PATENT
Attorney Docket No.: ZON-003

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

APPLICANT:	Roman Chistyakov		
SERIAL NO.:	10/065,739	GROUP NO.:	1753
FILING DATE:	November 14, 2002	EXAMINER:	McDonald, Rodney G.
TITLE:	HIGH DEPOSITION RATE SPUTTERING		

Commissioner for Patents
Alexandria, Virginia 22313-1450

AMENDMENT AND RESPONSE

Sir:

The following amendments and remarks are responsive to the Office Action mailed on May 20, 2004 in the above-identified patent application. Entry and consideration of the following amendments and remarks, and allowance of the claims, as presented, are respectfully requested. A Petition for a two-month extension of time, up to and including October 20, 2004 is submitted herewith. The Commissioner is hereby authorized to charge the extension fee, additional claims fee, and any other proper fees to Attorney's Deposit Account No. 501211.

Please note that a Supplemental Information Disclosure Statement was filed for this case on July 2, 2004 citing references found in an International Search Report for the corresponding PCT application.

Please enter the following amendments and consider the remarks that follow.

Amendments to the Claims:

Please amend claims 1, 4, 5, 6, 8, 12, 16, 19, 20, 21, 25, and 27-30, cancel claims 3 and 18 without prejudice, and add claims 31-42 as follows.

1. (currently amended) A sputtering source comprising:

a cathode assembly that is positioned adjacent to an anode, the cathode assembly including a sputtering target;

an ionization source that generates a weakly-ionized plasma from a feed gas proximate to the anode and the cathode assembly; and

a power supply that generates a voltage pulse ~~that produces an electric field~~ between the anode and the cathode assembly~~, the electric field~~ that creates ~~ing~~ a strongly-ionized plasma from the weakly-ionized plasma, an amplitude and a rise time of the voltage pulse being chosen to increase ~~the strongly-ionized plasma comprising a volume~~ a density of ions in the strongly-ionized plasma ~~that impact the sputtering target which~~ enough to generate sufficient thermal energy in the sputtering target to cause a sputtering yield ~~of the sputtering target~~ to be non-linearly related to a temperature of the sputtering target.

2. (original) The sputtering source of claim 1 wherein the electric field comprises a quasi-static electric field.

3. (cancelled).

4. (currently amended) The sputtering source of claim ~~3~~ 1 further comprising a gas flow controller ~~exchange means for exchanging~~ that controls a flow of the feed gas so that the feed gas diffuses the ~~with a new volume of feed gas while applying the electrical pulse across the new volume of feed gas to generate additional~~ strongly-ionized plasma.~~; comprising a second plurality of ions, the second plurality of the additional power creating additional ions that impacting the surface of the sputtering target, thereby generating additional thermal energy in the sputtering target.~~

5. (currently amended) The sputtering source of claim ~~3~~ 4 wherein ~~further comprising a gas~~ the feed gas allows additional power to be absorbed by the strongly ionized plasma, thereby generating additional thermal energy in the sputtering target. ~~exchange means for~~

~~exchanging the weakly-ionized plasma. with a new volume of feed gas while applying the electrical pulse across the new volume of feed gas.~~

6. (currently amended) The sputtering source of claim 1 wherein the thermal energy generated ~~by the first plurality of ions that impact~~ in the sputtering target does not substantially increase an average temperature of the sputtering target.

7. (original) The sputtering source of claim 1 further comprising a magnet that is positioned to generate a magnetic field proximate to the weakly-ionized plasma, the magnetic field substantially trapping electrons in the weakly-ionized plasma proximate to the sputtering target.

8. (currently amended) The sputtering source of claim 1 wherein the voltage pulse generated between the anode and the cathode assembly ~~electrical field across the weakly-ionized plasma~~ excites atoms in the weakly-ionized plasma and generates secondary electrons from the cathode assembly, the secondary electrons ionizing the excited atoms, thereby creating the strongly-ionized plasma.

9. (original) The sputtering source of claim 1 wherein the power supply generates a constant power.

10. (original) The sputtering source of claim 1 wherein the power supply generates a constant voltage.

11. (original) The sputtering source of claim 1 wherein the ionization source is chosen from the group comprising an electrode coupled to a DC power supply, an electrode coupled to an AC power supply, a UV source, an X-ray source, an electron beam source, an ion beam source, an inductively coupled plasma source, a capacitively coupled plasma source, and a microwave plasma source.

12. (currently amended) The sputtering source of claim 1 wherein a rise time of the ~~electric field~~ voltage pulse is chosen to increase an ionization rate of the strongly-ionized plasma.

13. (original) The sputtering source of claim 1 wherein the weakly-ionized plasma reduces the probability of developing an electrical breakdown condition between the anode and the cathode assembly.

14. (original) The sputtering source of claim 1 wherein the strongly-ionized plasma is

substantially uniform proximate to the cathode assembly.

15. (original) The sputtering source of claim 1 wherein a distance between the anode and the cathode assembly is chosen to increase an ionization rate of strongly-ionized plasma.

16. (currently amended) A method for high deposition rate sputtering, the method comprising:

ionizing a feed gas to generate a weakly-ionized plasma proximate to a cathode assembly that comprises a sputtering target; and

applying a voltage pulse to the cathode assembly to generate ~~generating~~ a strongly-ionized plasma from the weakly-ionized plasma, an amplitude and a rise time of the voltage pulse being chosen so that ions in the strongly-ionized plasma ~~comprising a plurality of ions positioned proximate to a sputtering target; and~~

~~impacting the sputtering target with the plurality of ions to~~ generate sufficient thermal energy in the sputtering target to cause a sputtering yield ~~of the sputtering target~~ to be non-linearly related to a temperature of the sputtering target, thereby increasing a deposition rate of the sputtering.

17. (original) The method of claim 16 further comprising generating a magnetic field proximate to the sputtering target, the magnetic field trapping electrons proximate to the sputtering target.

18. (cancelled).

19. (currently amended) The method of claim ~~18~~ 16 wherein the ~~electric field~~ voltage pulse applied to the cathode assembly generates excited atoms in the weakly-ionized plasma and generates secondary electrons from the sputtering target, the secondary electrons ionizing the excited atoms, thereby creating the strongly-ionized plasma.

20. (currently amended) The method of claim 16 further comprising ~~exchanging a volume of~~ diffusing the weakly-ionized plasma with a volume of the feed gas while ionizing the volume of the feed gas to create ~~an~~ additional ~~volume of the~~ weakly-ionized plasma.

21. (currently amended) The method of claim 16 further comprising ~~exchanging a volume of~~ diffusing the strongly-ionized plasma with a volume of the feed gas while applying the

voltage pulse to the cathode assembly~~, generating~~ to generate ~~an~~ additional ~~volume of the~~ strongly-ionized plasma from the volume of the feed gas.

22. (original) The method of claim 16 wherein the peak plasma density of the weakly-ionized plasma is less than about 10^{12} cm^{-3}.

23. (original) The method of claim 16 wherein the weakly-ionized plasma reduces the probability of developing an electrical breakdown condition.

24. (original) The method of claim 16 wherein the ionizing the feed gas comprises exposing the feed gas to one of a static electric field, an AC electric field, a quasi-static electric field, a pulsed electric field, UV radiation, X-ray radiation, an electron beam, and an ion beam.

25. (currently amended) The method of claim 16 wherein the ~~impacting the sputtering target with the plurality of~~ ions in the strongly-ionized plasma causes at least a portion of a surface layer of the sputtering target to evaporate.

26. (original) The method of claim 16 wherein the peak plasma density of the strongly-ionized plasma is greater than about 10^{12} cm^{-3}.

27. (currently amended) A sputtering source comprising:

a cathode assembly that is positioned adjacent to an anode, the cathode assembly including a sputtering target;

an ionization source that generates a weakly-ionized plasma from a feed gas ~~from a first volume of feed gas that is located~~ proximate to the anode and the cathode assembly;

a power supply that generates a voltage pulse ~~that produces an electric field~~ between the anode and the cathode assembly that creates a strongly-ionized plasma from the weakly-ionized plasma, an amplitude and a rise time of the voltage pulse being chosen to increase a density of ions in the strongly-ionized plasma enough to generate sufficient thermal energy in the sputtering target to cause a sputtering yield to be non-linearly related to a temperature of the sputtering target ~~comprising a first plurality of ions~~; and

a gas controller ~~for exchanging~~ that controls a flow of the feed gas to the strongly-ionized plasma to facilitate the creation of additional ions ~~with a second volume of feed gas while~~

DOCKET ALARM

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.

WHAT WILL YOU BUILD? | sales@docketalarm.com | 1-866-77-FASTCASE

fastcase®
Smarter legal research.
