1999 IMA Summer Program:
Codes, Systems and Graphical Models

yong

Schedule // Participants // Bibliographic Items Related to Week 1 // Bibliographic Items Related to Week 2 // Material from Talks

Partially supported by the National Security Agency

August 2-13, 1999

Organizers:

G. David Forney, Jr.
Massachusetts Institute of Technology
LUSE27@email.mot.com
forney@lids.mit.edu

Brian Marcus
IBM Almaden Research Center
marcus@almaden.ibm.com

Joachim Rosenthal
University of Notre Dame
rosen@nd.edu

Alexander Vardy
University of California, San Diego
vardy@ece.ucsd.edu

Note: The registration for this summer workshop has been closed due to an overwhelming response.

The invention of turbo codes and other capacity-approaching codes has led to an exciting cross-fertilization of ideas between researchers from different backgrounds.

The aim of the workshop is to bring together mathematicians, computer scientists, and electrical engineers in the area of coding theory, systems theory and symbolic dynamics so that the techniques from one area can be applied to problems in the other area. The two weeks of the workshop will be subdivided into two main focus areas:

Week 1:
Codes on Graphs and Iterative Decoding
Week 2:
Connections Among Coding Theory, System Theory and Symbolic Dynamics

Week 1

CODES ON GRAPHS AND ITERATIVE DECODING

Belief propagation in Bayesian networks has been extensively studied in artificial intelligence since the work of Pearl a decade ago, and turbo codes have recently become a subject of much research in coding theory. In the past year or two it has been recognized that the iterative decoding algorithm used for turbo codes and other capacity-approaching schemes are instances of belief propagation. This has led to an explosion of work devoted to understanding and exploiting this connection. A related problem is that of representing a given code by a graph, such as a Bayesian network. A central impetus of much of this work is to understand why iterative algorithms work so well empirically on graphs with cycles, where practically no theoretical results are known. Experts in the dynamics of algorithms have also begun to be drawn into this work. The major focus of week 1 of the IMA workshop will be to bring together researchers in these various fields to better understand these emerging connections. This will be a natural follow-on to a special session on this subject at the upcoming 1998 MTNS conference (Mathematical Theory of Networks and Systems, among the most mathematical of the systems theory conferences).

Topics for week 1 include: Codes defined on graphs, iterative decoding algorithms, factor graphs, turbo codes, connections with Bayesian networks.

Week 2

CONNECTIONS AMONG CODING THEORY, SYSTEM THEORY AND SYMBOLIC DYNAMICS

Coding Theory, System Theory and Symbolic Dynamics have much in common as evidenced by the following list of research topics that play a prominent role in each:

1. Construction of various types of finite- and finite-dimensional state representations of sequence spaces.
2. Investigation of fundamental structural properties of sequence spaces, such as observability and controllability.
3. Construction of input/output systems, i.e. mappings (or encoders) between sequence spaces.
4. Understanding the special role that algebraic structure (in particular, linearity and duality) plays in 1,2 and 3.

Yet these subjects have developed somewhat independently, and each has its own language and points of view. Until recently there has been very little communication among researchers in these subjects. A main purpose of week 2 of the IMA workshop is to further the communication among researchers and stimulate connections among these subjects. Week 2 will aim to continue a successful series of interdisciplinary meetings that has included an IEEE Information Theory Workshop on Coding, Systems and Symbolic Dynamics in 1993 (Mansfield, MA), a special invited session at the IEEE Conference on Decision and Control in 1995 (New Orleans), and two special sessions at the MTNS in 1998 (Padova).

Topics for week 2 include: Behavioral system theory, input/output mappings between spaces of sequences, state space representations, group codes, trellis codes, multi-dimensional systems and codes.

The organizers plan a number of invited tutorial lectures specifically for interspecialty communication. Leading workers in each field will also be invited to present surveys of current research, with less emphasis on solved problems than on open ones. Finally, there will be both invited and contributed papers presenting recent research results.

We expect the attendees to represent electrical engineering, mathematics and computer science departments in both academia and industry. As coding theory is the glue that holds the two weeks together, we expect that it will mostly be a subset of the coding theory participants who will attend both weeks.

WORKSHOP SCHEDULE

Week 1: August 2-6, 1999 Monday Tuesday Wednesday Thursday Friday

Week 2: August 9-13, 1999 Monday Tuesday Wednesday Thursday Friday

All talks are in Lecture Hall EE/CS 3-180 unless otherwise noted.

WEEK 1: CODES ON GRAPHS AND ITERATIVE DECODING
August 2-6, 1999

SCHEDULE for MONDAY, AUGUST 2

HISTORY AND TUTORIALS Day
G. David Forney, Jr. (chair)

8:30 am	Registration and Coffee	Reception Room EE/CS 3-176
9:10 am	**Willard Miller, Fred Dulles, and G. David Forney**	Introduction and Welcome
9:30 - 10:30 am	**R. Michael Tanner** University of California-Santa Cruz	Error-Correcting Codes and Graph-based Algorithms: Origins, Successes, the Current Quests
10:30 am	Coffee Break	Reception Room EE/CS 3-176
11:00 am - 12:00 pm	**Stephen B. Wicker** Cornell University	Markov Chains, Error Control, and the Advent of Turbo Coding
12:00 pm	Lunch	
2:00-3:00 pm	**Frank R. Kschischang** University of Toronto	Factor Graphs and the Sum-Product Algorithm
4:00 pm	IMA Tea	IMA East, 400 Lind Hall A variety of appetizers and beverages will be served.

SCHEDULE for TUESDAY, AUGUST 3

LOW DENSITY PARITY CHECK CODES DAY
R. Michael Tanner (chair)

9:15 am	Coffee	Reception Room EE/CS 3-176

9:30-10:30 am	**David J.C. MacKay** Cambridge University	Sparse Graph Codes
10:30 am	Coffee Break	Reception Room EE/CS 3-176
11:00 am - 12:00 pm	**Robert J. McEliece** California Institute of Technology	Some Simple Codes that Are Good in Both Theory and Practice
12:00 pm	Lunch	
2:00 - 3:00 pm	**Thomas J. Richardson** (Lucent Bell Labs) **Ruediger Urbanke** (Lucent Bell Labs)	Analysis and Design of Iterative Decoding Systems
3:00 pm	Coffee Break	Reception Room EE/CS 3-176

Contributed Talks and Informal Discussions

3:30 pm	**Amin Shokrollahi** Bell Labs	Capacity Achieving Low-density Erasure Codes
4:00 pm	**Gilles Zemor** ENST, Paris	Iterative Decoding of Cycle Codes of Graphs
4:30 pm	**Dakshi Agrawal** University of Illinois-Urbana Champaign	On the Phase Trajectories of the Turbo Decoding Algorithm

SCHEDULE for WEDNESDAY, AUGUST 4

INFERENCE DAY
Brendan J. Frey (chair)

9:15 am	Coffee	Reception Room EE/CS 3-176
9:30 - 10:30 am	**Tommi Jaakkola** Massachusetts Institute of Technology	Variational Methods for Inference
10:30 am	Coffee Break	Reception Room EE/CS 3-176
11:00 am - 12:00 pm	**Radford M. Neal** University of Toronto	Sparse Matrix Methods and Probabilistic Inference Algorithms
12:00 pm	Lunch	
2:00 - 3:00 pm	**Brendan J. Frey** University of Waterloo **Yair Weiss** University of California at Berkeley	The Sum-Product Algorithm in Gaussian Networks with Cycles
3:00 am	Coffee Break	Reception Room EE/CS 3-176

Contributed Talks and Informal Discussions

3:30 pm	**John B. Anderson** University of Lund	Properties of the Tailbiting BCJR Decoder
4:00 pm	**Amir Banihashemi** Carleton University	Tanner Graphs for Group Block Codes and Lattices: Construction and Complexity
4:30 pm	**Heeralal Janwa and Oscar Moreno** University of Puerto Rico	New Constructions of Ramanujan Graphs and Good Expander Graphs from Codes, Exponential Sums and Sequences

SCHEDULE for THURSDAY, AUGUST 5

Robert J. McEliece (chair)

9:15 am	Coffee	Reception Room EE/CS 3-176
9:30 - 10:30 am	**Randall E. Bryant** Carnegie Mellon University	Symbolic Boolean Manipulation with Ordered Binary Decision Diagrams
10:30 am	Coffee Break	Reception Room EE/CS 3-176
11:00 am - 12:00 pm	**John Lafferty** Carnegie Mellon University	Trellises, Decision Diagrams, and Factor Graphs
12:00 pm	Lunch	
2:00 - 3:00 pm	**James L. Massey** ETH Zurich and Lund University	Linear Systems over Fields and Rings, Linear Complexity, and Fourier Transforms
3:00 am	Coffee Break	Reception Room EE/CS 3-176
6:00 pm	**Workshop Dinner**	**Bona Vietnamese Restaurant** Located near the IMA and the Day's Inn at 802 Washington Avenue, the south side of Washington very near the

		intersection of Washington and Oak St. Phone: 612-331-5011

SCHEDULE for FRIDAY, AUGUST 6

CODING THEORY DAY Alexander Vardy (chair)

8:45 am	Coffee	Reception Room EE/CS 3-176
9:00 - 10:00 am	**G. David Forney, Jr.** Massachusetts Institute of Technology	Codes and Systems on Graphs: Generalized State Realizations
10:00 am	Coffee Break	Reception Room EE/CS 3-176
10:15 - 11:15 am	**Ralf Koetter** University of Illinois at Urbana-Champaign	Factor Graphs, Trellis Formations, and Generalized State Realizations
11:15 am	Coffee Break	Reception Room EE/CS 3-176
11:30 am	**Hans-Andrea Loeliger** Endora Tech AG, Switzerland	Decoding and Equalization: Iterative Algorithms and Analog Networks

Week 1: August 2-6, 1999 Monday Tuesday Wednesday Thursday Friday

Week 2: August 9-13, 1999 Monday Tuesday Wednesday Thursday Friday

All talks are in Lecture Hall EE/CS 3-180 unless otherwise noted.

WEEK 2: CONNECTIONS AMONG CODING THEORY, SYSTEM THEORY AND SYMBOLIC DYNAMICS
August 9-13, 1999

SCHEDULE for MONDAY, AUGUST 9

8:30 am	Registration and Coffee	Reception Room EE/CS 3-176
9:10 am	**Willard Miller, Fred Dulles, Joachim Rosenthal, and Brian Marcus**	Introduction and Welcome

Automata and Systems
Jorn Justesen (Chair)

9:30 am	**Roger W. Brockett** Harvard University	Dynamical Systems and their Associated Automata
10:30 am	Coffee Break	Reception Room EE/CS 3-176
11:00 am - 12:00 pm	**Dominique Perrin** Université de Marne-la-Vallée	Symbolic Dynamics and Automata

Algebra and Geometry Applied to Systems
Ethan Coven (Chair)

1:30 pm	**Paul A. Fuhrmann** Ben Gurion University	A Polynomial Module Approach to Linear Systems Theory
2:30 pm	**Clyde Martin** Texas Tech University	Linear Systems as Vector Bundles on Spheres
3:30 pm	Coffee Break	Reception Room EE/CS 3-176
4:00 pm	**M.S. Ravi** Eastern Carolina University	An Algebraic Geometric Point of View to Linear Systems Theory
5:00 pm	IMA Tea	IMA East, 400 Lind Hall A variety of appetizers and beverages will be served.

SCHEDULE for TUESDAY, AUGUST 10

8:45 am	Coffee	Reception Room EE/CS 3-176

Convolutional Codes
Karl Petersen (Chair)

9:00 am	**Rolf Johannesson** University of Lund	Woven Convolutional Codes: Encoder Properties and Error Exponents
10:00 am	**Roxana Smarandache** University of Notre Dame	Construction of Convolutional Codes with Large Free Distance
11:00 am	Coffee Break	Reception Room EE/CS 3-176
11:30 am	**Fabio Fagnani** Politecnico di Torino Joint talk with **Sandro Zampieri** Universita di Padova	On Convolutional Codes over Rings

Contributed Talks
Joachim Rosenthal (Chair)

All talks will be 25 minutes long, including questions.

2:00 pm	**Thomas Mittelholzer** IBM Zurich Research Laboratory	Duals over Artinian Rings and the MacWilliams Identity
2:30 pm	**Sergio R. Lopez-Permouth** Ohio University	Finite Fields, Permutations and Trellis
3:00 pm	Coffee Break	Reception Room EE/CS 3-176
3:30 pm	**Danrun Huang** St. Cloud State	Period Three, Chaos, and the Golden Mean Shift
4:00 pm	**Dharmendra S. Modha** IBM Almaden Research Center	Art of Constructing Low-complexity Encoders/Decoders for Constrained Block Codes
4:30 pm	**Natasha Jonoska** University of South Florida	On Encoding in DNA Words

SCHEDULE for WEDNESDAY, AUGUST 11

8:45 am	Coffee	Reception Room EE/CS 3-176

Multidimensional Systems
Jon Hall (Chair)

9:00 am	**Klaus Schmidt** University of Vienna	Multi-dimensional Symbolic Dynamical Systems
10:00 am	**Paul H. Siegel** University of California-San Diego	Capacity of Constrained Systems in One and Two Dimensions
11:00 am	Coffee Break	Reception Room EE/CS 3-176
11:30 am	**Paul A. Weiner** Saint Mary's University of Minnesota	Multidimensional Convolutional Codes

Systems Theory
Roy Adler (Chair)

2:00 pm	**Jan C. Willems** University of Groningen	Systems, States and their Representations
3:00 pm	Coffee Break	Reception Room EE/CS 3-176
3:30 pm	**Sanjoy Mitter** MIT	Path Space View of Probabilistic Systems

SCHEDULE for THURSDAY, AUGUST 12

8:45 am	Coffee	Reception Room EE/CS 3-176

Symbolic Dynamics and Applications
Uwe Helmke (Chair)

9:00 am	**M. Michael Boyle** University of Maryland	Applications of Symbolic Dynamics to the Structure Theory of Nonnegative Matrices
10:00 am	**Natasha Jonoska** University of South Florida	Multiplicities of SFT Covers
11:30 am	**Selim Tuncel** University of Washington	Codings of Markov Chains and Weighted Graphs

Contributed Talks
Brian Marcus (Chair)

2:00 pm	**Marie-Pierre Béal** Université de Marne-la-Vallée	A Finite State Version of the Kraft-McMillan Theorem
2:30 pm	**Olivier Carton** Université de Marne-la-Vallée	Asynchronous Sliding Block Maps
3:00 pm	Coffee Break	Reception Room EE/CS 3-176
3:30 pm	**Christiane Frougny** LIAFA	Deterministic Synchronization of Bounded Delay 2-tape Finite Automata
4:00-4:30 pm	**Michael E. O'Sullivan** University College Cork	The Key Equation for One-point Codes
4:30 - 5:00 pm	**Fernando Guzmán** Binghamton University	Ambiguity in Codes
6:00 pm	**Workshop Dinner**	**Campus club** Located on the 4th floor of Coffman Student Union and serves a wide-ranging buffet. Coffman Union is located on the opposite side of Washington Avenue from the IMA and slightly to the west.

DOCKET ALARM

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS
Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS
Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS
Sync your system to PACER to automate legal marketing.
