 filter is being used for A, B or C?	
428	430
1 PROCEEDINGS 1 A The major distinguishing feature is	the
2 model that is used for the Kalman filter. So	
MICHAEL S. TRIANTAFYLLOU, Sc.D,  3 model-based prediction, you are using a mo	del which
4 having been previously duly sworn, was 4 has been based on some physical laws, whet	her simple
5 examined and testified as follows: 5 <b>or complicated. That's how you derive the</b> 1	Kalman
6 FURTHER EXAMINATION BY COUNSEL FOR PETITIONER 6 <b>filter structure.</b>	
7 BY MR. BERL: 7 In the case of the filter, it it still	
8 Q Good morning, Doctor. 8 <b>can be a model-based, just to clean the noise</b>	e. Or it
9 A Good morning. 9 may be something that you concoct just to r	emove the
10 Q We were discussing yesterday your 10 <b>noise.</b>	
declaration, paragraph 137, the uses of Kalman 21 Q So the model in B and C is taking according	ount
12 filters. If you could turn back to that. 12 in this context of SPD locations for physical for	rces
13 A You are talking about my declaration? 13 that act upon the SPDs.	
Q Yes. Paragraph 137. It should be on the 14 A It can be a variety of things. So, it	
top. 15 depends on the sophistication of the user.	
16 A Oh, yes. 16 Q But in order for it to be a model that is	
2 Dut in order for it to be a moder that is	nysical
17 Q Paragraph 137. Do you recall yesterday 17 based on physical laws, it would account for pl	
Q Paragraph 137. Do you recall yesterday 17 based on physical laws, it would account for ph	es.
Q Paragraph 137. Do you recall yesterday  17 based on physical laws, it would account for pl  18 at the end of the day we discussed A, B and C in  18 forces on the SPD locations.	es.
17 Q Paragraph 137. Do you recall yesterday 18 at the end of the day we discussed A, B and C in 19 paragraph 137 where you say: "Kalman filters can be 17 based on physical laws, it would account for plants of the same of the SPD locations. 18 forces on the SPD locations. 19 A It doesn't necessarily have to be forces.	

#### DEPOSITION OF MICHAEL S. TRIANTAFYLLOU, Sc.D, VOLUME 2 CONDUCTED ON SATURDAY, MAY 23, 2015

3 (Pages 431 to 434)

	431		433
1	model is. Okay.	1	So the modeling part allows you a very
2	Q And you're now distinguishing a model	2	wide latitude of what to do.
3	from a behavior predictive model.	3	Q If you use a Kalman filter with a model,
4	A No. It always always models will be	4	then you can have the output as either the same units
5	models; they will be approximations.	5	or different units than the inputs.
6	Q What is the difference between a model	6	A You may. Depending on the model you're
7	and a behavior predictive model?	7	using.
8	A A behavior-based model let's leave	8	Q But we're well, let's turn to Workman
9	outside the word "prediction" which can be the	9	again. I think it's right there marked as 1004,
10	subsequent step. But a model based on behavior is	10	next to you no, right there.
11	you use some laws, whether it's physical or chemical	11	You know that Workman discloses the use
12	or whatever laws, to derive at whatever the model.	12	of a Kalman filter, correct?
13	That model can be simple or it can be very	13	A Correct.
14	complicated. It depends on what you approximate. So	14	Q Let's go to that area of Workman. It's
15	there is no cut and dry to say the model has to be so	15	in column 3. And it's also, if you would like to
16	sophisticated or less sophisticated. There will	16	look at Figure 2, obviously you are free to do that.
17	always be an approximation.	17	That shows what the numbers mean graphically.
18	Q It depends in part on the complexity of	18	It says: "The network solution system,
19	the system that is being modeled.	19	10, implements a Kalman filter solution"
20	A Exactly.	20	A Okay, let me get there. Where are you?
21	Q And if the Kalman filter is being used as	21	Q Oh, sorry. Line 46.
22	a filter to remove noise, I take it that the output	22	A Line 46. "Typically."
	432		434
1	of the Kalman filter is in the same unit of	1	Q Yes. It says: "Typically the network
2	measurement as the inputs. In other words, if	2	solution system, 10, implements a Kalman filter
3	now, let's use the example of predicting or of	3	solution on the signals it receives from the vessel
4	using a Kalman filter for SPD locations. If	4	positioning system, 20, and location sensing devices,
5	filtering is going on, then the Kalman filter would	5	15."
6	output an estimate of the SPD locations based on the	6	Do you see that?
7	input of the measurements of SPD locations, right?	7	A Yes.
8	A It depends. That's what you are	8	Q So that explains when a Kalman filter is
9	saying in the pure filtering sense, yes, that's	9	used in Workman, right?
10	that's what you may mean for it usually that's	10	A Yes.
11	what you will mean for filter, that you put certain	11	Q Okay. And it explains which signals or
12 13	units in and you get certain units out, but it can be	12	measurements go into the Workman Kalman filter,
14	different too. It all depends on what to the degree that you are using a model and to the degree	13 14	right? A Yes.
15	to which you are using a filter.	15	Q And the inputs into the network solution
16	Q And if you are using a model, then the	16	system are the locations and the vessel positioning
17	units can change.	17	system, correct?
18	A Yes. You can go from forces to	18	A That's what it says. From the vessel
19	displacements. But also you can use they can be	19	positioning system, the signals it receives from the
20	in the same units too because someone may model	20	vessel positioning system and location sensing
21	motion of a location of the streamer and get motion	21	devices.
22	in another point.	22	Q And the vessel positioning system, among

		_	4 (Lages 455 to 450
	435		437
1	other information, can provide the velocity of the	1	column 3.
2	system, correct?	2	A It will use the latest signals it has.
3	A Where do you see that?	3	That's the interpretation here when you say "the
4	Q Well, no, I'm just asking you. The	4	position."
5	vessel positioning system can provide information	5	Q But those signals are not identified as
6	about the velocity, correct?	6	realtime in that sentence, correct?
7	A I have to to remember whether that's	7	A They must be realtime. I mean it's a
8	part of the system or not.	8	system that works realtime.
9	Q Well	9	Q Well, does that sentence, column 3, lines
10	A Are you saying you can derive it from the	10	46 through 48, identify the signals being received
11	position, the velocity?	11	from the location sensing devices as realtime
12	Q The vessel positioning system information	12	signals?
13	can be used to obtain information about the velocity	13	MR. KIKLIS: Objection. Asked and
14	of the vessel, correct?	14	answered.
15	A The velocity you are talking about the	15	THE WITNESS: In the absence of a device
16	vessel itself, the ship.	16	that will store them, we have to assume that, yes,
17	Q Yes.	17	they are realtime.
18	A So some sensing device that can	18	BY MR. BERL:
19	provide the ship. So if the ship has a sensing, you	19	Q It doesn't say that they are realtime,
20	can sense its velocity, yes.	20	does it?
21	Q And the streamers are towed by or	21	A It does not specify whether they would be
22	attached to the ship, correct?	22	stored, so in the absence of storing, the signals
	436		438
1	436 <b>A Ves</b>	1	can't stay in thin air. It would have to have a
1 2	A Yes.	1 2	can't stay in thin air. It would have to have a
2	<ul><li>A Yes.</li><li>Q And the location measurements that are</li></ul>	2	can't stay in thin air. It would have to have a separate system to somehow store them if they are not
2	<ul><li>A Yes.</li><li>Q And the location measurements that are</li><li>the inputs into the Kalman filter in the sentence we</li></ul>	2 3	can't stay in thin air. It would have to have a separate system to somehow store them if they are not realtime.
2 3 4	A Yes.  Q And the location measurements that are the inputs into the Kalman filter in the sentence we just read, column 3, lines 36 through 48, are not	2 3 4	can't stay in thin air. It would have to have a separate system to somehow store them if they are not realtime.  Q Now, let's maybe look at column 2. That
2 3 4 5	A Yes.  Q And the location measurements that are the inputs into the Kalman filter in the sentence we just read, column 3, lines 36 through 48, are not described as realtime location measurements, correct?	2 3 4 5	can't stay in thin air. It would have to have a separate system to somehow store them if they are not realtime.  Q Now, let's maybe look at column 2. That can perhaps help us. If we look at the paragraph
2 3 4 5 6	A Yes.  Q And the location measurements that are the inputs into the Kalman filter in the sentence we just read, column 3, lines 36 through 48, are not described as realtime location measurements, correct?  A Can you specify what you mean by	2 3 4 5 6	can't stay in thin air. It would have to have a separate system to somehow store them if they are not realtime.  Q Now, let's maybe look at column 2. That can perhaps help us. If we look at the paragraph that begins on line 10 of column 2. Do you see that
2 3 4 5 6 7	A Yes. Q And the location measurements that are the inputs into the Kalman filter in the sentence we just read, column 3, lines 36 through 48, are not described as realtime location measurements, correct? A Can you specify what you mean by "realtime location measurements"?	2 3 4 5 6 7	can't stay in thin air. It would have to have a separate system to somehow store them if they are not realtime. 2 3 4 5 6 7 8	A Yes.  Q And the location measurements that are the inputs into the Kalman filter in the sentence we just read, column 3, lines 36 through 48, are not described as realtime location measurements, correct?  A Can you specify what you mean by "realtime location measurements"?  Q Well, it doesn't identify the measurements in the sentence we just read about the	2 3 4 5 6 7 8	can't stay in thin air. It would have to have a separate system to somehow store them if they are not realtime.  Q Now, let's maybe look at column 2. That can perhaps help us. If we look at the paragraph that begins on line 10 of column 2. Do you see that it says: "Location sensing devices and methods for determining the positions of the seismic sources and seismic streamer cables are also well known in the
2 3 4 5 6 7 8 9	A Yes.  Q And the location measurements that are the inputs into the Kalman filter in the sentence we just read, column 3, lines 36 through 48, are not described as realtime location measurements, correct?  A Can you specify what you mean by "realtime location measurements"?  Q Well, it doesn't identify the measurements in the sentence we just read about the inputs into the Kalman filter as realtime	2 3 4 5 6 7 8 9	can't stay in thin air. It would have to have a separate system to somehow store them if they are not realtime.  Q Now, let's maybe look at column 2. That can perhaps help us. If we look at the paragraph that begins on line 10 of column 2. Do you see that it says: "Location sensing devices and methods for determining the positions of the seismic sources and seismic streamer cables are also well known in the art"?
2 3 4 5 6 7 8 9 10	A Yes.  Q And the location measurements that are the inputs into the Kalman filter in the sentence we just read, column 3, lines 36 through 48, are not described as realtime location measurements, correct?  A Can you specify what you mean by "realtime location measurements"?  Q Well, it doesn't identify the measurements in the sentence we just read about the inputs into the Kalman filter as realtime measurements, right?	2 3 4 5 6 7 8 9 10	can't stay in thin air. It would have to have a separate system to somehow store them if they are not realtime.  Q Now, let's maybe look at column 2. That can perhaps help us. If we look at the paragraph that begins on line 10 of column 2. Do you see that it says: "Location sensing devices and methods for determining the positions of the seismic sources and seismic streamer cables are also well known in the art"?  Do you see that?
2 3 4 5 6 7 8 9 10 11	A Yes. Q And the location measurements that are the inputs into the Kalman filter in the sentence we just read, column 3, lines 36 through 48, are not described as realtime location measurements, correct? A Can you specify what you mean by "realtime location measurements"? Q Well, it doesn't identify the measurements in the sentence we just read about the inputs into the Kalman filter as realtime measurements, right? A Realtime versus something that was done a	2 3 4 5 6 7 8 9 10 11	can't stay in thin air. It would have to have a separate system to somehow store them if they are not realtime.  Q Now, let's maybe look at column 2. That can perhaps help us. If we look at the paragraph that begins on line 10 of column 2. Do you see that it says: "Location sensing devices and methods for determining the positions of the seismic sources and seismic streamer cables are also well known in the art"?  Do you see that?  A I see that.
2 3 4 5 6 7 8 9 10 11 12	A Yes.  Q And the location measurements that are the inputs into the Kalman filter in the sentence we just read, column 3, lines 36 through 48, are not described as realtime location measurements, correct?  A Can you specify what you mean by "realtime location measurements"?  Q Well, it doesn't identify the measurements in the sentence we just read about the inputs into the Kalman filter as realtime measurements, right?  A Realtime versus something that was done a year ago?	2 3 4 5 6 7 8 9 10 11 12	can't stay in thin air. It would have to have a separate system to somehow store them if they are not realtime.  Q Now, let's maybe look at column 2. That can perhaps help us. If we look at the paragraph that begins on line 10 of column 2. Do you see that it says: "Location sensing devices and methods for determining the positions of the seismic sources and seismic streamer cables are also well known in the art"?  Do you see that?  A I see that.  Q And you agree with that?
2 3 4 5 6 7 8 9 10 11 12 13	A Yes.  Q And the location measurements that are the inputs into the Kalman filter in the sentence we just read, column 3, lines 36 through 48, are not described as realtime location measurements, correct?  A Can you specify what you mean by "realtime location measurements"?  Q Well, it doesn't identify the measurements in the sentence we just read about the inputs into the Kalman filter as realtime measurements, right?  A Realtime versus something that was done a year ago?  Q Something that's not realtime.	2 3 4 5 6 7 8 9 10 11 12 13	can't stay in thin air. It would have to have a separate system to somehow store them if they are not realtime.  Q Now, let's maybe look at column 2. That can perhaps help us. If we look at the paragraph that begins on line 10 of column 2. Do you see that it says: "Location sensing devices and methods for determining the positions of the seismic sources and seismic streamer cables are also well known in the art"?  Do you see that?  A I see that.  Q And you agree with that?  A It depends on what location sensing
2 3 4 5 6 7 8 9 10 11 12 13 14 15	A Yes. Q And the location measurements that are the inputs into the Kalman filter in the sentence we just read, column 3, lines 36 through 48, are not described as realtime location measurements, correct? A Can you specify what you mean by "realtime location measurements"? Q Well, it doesn't identify the measurements in the sentence we just read about the inputs into the Kalman filter as realtime measurements, right? A Realtime versus something that was done a year ago? Q Something that's not realtime. A Well, if they were measured sometime	2 3 4 5 6 7 8 9 10 11 12 13 14 15	can't stay in thin air. It would have to have a separate system to somehow store them if they are not realtime.  Q Now, let's maybe look at column 2. That can perhaps help us. If we look at the paragraph that begins on line 10 of column 2. Do you see that it says: "Location sensing devices and methods for determining the positions of the seismic sources and seismic streamer cables are also well known in the art"?  Do you see that?  A I see that.  Q And you agree with that?  A It depends on what location sensing devices and methods for determining means, whether
2 3 4 5 6 7 8 9 10 11 12 13 14 15	A Yes.  Q And the location measurements that are the inputs into the Kalman filter in the sentence we just read, column 3, lines 36 through 48, are not described as realtime location measurements, correct?  A Can you specify what you mean by "realtime location measurements"?  Q Well, it doesn't identify the measurements in the sentence we just read about the inputs into the Kalman filter as realtime measurements, right?  A Realtime versus something that was done a year ago?  Q Something that's not realtime.  A Well, if they were measured sometime earlier, yes. But it doesn't it doesn't say	2 3 4 5 6 7 8 9 10 11 12 13 14 15	can't stay in thin air. It would have to have a separate system to somehow store them if they are not realtime.  Q Now, let's maybe look at column 2. That can perhaps help us. If we look at the paragraph that begins on line 10 of column 2. Do you see that it says: "Location sensing devices and methods for determining the positions of the seismic sources and seismic streamer cables are also well known in the art"?  Do you see that?  A I see that.  Q And you agree with that?  A It depends on what location sensing devices and methods for determining means, whether these were to locate the they were used for
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	A Yes.  Q And the location measurements that are the inputs into the Kalman filter in the sentence we just read, column 3, lines 36 through 48, are not described as realtime location measurements, correct?  A Can you specify what you mean by "realtime location measurements"?  Q Well, it doesn't identify the measurements in the sentence we just read about the inputs into the Kalman filter as realtime measurements, right?  A Realtime versus something that was done a year ago?  Q Something that's not realtime.  A Well, if they were measured sometime earlier, yes. But it doesn't it doesn't say anything about the history of such signals, if that's	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	can't stay in thin air. It would have to have a separate system to somehow store them if they are not realtime.  Q Now, let's maybe look at column 2. That can perhaps help us. If we look at the paragraph that begins on line 10 of column 2. Do you see that it says: "Location sensing devices and methods for determining the positions of the seismic sources and seismic streamer cables are also well known in the art"?  Do you see that?  A I see that.  Q And you agree with that?  A It depends on what location sensing devices and methods for determining means, whether these were to locate the they were used for locating the hydrophones for the purposes of knowing
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	A Yes.  Q And the location measurements that are the inputs into the Kalman filter in the sentence we just read, column 3, lines 36 through 48, are not described as realtime location measurements, correct?  A Can you specify what you mean by "realtime location measurements"?  Q Well, it doesn't identify the measurements in the sentence we just read about the inputs into the Kalman filter as realtime measurements, right?  A Realtime versus something that was done a year ago?  Q Something that's not realtime.  A Well, if they were measured sometime earlier, yes. But it doesn't it doesn't say anything about the history of such signals, if that's what you are asking.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	can't stay in thin air. It would have to have a separate system to somehow store them if they are not realtime.  Q Now, let's maybe look at column 2. That can perhaps help us. If we look at the paragraph that begins on line 10 of column 2. Do you see that it says: "Location sensing devices and methods for determining the positions of the seismic sources and seismic streamer cables are also well known in the art"?  Do you see that?  A I see that.  Q And you agree with that?  A It depends on what location sensing devices and methods for determining means, whether these were to locate the they were used for locating the hydrophones for the purposes of knowing where the streamers were. Specifically location
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	A Yes. # Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## **Real-Time Litigation Alerts**

Keep your litigation team up-to-date with **real-time** alerts and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

### **Advanced Docket Research**

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

### **Analytics At Your Fingertips**

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

#### API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

#### **LAW FIRMS**

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

#### **FINANCIAL INSTITUTIONS**

Litigation and bankruptcy checks for companies and debtors.

#### **E-DISCOVERY AND LEGAL VENDORS**

Sync your system to PACER to automate legal marketing.
